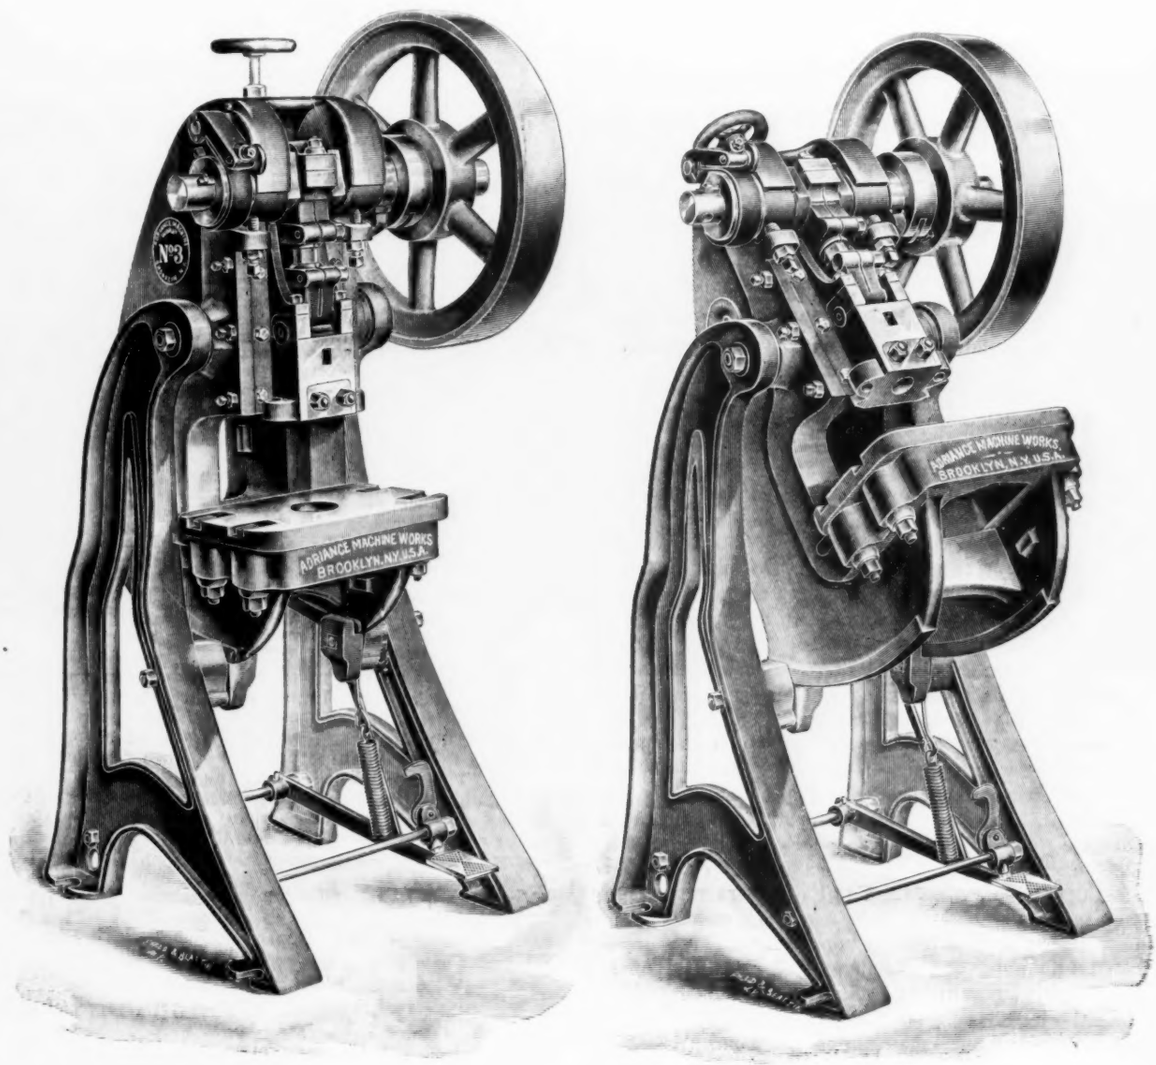
49 CLIFF ST., NEW YORK.

THE IRON AGE.

THURSDAY, MARCH 30, 1899.

The Adriance Inclinable Open Back Press.

The illustrations show a new design of the well-known type of open back adjustable power press—a style of press that has always been in favor and appreciated by the trade because of its wide range of usefulness in operating with dies upon sheet metals and wire. It is built by the Adriance Machine Works of 124 Imlay street, Brooklyn, N. Y., and is being protected by patents. The cuts represent the press in both of its positions—inclined and vertical—and plainly show the method of obtaining the adjustment and the "straight line" construction of its frame. This firm have been building this type of press for several years, and because they have always contended that the "straight line" principle of construction was the one necessary to the greatest strength and rigidity they have from the beginning of their practice as press builders used it in the design of their press frames. There are many new features and structural changes embodied in the press illustrated.



THE ADRIANCE INCLINABLE OPEN BACK PRESS.

Its new features are its clutch and its connection to the treadle. The clutch has been the weakest and most hard usage, because it must instantly start the crank shaft with all of its appendages and while under the resistance of the shaft brake, from a state of rest to the speed at which the fly wheel is revolving. In doing this the clutching parts are subjected to a hard blow, and it would seem to be obvious that these parts, in order to successfully withstand this hardship, must not only be properly proportioned but must be engaged or interlocked to their full depth before striking, as that is their strongest position. If the clutching parts are released just at the moment when the flying part is about to pass the stationary one the parts do not have time to fully interlock, which results in the breaking, chipping and wearing off of the engaging corners and edges of these parts, bringing about their rapid destruction and necessitating their early and frequent replacement. The peculiar mechanism of the clutch used on this press so times the release of the clutching parts that they fully engage before striking, and they cannot by any possibility be released when they are near to or passing each other, resulting in what is claimed to be a decided nov-

elty- an almost indestructible clutch. In other respects the clutch is noiseless, simple, strong, effective, durable, easily repaired, quick acting and locks both ways. It is connected to the treadle by a rod having the joint pins made a part of itself, and at the treadle end the treadle spring is hooked to the joint pin on the side of the treadle opposite to the rod, thus acting as its keeper and making it impossible for these parts to become disconnected so as to falsely release the latch, engage the clutch, start the press, and perhaps injure the operator. This treadle rod is also free from joints or connections between its extremities that may become loose and therefore dangerous and that would require adjusting every time the press was changed inclinably.

The brake is a local one, inasmuch as its action is not continuous during the whole revolution of the crank shaft, but is applied only after the crank has passed the lower center—immediately after, if a heavy underspring is being used, and later if the press is being used on work that does not require the use of this spring with its strong upward impulse. The tension of the brake is easily and quickly changed, and the whole construction is simple and can be maintained economically. The treadle is supplied with a device that serves to hold it down for continuous running and to lock it up so that it cannot be accidentally tripped while setting dies with the fly wheel running. The fly wheel is provided with an outwardly extended flange capable of being easily gripped by the hand to facilitate the turning of the crank shaft back and forth in setting dies while the power is off the wheel.

The knock out is the device for clearing the work from the punches. It is placed behind the plunger and is a vertically sliding steel bar with its lower end bent to project forwardly into a recess in the plunger over the punches, and the plunger has an opening in its front side through which the end of the knock out and its relation to the punch stems can be clearly seen so as to facilitate the setting of the knock out. This is done by manipulating a screw placed over its slide, the hand wheel of which is seen at the top of the press. This construction gives a knock out that in all adjustments presses squarely upon the punch stem, that can be quickly and positively set without danger to itself or to the dies, and which does not require the die setter to go behind the press to guess how much he must adjust it.

The plunger has long bearings which are thoroughly bedded into the press frame and one side of which is rigid with the frame and the other side of which is gibbed. The joint between the wrist and the plunger extends the whole width of the latter, which gives unusually large wearing surface. The punch stem hole is irregular in shape, so that it will firmly hold punch stems that are "off" in size, that are out of round or cracked. The punches are held by a cap clamped up by two hardened double length nuts working on steel studs. To adjust the press inclinably it is necessary to loosen three nuts, push the press into the opposite position, and again tighten the nuts. The press is pivoted in its legs through its center of gravity, and a boy can easily do the job with the heaviest press. These presses are built in six sizes, ranging in weight from 500 to 4000 pounds.

One of the largest rudders that has ever been cast in the world has just been finished by the Pennsylvania Steel Casting Company of Chester, Pa., for the American Line steamship "Rhynland," now at Cramp's shipyard in Philadelphia undergoing repairs. The rudder, which was cast in a solid piece, weighs over 13,000 pounds, and the stern post, which was cast at the same time, weighs 9000 pounds. Heretofore rudders have been cast in two pieces and afterward riveted together into a solid piece.

Two hundred laborers employed in the plate mill of the La Belle Iron Works, Wheeling, W. Va., were notified of a 10 per cent. increase in wages, to take effect on April 15.

Reports are current that the Pennsylvania Steel Company are working on a plan of financing their affairs to provide for working capital.

The Production of Open Hearth Steel.

The American Iron and Steel Association has just issued the following statistics of the production of open hearth steel, ingots and castings:

The production of open hearth steel in 1898 was 2,220,492 gross tons, against 1,608,671 tons in 1897, an increase of 611,821 tons, or over 38 per cent. The following table shows the production of open hearth steel ingots and direct castings by States during the past four years in gross tons:

States—Gross tons.	1895.	1896.	1897.	1898.
New England	36,733	48,055	51,402	47,381
New York and New Jersey	32,203	32,120	39,521	47,957
Pennsylvania	904,352	1,009,608	1,271,751	1,817,521
Ohio	75,637	64,691	78,357	79,886
Illinois	49,500	101,832	120,609	173,103
Other States	38,757	42,394	47,031	54,644
Totals	1,137,182	1,298,700	1,608,671	2,220,492

The open hearth steel made in 1898 was produced by 65 works in 13 States—Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Kentucky, Alabama, Ohio, Indiana, Illinois, Wisconsin, Missouri and California.

Of the total production in 1898 1,559,412 tons were made by the basic process and 661,080 tons by the acid process. In 1897 the production by the basic process amounted to 1,056,043 tons and by the acid process to 552,628 tons:

States—Gross tons.	Basic open hearth steel.	Acid open hearth steel.	Total Gross tons.
New England	9,466	37,915	47,381
New York and New Jersey	13,024	34,933	47,957
Pennsylvania	1,321,308	496,213	1,817,521
Ohio	43,650	36,231	79,886
Illinois	143,891	29,212	173,103
Other States	28,073	26,571	54,644
Totals	1,559,412	661,080	2,220,492

The total production of open hearth direct steel castings in 1898 amounted to 110,787 gross tons, of which 18,460 tons were made by the basic process and 92,327 tons were made by the acid process. The following table gives the production of open hearth steel castings by the acid and basic processes in 1898 by States:

States—Gross tons.	Acid castings.	Basic castings.	Total.
Massachusetts, Connecticut, New York and New Jersey	14,657	.....	14,657
Pennsylvania	45,712	1,558	47,270
Ohio and Indiana	19,669	150	19,819
Illinois, Wisconsin, Missouri and California	12,289	16,752	29,041
Totals	92,327	18,460	110,787

Our total production of open hearth steel ingots and castings has almost doubled since 1895, when we made 1,137,182 tons.

The New England Electric Vehicle & Transportation Company were incorporated on March 24, at Trenton, N. J. The capital is $25,000,000. The company are authorized to manufacture appliances for operating vehicles and to manufacture and operate vehicles themselves. The incorporators are James E. Hayes, Camden, N. J., and Arthur Phillips and Augustus Treadwell, Jr., of New York. The new company are said to be a subcompany of the Electric Vehicle Company, and intend to operate in New England, particularly in Boston. It is understood that they will devote more attention to freight than to passenger business, thus using trucks rather than cabs. The $25,000,000 of stock is all common and was issued at $5 a share, subject to a further possible assessment of $5 June 1.

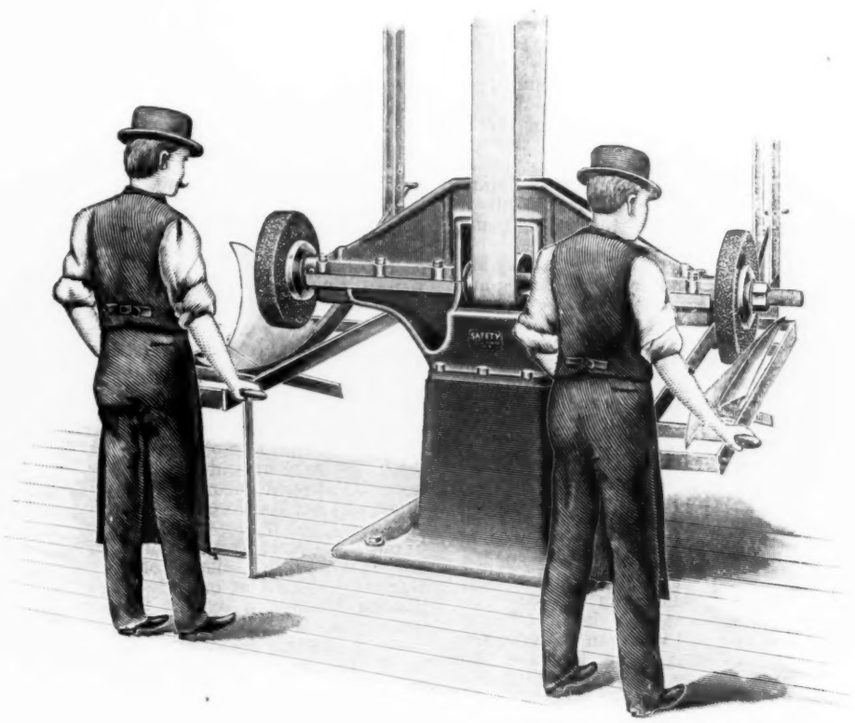
The Pressed Steel Car Company, Pittsburgh, Pa., have received an order from the Dominion Coal Company of Boston for 50 steel cars of 100,000 pounds capacity each. Also a contract for 1000 steel cars from the Lehigh Valley Railroad, and a further contract from the Chicago, Lake Shore & Eastern Railroad for 150 steel freight cars, and for 50 cars for the Lake Superior & Ishpeming Railroad. Active work has been commenced on the new works to be erected by the Pressed Steel Car Company, at McKee's Rocks, Pittsburgh. It is hoped to have the new plant ready to turn out cars not later than September 1. It is probable a bridge will be constructed across the Ohio River, connecting the present works in Lower Allegheny with the new works at McKee's Rocks.

A fine record was made last year by the Union Station in Chicago, where, 7,500,000 passengers were handled without an accident, and $50,000,000 worth of baggage without the loss of a single piece. In respect of baggage it is further recorded that this is the third successive year in which no claim has been made for lost baggage of any kind.

Machine for Grinding Plows, Etc.

A machine built by the Safety Emery Wheel Company of Springfield, Ohio, is designed principally for grinding plows, cultivator shovels and other agricultural implements where a smooth, bright surface is required. The old way of grinding was usually with a wet grindstone from 4 to 6 feet in diameter and 6 to 12 inches face, and was done by placing the work on a cradle and grinding from the under side; or a spring board was used and the work held in the hands and by the knees of the workman. As grindstones are uneven in hardness, having hard and soft spots, the stones soon get out of round and require truing up. While this truing up is being done a cloud of grindstone dust fills the room and is inhaled by the workmen. This soon tells on the health of the strongest men; so much so that a regular grinder's life is usually found to last only from 8 to 12 years when constantly employed at that work.

In the new method of grinding with a solid emery wheel all the dust is removed by exhaust fans. As the wheels are even and can be made of any degree of hardness the work requires they need very little truing up or dressing. It has also been found that usually a solid emery wheel weighing 100 pounds will do more work than a grindstone weighing a ton, so that the saving from the expense of handling them is considerable. The machine illustrated is quite heavy, weighing about 1800 pounds, and has the top part made truss or diamond shape, to insure rigidity. The bearings are long and a spindle 2¼ inches in diameter runs in self oiling boxes. The emery or polishing wheel has plenty of distance between the wheel and sides of the machine in order not to interfere with the work or the cradle used for holding the work. The machine is made of such hight as not to require the workman to be in a stooping position while working at it.



MACHINE FOR GRINDING PLOWS, ETC.

Steel Girders Burned by an Electric Arc.

An interesting useful application of electric arc burning, says the *Western Electrician*, recently took place in Chicago in connection with reconstruction work in the New York Life Building. The contractors for the building, the Moulton Starrett Company of Chicago, were engaged in remodeling a portion of the building to suit a new tenant. To provide for two new stairways from the main floor of the building to the basement it was found that it would be necessary to cut through two sets of three steel I-beams. These six I-beams were each 15 inches high with a ½-inch web and 6-inch flange varying in thickness from ¼ inch on the outside to 1 inch at the center. It will be appreciated that the section of the metal to be cut through was considerable. The point at which the cut was to be made was located in such a position that it would be necessary to have special saws made, and as three I-beams of this size, side by side, would not cut very easily, it was estimated that in addition to the time required to make the special saws it would take two men at least two weeks at $3.50 a day to saw them off. This loss of time in finishing the job and the expense involved were important considerations, and when it was suggested to Ralph Starrett, superintendent of the contracting company, that inasmuch as a smooth cut was not necessary, it might be feasible to get the girders burned off with the electric arc, he placed the matter in the hands of Clyde J. Coleman of the Coleman Laboratory of Experimental Engineering. Mr. Coleman has done considerable work in the line of electric arc burning for the purpose of getting into safes and vaults with broken locks, and for cutting new doorways in vaults already in place, and also as an interesting experiment to demonstrate the possibilities of safe burglary by this method. Mr. Coleman pronounced the plan of burning off the I-beams perfectly feasible and undertook the task. The time actually required for electrically burning off the six girders was about 12 hours, and from four to five hours more were spent on mechanical work, such as removing girders to get at the remainder. The electric arc therefore did in two working days what would have required from two to three weeks by the usual method, resulting in a great gain of time for completing the remainder of the job.

The plan of operation is very simple. Current was applied at 110 volts from one of the dynamos in the plant of the building. The current used was about 350 amperes. The positive side of the circuit was grounded on the structure of the building and the negative connected to a carbon holder containing a 1½-inch round carbon. The carbon holder had a wooden handle. The operator struck an arc between the spot on the iron to be melted and the carbon. The light and heat were intense, and the effect was very disastrous to the eyes where proper precautions had not been taken. The arc is usually covered over with a muffle, consisting of an asbestos lined iron box, with a hole in the back just large enough to admit the carbon used. The box is placed against the iron to be burned and the carbon thrust through the hole and the arc drawn. In places where there is not room for the box the carbon is simply thrust through a shield consisting of a sheet of heavy asbestos board. Some resistance has to be placed in the circuit, as is the case with any arc working on a constant potential circuit. The resistance used in this case was simply a few turns of German silver wire placed in a pail of water under a faucet, from which it was constantly replenished.

Observations of an American Rolling Mill Engineer.

BY WILLIAM GARRETT.

PARIS, FRANCE, March 13, 1899.—Here I am like a Wandering Jew, having (like the Arab, folded his tent, &c.) disappeared from among my fellow-citizens to bob up here, but, thank God I expect to return to the land of my adoption, sailing on the 18th. Here and in many other places I have visited I find one uniform cry among all iron and steel manufacturers, and that is, Are the Americans going to draw up out of the iron and steel trade entirely? though at the present time they have all, and in some cases more than they can do working full time, and the main thing they are short of is steel in the shape of blooms or billets. When we look at the vast increase in the exportation of steel from the United States to foreign countries during the past two years it is natural that we should feel proud; but to the assumption that this increase was obtained under normal conditions I for one cannot agree.

We will admit that thousands of tons of plates have been shipped from the United States to the Clyde, the center of the plate trade in Europe, we might say; but with all that every plate mill in Great Britain for the past two years and even to-day has more orders than can be filled, so in the above case, at least, we only sent to the Clyde plates that could not be obtained at any price in Britain. We have sold thousands of tons of rails abroad in competition with Great Britain and Germany, but this was because every steel rail maker had all he could do, getting £4 5s. per ton for his rails. I wonder how many tons we would have been able to sell abroad if rails in Europe were made and sold at £3 5s. per ton, which point, I believe, was reached at one time?

I was in a large wire mill in England where they had two rod mills making about 120 tons every 24 hours, and every billet which was 2 inches square in size was imported from a steel works in Pittsburgh (excepting a few tons of steel of a special quality). In almost every leading wire mill in Great Britain American material in the shape of a 2-inch billet can be found; yet every steel works in Great Britain has more orders than it can fill, and all this when Europe has produced more iron and steel last year, and has even increased its export trade (Germany in particular) more than ever before. Then what credit are we entitled to when we only sold them what they had to get but could not make? Why it is just like selling a loaf of bread to a man who is starving, and who has money to pay for that loaf. Was it by good business or superiority in business that we got the trade? Let us see. A Jew was giving his son Isaac some pointers in a business way. He said, "Mine son, when you sell von man von coat and dat man vants dat coat, then dat is nothings, dat is nothings; but ven you sell von man von coat and dat man don't vant dat coat, then dat is business, dat is business." In my mind that is the whole thing in a nutshell.

We boast of our superiority in manufacture by the use of labor saving appliances, but even in this we are deceiving ourselves. A prominent man in steel works in the United States, who has cut quite a marked figure in a certain popular line, visited a large German steel works, and in advocating the adoption of his improved method claimed he could save them 50 cents per ton in tonnage labor, when to his astonishment he found, on the labor sheet being shown, that it only cost them in their crude way 55 cents per ton. Yet this German mill only produced 70 tons in 24 hours, whereas the American mill produced 300 tons in the same time and employed about one-half the number of men. Why? Because in spite of the improved methods in the States to produce large product with the least labor, the wages paid are so much in excess of those paid abroad as to wipe out all the benefit. In fact, the wages received by the five highest paid men in this particular line are in the States more than would have to be paid to 24 men employed in the German mill. True, the adoption of American methods would have reduced the cost of labor there from 55 cents to about 30 cents per ton, but as the Germans were paying good dividends as they were, and it would involve considerable expenditure to make the change, they naturally decided to stay as they were.

Why, then, are we able to export in such large quantities iron and steel? It is not only because of the cheapness of our raw material in ore and coal and coke which gives us cheap material in the shape of steel billets, blooms and tin plate bars, but we also take some of those articles at a cheaper stage, and make them into finished articles, which is not done abroad. To cover the whole ground would make too vast a subject, so I will only treat of steel billets for making steel merchant bars and wire rods.

A prominent iron and steel broker from Liverpool some 15 years ago met the writer at Pittsburgh in a wire rod mill where they were taking a 4-inch billet and rolling it direct into a No. 5 rod. This fact appeared to annoy him very much, for he said: "You fellows are all wrong here; why don't you educate your steel makers to make a 2 inch billet as cheap as a 4-inch billet?" Fifteen years have elapsed since then, and at that time thousands of tons of wire rods were imported into this country; in fact, that Liverpool broker had procured a very large order. Meantime the United States pursued its foolish way of making a 4-inch billet. Importation of rods ceased, and exportation of rods is now in order. Still Great Britain and Germany are struggling to make a 2-inch billet as cheap as a 4-inch, which is as logical as "emptying the ocean with a sieve." But a "cloud no bigger than a man's hand" has appeared in this connection in Europe. A large German wire rod and wire manufacturer has taken steps to get out of the 2-inch billet rut, and is now building a large rod mill (a twin rod mill) to take not a 2-inch billet, not a 4-inch, but a 5-inch square bloom, which will be rolled direct into a No. 5 or No. 6 rod. This will be the first step to enlighten the steel makers abroad that a 2 inch billet cannot be made as cheap as a 4-inch or a 5-inch billet, and by adopting the latest known methods of reducing this 5 inch billet to a No. 5 rod, it will be proven that it can be rolled into rods for less cost per ton than a 2 inch billet. The extra power required for the larger billet is more than counterbalanced by the ability to use automatic means for handling, heating, &c., on the larger size billet.

For the export trade a 4-inch billet is much more desirable than a 2 inch billet, since it is shorter and more compact and more easily handled. In using a 4-inch billet foreign buyers will have the advantage of greater competition among American steel makers, for all Bessemer steel makers can make a 4-inch billet, whereas there are only two or three large Bessemer steel makers who can roll 2-inch billets. Except as a gift, 2-inch billets have never been sold as low as 4-inch. In fact, looking at it from any point of view, the advantages all turn to the using of a 4-inch billet instead of a smaller size billet.

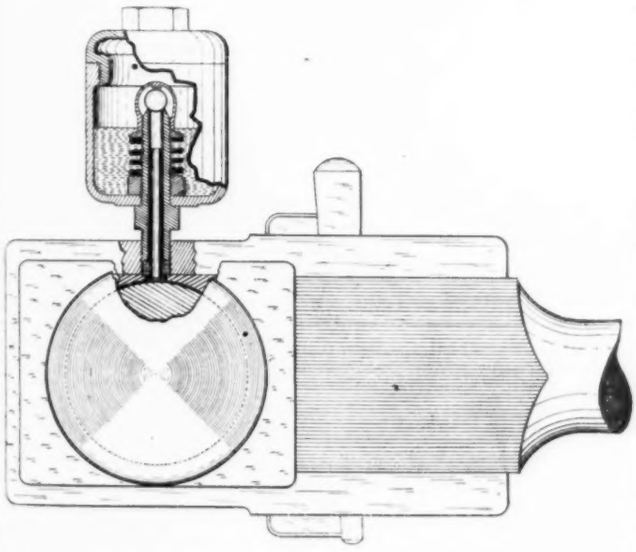
In conversation with many wire rod makers in Great Britain I find that they have taken steps to induce some of their steel makers to give them a 4-inch billet for less money than a 2-inch, but it appears in vain. Meantime foreign material is being poured into Great Britain from all parts of the world, most of which is to be reshipped to Australia and the colonies and South America. The trouble with our British cousins is that they are rather bigoted and set in their ways. This includes the workmen, and if they do not change their tactics soon they will some day wake up and find that nearly all of their business has slipped through their fingers, for the booming times will not last forever. During my visit to Europe a year ago I was trying to induce a large user of wire rods to put in an American rod mill. He replied, "If you can tell me where I can dispose of the product I will put in a Garrett rod mill at once." A few days afterward I was passing through a seaport town in England. I took a walk along a dock, and I saw some wire rods on the dock. I said to a dock hand, "Where are those rods going to?" He replied, "They are not a-going, sir; they have just a-come. They have come from Germany." Walking a little further along I saw some wooden barrels filled with bright wire. This I also found had come from Germany. A little further along I saw some kegs of nails marked "Made in Germany." Upon this I could not help thinking that so far as wire rods, wire and wire nails were concerned Great Britain did not produce all she needed. Turning into a street that led toward the center of the town I saw a building being constructed; saw some steel girders. Thinks I, with American pride, those girders will be stamped "Carnegie & Co.," and come from America, but no, "Dortmund, Germany." Passing along further I came to a small show window, in which there were some small cheap pictures placed on view; among them I saw a picture of the Prince of Wales. At the bottom of the picture there appeared to be, at first sight, the name of the painter who painted that picture; but no, it only said, "Made in Germany." In deep meditation I passed along, when a delightful strain of music struck my ear. Looking around I did not see the performers. Turning abruptly the corner of the street I saw them, and I found they were also "Made in Germany." All this, while having considerable satire, has more truth than poetry in it.

Before closing this, I note from your issue of *The Iron Age*, March 2, that you are in the midst of a raw material famine for even home consumption, that ore and coal mine production are being pushed to the extreme limit on the one hand, on the other the billet market controlled by large organizations. Is not this the proper time to utilize part of the millions of tons of steel to be found on the face of Mother Earth and put it into finished material? Who is the Moses who will help us in this direction in this our hour of need?

L. L. Ensworth & Son of Hartford, Conn., are carrying a large stock of burnt leather for case hardening or other purposes.

The Egan Automatic Oil Cup.

The new motion bearing oil cup herewith illustrated has been brought out by the Egan Mfg. Company, Milwaukee, Wis. The cut shows the cup in use on a connecting rod, with a portion of it broken away to enable the method of feeding to be disclosed. The stem projects into the body of the cup. Through the stem is a large straight hole, made thus so that it cannot become clogged from oil deposits or impurities. Covering the upper opening of the hole is a steel ball, inclosed in a threaded four-armed cage. A projection in the upper part of the cage determines the movement of the ball on the end of the stem. A tension spring under the cage and around the stem serves to keep the cage in the position to which it is adjusted. As the engine is started in motion the oil is thrown against the ball, which raises slightly from the seat and allows the oil to pass into the tube. The amount of oil used is regulated by the play given the ball between the stem and the cage, and it may be adjusted so as to empty the cup in five minutes or 30 days, as the work may demand. When the cup is used on connecting rods or similar bearings a brass tube is provided which projects from the hole in the stem down to the pin, thus avoiding any possibility of the oil escaping between the brasses. This tube is adjustable and can be moved up or down in the stem to meet the requirements in each case. The use of this cup avoids such devices as center oilers, with their stands, tubes, &c., or the wipe rigs commonly used. The



THE EGAN AUTOMATIC OIL CUP.

oil is not thrown around the engine room and no oil guards are necessary on the engine. No attention is required in starting or stopping. It is made with an aluminum body and steel stem, which will especially be appreciated for high speed work. The cup is also made in brass or nickel with a steel stem, but the aluminum cup is 60 per cent. lighter. The cup is made in four sizes, from 2 to 4 inches in diameter, but an all brass cup is made in 1½ and 2 inch size for gas engines, threshing machine engines, &c.

Preparatory to supplying the Union Carbide Company with electrical power to operate their large new plant now in building, the Niagara Falls Power Company have placed an order with the Westinghouse Company for seven 2500 horse-power transformers. These machines will involve the largest units that have ever been manufactured, and will be similar in pattern to the transformers built by the Westinghouse Company for the Cataract Power & Conduit Company of Buffalo, and installed in the Ohio street transformer station of that company some months ago. They will be of the standard oil insulated type, water cooled by the circulation of water through coils of pipe immersed in the oil, which method does away with the necessity of all blowers, fans, pumps or motors for cooling, and when once in proper regulation requires but little attention. The Westinghouse people promise that the efficiency of the transformers will be very high. They will be used for stepping up the 2200 volt current, as it comes from the generators to 4400 volt, three phase, for the carbide company's use. If desired the transformers may be used for raising the 2200 volt current to 11,000 or 22,000 volts, three phase, for the Niagara-Buffalo transmission line, or if need be they may be employed in stepping down the voltage of the current.

The Ensley Land Company.

Under date of March 10 A. M. Shook of Birmingham, Ala., has issued the following statement:

The Ensley Land Company were organized under a charter granted by the State of Alabama in 1890, and their property originally consisted of 3797.25 acres of land. The first sale was made in 1893, and at the end of 1895 the total sales amounted 50.73 acres. The total amount realized from sales to that date was $2,325.20. No further sales were made by the company. On the 25th of January, 1897, the whole property was sold to satisfy a judgment in favor of the Birmingham Railway & Electric Company for $17,373.98, which belonged to the estate of Jas. C. Warner, deceased. In order to prevent the property from being sacrificed for this small debt, and to protect the other creditors and the stockholders, an agreement was made with all the creditors by which the property was conveyed to Jas. Bowron and N. E. Barker in trust. The trustees are, first, to sell property enough to pay the debts; secondly, to reconvey the remaining property to the stockholders of the Ensley Land Company. The report of the trustees shows that they have sold 409 acres of land for $51,773 47, which amount has been applied to the reduction of debts of the company in accordance with the stipulations in the declaration of trust. This leaves 3337.52 acres unsold at this date. The total indebtedness of the company on this date, after deducting the $51,773 47 received from the trustees, is $97,898.89.

On the 11th of April, 1893, the stockholders of this company by resolution reduced the capital stock from $10,000,000 to $500,000, by authority of an act of the Legislature of the State of Alabama passed 10th of February, 1893. At this date 61 per cent. of the stock has been converted into new certificates on a basis of $500,000, leaving still outstanding $3,900,800 face value of the old stock that has not been changed.

Last July the Tennessee Coal, Iron & Railroad Company commenced the erection of a large steel plant at Ensley with estimated capacity of 1000 tons per day. This was followed by locating the Alabama Steel & Wire Company at Ensley, who are now building a wire, rod and nail mill, with an estimated capacity of 600 tons a day. A large brick works and two large wood working establishments have been located there. Negotiations have been completed for a plant that will manufacture from furnace slag from 1000 to 3000 barrels of Portland cement daily. Negotiations are now pending with two large companies for locating their plants at Ensley, one for the purpose of manufacturing steel pipes and one to erect a beam and girder mill. These industries, when working full, will give employment to no less than 5000 men. In addition to the above named plants, the Tennessee Coal, Iron & Railroad Company will this year open two new coal mines, and perhaps build at least one addditional furnace to the four already located at Ensley. They will also concentrate their machine shops and foundries there. If houses can be built fast enough to shelter all the operatives required in connection with this development, your property, which practically surrounds both the towns of Pratt City and Ensley, will within two years have a thriving population of 25,000 people. The indications are that the developments and improvements in the Birmingham district will be greater in the next two or three years than at any time in its history. If this is true the property of the Ensley Land Company will necessarily derive more benefit from this development than any other section of the district, for the reason that manufacturers and users of either wood, iron or steel products will naturally seek location at Ensley, first because the transportation facilities are better than any other section of the district: secondly, all of the raw materials that they will require in making their products are produced at Ensley.

The Shelby Steel Tube Company.—The Shelby Steel Tube Company of Cleveland, Ohio, call attention to the use of cold drawn seamless steel tubing for locomotive bushings, collars, rings, commutator and bushings, armature journals, fusion bushings, roller bearings and hollow spindles. The Shelby Steel Tube Company have a process of manipulating and working the solid open hearth steel billet into a hollow cylindrical tube, which, it is claimed, improves rather than destroys the original integrity of the metal. The process utilizes the neutral element of the solid cylindrical billet by forming the interior of the billet into a surface without waste of metal. In comparison with boring and machining from the solid metal a better quality of product is obtained, and economy of labor and cost in the finished article is secured.

The Development of Industry in America.

BY KARL WITTGENSTEIN, VIENNA.

We republish below the last part of a paper read before the Oesterr. Ingenieur und Architekten-Verein by Karl Wittgenstein of Vienna. The first part consists of an interesting statistical comparison between Germany and the United States, followed by a historical sketch. Mr. Wittgenstein's review of the causes of the development of industry deserves attention not alone on account of his position as by far the most conspicuous figure in the Austrian iron trade but also on account of the fact that in his earlier days he was a resident of this country and is therefore more competent to judge than the ordinary globe trotter.—(Editor *The Iron Age*.)

I was obliged to give this little historical review, because it has to serve as a foundation for my real subject, to which I am at last coming—viz., the causes of the development of industry in the United States. But I will not speak of those causes which are obvious—*e.g.*, the wealth and abundance of coal, ores, fertile land, immigration, the large rivers, &c. I desire to speak of those causes which are connected with the historical education of the American people. I believe each of us is the product of his education, of the education of his fathers, and of the surroundings among which he grew up. And so I believe that a nation possesses those qualities which it has acquired owing to its history and education.

Two hard centuries taught the American nation diligence, perseverance and great frugality, imbued it with healthy—if you like, relentless—egotism, a desire for education, a speculative spirit and a great love of liberty. Perhaps not all of you will agree with me when I say that those are qualities needed by a people for its industrial development just as much by the manufacturer himself. Perhaps you will say: Diligence, perseverance, frugality, yes! But egotism, a speculative spirit, desire for education, love of liberty—no! I shall try to show you that nevertheless these qualities are connected with the development of industry.

Circumstances like those amid which the American nation grew up are unfavorable for the creation of sentimentalists, and the Yankee singing mandolin in hand by moonlight is something little corresponding to reality. Yet I do not mean to say that the American has not his heart in the right place; but the struggle for existence has created in the American egotism, that impulse to rely on his own strength, undeviatingly to labor for the improvement of his own lot, and to consider the attainment of that end perfectly sufficient, an impulse not equally developed in all individuals and all nations.

The greed of the English, who are not wanting in egotism, also did its part. The English actually went so far as to forbid the sending of machinery or drawings or descriptions of machinery to America to prevent the development of industry in the colonies!

Protection.

It is to this conflict of interests that the American protectionist system owes its origin. The Americans could not see why they should put their English cousins in the way of earning money. Already during the War of Independence they pledged their word not to get goods from England, and in the act of constitution Congress was empowered to impose duties for the benefit of home trade. Since that time—that is, for a whole century—the protectionist system, which was opposed by the agriculturists, though it has never been in real danger, and which has so mightily promoted the development of industry, has been in force. It was also antagonism to the English which founded and fostered the protectionist system in France.

In our youth all of us were free traders, are so still to some extent. That has to do with our education, which was under German influence. The Germans had the peculiarity of not thinking of their own interests, but of enthusiastically admiring other nations, including the English; also many German rulers were related to the English royal family. Prince Bismarck was the first to break with that principle in Germany. He could not see why Germans should buy English goods which they themselves could make, even though they cost more; and to day it is interesting, instructing and amusing to read the speeches then made in Parliament, and to see what opposition Bismarck had to overcome when he inaugurated the Protective system in Germany. Professors and national economists prophesied that the protective duties could not remain permanently, that they would ruin commerce. But he who knew the German industry and commerce of that day and knows those of the present must come to the conclusion that even professors of political economy may err. [Laughter.]

Education.

In their struggle with nature and the English, who were so far ahead, the Americans soon recognized the necessity of having science and knowledge as allies. As early as the year 1640, it may be said when the colonies were still in leading strings, the Legislature of Massachusetts issued an edict requiring every settlement to have school kept for six months in every year, and to have the children taught not only the three R's, but also geography. In 1645 this law was renewed with a threat for those parents who neglected to have their children taught. This law was successively adopted by most of the colonies. I believe at that time there was no talk of compulsory education in Europe. The well-known American statesman, Daniel Webster, who was Secretary of State for Home Affairs, in 1822 in a celebrated speech made the assertion that the question as to whether the Americans would retain their liberty or not depended simply on whether the nation persevered in its endeavor to extend its education. [Cheers.]

I do not think that in Europe in 1820 there was any statesman who would have adopted that standpoint. In the American Constitution is a clause prescribing that as soon as a settlement is made a certain portion of the land shall be reserved as the property of the school: and the result is that to-day the public elementary schools, of which there are 325,000 to 350,000 with 500,000 teachers, possess a fortune of $400,000,000—*i.e.*, nearly 1,000,000,000 florins. As long ago as 1850 education, as well as books and other educational materials, was free in the primary schools in many States.

Germany and the United States more than all other countries and more perfectly than any others have cared for the education of the people. In regard to popular education the United States is but little behind Germany probably, for although in the West naturally there are districts where education is not up to the standard of the age, because the people are so scattered and so poor, yet in the East not only need not popular education shun comparison with that in any other country, but it might often serve as a pattern; besides that it must not be forgotten that for America the school is not the only means of education. A further one is to be found in the 12,000 weeklies and 2500 monthlies, which, as can be seen by observation, are diligently read and promote culture and learning.

The educated workman in Germany and the United States is one of the chief pillars of his country's industry. All of us who have had to do with industry know how to value the educated workman, not only because he does work the uneducated one could not do, but also because, in his endeavor to improve his lot, he directly and indirectly compels his employer to perfect his methods of work. I assert that the uneducated peasant, who himself has learned nothing and does not have his son taught anything, who humbly stands hat in hand in the presence of the land owner, the parson or the Government official, is the greatest hindrance to the progress of industry [expressions of assent], because he is the point of departure and the greatest support for all efforts, which, partly consciously and partly unconsciously, hinder all progress.

Speculation.

I have referred to egotism and a desire for education as qualities of the American nation. But it owes its evolution to another gift, without which, in my opinion, a manufacturer is only a bungler. The American has a pronounced love of speculating. I do not mean to speak of stock exchange speculators; there are speculators in the better sense of the term. Let me enter into particulars. There are people who imagine a manufacturer to be a man furnished with a certain quantity of technical and mercantile knowledge, who, with the capital he has inherited, builds a factory, and then diligently, quietly and comfortably runs it. I believe there is a considerable amount of error in that conception. The manufacturer must venture; must, if the moment require it, venture everything on one card, even at the risk of not reaping the fruits he hoped for, of losing his stake and being obliged to start in life again. Industry offers no field for quiet, constant, easy going work; the less so the more developed it is, the more widely it is spread and the more it is dependent on the world markets. The wants of single men and single nations are uncertain and move by fits and starts, and the conditions on which success or failure depends in industry are just so and equally little to be foreseen. Who will presume he can foresee what the position of any article will be in the market in the next ten years; what the harvest will be like in America, Russia, Asia; what quantity of cotton or wool will be brought into market; what new inventions will create new wants and make old ones disappear; how many ships will be at sea; whether there will be peace or war? Nobody! And yet the question of the success of industry depends on all these things. In old times business knew nothing of these dangers; it was intended to supply the wants of its own immediate neighborhood and they could be estimated.

Industry knows no finality and cannot reckon with any finality. The manufacturer must not only be a mechanician and merchant, and as such able to follow the fluctua-

tions of the market for his productions, but he must perceive the demand for new articles in time, must recognize the value of new methods of working and also have the courage to adopt them; in a word he must take into consideration a whole series of factors which are not definable, not tangible and often dependent on chance; he must be also a speculator.

This word speculator is offensive to many ears, not alone to the ears of those circles for which mankind begins with the rank of a baron, but also for those circles whose course and habits of life presuppose their having a wide horizon in material things. The word speculation is offensive to the ears of those people who have no occasion to risk anything and therefore, I will not say despise the speculator, but do not consider him their equal. The word speculator is offensive to the ears of those who cannot venture anything, win anything, and therefore look on the unexpected gain which another has as obtained by improper means. The word speculator offends the ears of those unaccustomed to handle great sums of money and quantities of goods, and who consequently do not know the fall and rise of price in the market, do not know the consequences of such fluctuations, and look with distrust and disgust at such persons as are compelled to carry on industry on a grand scale and to deal in the world market. I understand the feeling and have not come here to glorify the speculator; I shall not make any pyrotechnic show in honor of speculation. But one must have the courage to say: A man lacking the speculative mind, a manufacturer without the capacity for taking into consideration besides the visible moments also the uncertain ones lying in the future, and of coming to corresponding decisions, even at the risk of having events turn out quite differently, is unfitted for the management of an industrial establishment.

This faculty, as well as the courage to exercise it, is not innate, like, say, a talent for music, but must be acquired by diligence and practice. The American nation possesses that faculty, and to a large extent owes it to the influence of historical events. While the Americans for two centuries were toiling to turn the primeval forest into arable land and to create a dwelling place for men who wanted to work untrammeled by religious and other persecutions, they little thought that thus they were opening the door for a new migration of the peoples. From 1820 till 1890 more than 18,500,000 immigrants entered the United States. Only think, gentlemen, what a change that could not but produce in the utilization of all that was above and below ground. A piece of land valueless to day may in the course of a few years make its owner a millionaire, because the settlements have become a town. This rapid change in all values, like the undreamed of demand for wares of all sorts, railways, houses, &c., on the part of a population increasing so quickly, could not but wake the speculative faculty of a nation, which would not allow itself to be prevented from working for the promotion of its material interests. Each separate branch of industry wished to be prepared to satisfy needs which might yet arise, and each manufacturer wanted to be the first to pocket the expected profit.

Business Crises.

But crisis follows speculation like shadow follows light, and the intenser the one the darker the other. That is the reason why there is no country in which crises are so frequent and so serious as in America; I should well-nigh say that the crisis is permanent in America. The yearly average of failures in the States is 13,000, with $150,000,000 of unmet liabilities; in Germany, 6000, with $50,000,000. I have already compared the census of 1880 with that of 1890 to show that in those ten years the production in the different industries was doubled; in some cases trebled. From the same comparison it can be seen that the number of factories in the same industry materially decreased, sometimes by half.

Let me give some examples. In the year 1880 in the States there were 1900 agricultural implement factories, in the year 1890 only 900; consequently 1000 factories disappeared. Most certainly the great majority were small ones. But at all events you will admit that the disappearance of 1000 establishments in one branch of industry within ten years would have produced a most serious crisis in any other country. The number of flour mills in those ten years fell from 24,000 to 18,000, so 6000 mills were shut up. The breweries and other establishments for the manufacture of alcoholic liquors within that same period decreased from 3100 to 1900. In 1880 there were 700 paper mills, in 1890 only 560 (a diminution of 140), whereas the value of the paper made increased from $55,000,000 to $80,000,000. But as paper cannot like brandy be made on a small scale, actually 140 large concerns in a flourishing branch of manufacture disappeared in ten years.

This phenomenon, whose existence I could prove by many more examples did I not fear to tire you with figures, shows that while, on the one hand, a number of factories of the same kind had to give up work, on the other hand a number of new ones were started, and already existing ones adopted improved machinery; were that not so it would be impossible for the value of the output to increase despite the diminution in the number of factories. This phenomenon proves further that each branch of industry, urged on by a restless speculation, is permanently in a state of crisis, in which as many fortunes are lost as manufacturers compelled to stop work, and new fortunes are made in the same measure as the production in the surviving of newly established factories increases.

For the individual who has lost his fortune these crises are sad and painful enough; but as facts prove they are very good for the development of industry as a whole, and particularly good for the training of workmen and engineers. It is often asserted, and believed by the Americans themselves, that they have special technical talent; I do not believe it. In America the average man has far more opportunity for exercising his mechanical talent owing to the rapidity with which small old establishments disappear and larger, better equipped ones arise. Of engineers and merchants you will prefer him who has repeatedly had opportunity to gain experience in one estal lishment, and to make use of it when starting new establishments in the same branch. Every engineer would rejoice to be called on at the inauguration of a new establishment to carry out those improvements which in the small old establishment he had recognized as desirable, but which the circumstances prevented his carrying out. In such a case a man can accomplish and learn somethin g.

The American engineer and artisan more frequently than their European colleagues have an opportunity of seeing the disappearance of old institutions and of helping in the establishment of new undertakings. So American industry owes to the much abused and feared crisis, which again is a consequence of speculation, its invaluable staff of experienced engineers, merchants and well schooled workmen, and every branch of industry the much praised perfection of its machinery. It is this last which enables American industry in many cases successfully to compete with European industry, despite high wages.

Economic Liberty.

Such conditions arise, however, only in connection with the completest economic liberty; only there where the ever protecting and ever regulating hand is lacking, the hand which has to protect the immature people from harm, to prevent crises from arising, and which endeavors by times to crush the very germs of unsound undertakings. Indeed the American's speculative faculty would be of little use to him had he not the liberty to indulge it. He does enjoy the liberty to risk new enterprises, whether it be alone or with others as a joint stock company.

The joint stock company in America, like in all industrial countries, is far the most prevalent form of industrial undertaking. It is the only way in which a small capitalist can take part in industry, and it affords the large capitalist an opportunity to join a greater number of undertakings, thus securing himself against the risk of a single one. In the United States the legislation makes no distinction between the one form and the other in which capital participates in undertakings, all the same to what department they belong, and equally little when the nominal value of the shares is not more than a dollar, which frequently is the case.

The question of how morals fare with this liberty, and how far the public are the victims of unprincipled fleecing, involuntarily suggests itself to us. The numerous crises and the number of failures show there is a good deal of both sanguine speculation and cheating mixed up with the starting of new joint stock companies; but if we take into consideration the fact that there are many thousands of joint stock companies (the number of railway companies alone amounts nearly to 1800), and if with one's own eyes one sees the great development of industry, one must come to the conclusion that in America liberty is not nearly so much abused as is assumed in many circles. A people unaccustomed in purely business matters to expect State protection draws wholesome lessons from these crises, is made prudent by loss and learns the necessity of looking after its business itself. Most people have a good look at a man before intrusting him with their money.

However that may be, and however many enterprises are started which have no right to exist, the American nation as a whole has no reason to regret the great liberty which it has till now preserved for itself. The railways will serve as an example.

I have already said that the United States has a network of railways 300,000 km. long. Among them are lines with a total length of 50,000 km., with a capital of $2,000,000,000, which pay no interest at all, and there are further 50,000 km. which bring in a minimum of profit. According to our notions such railways are upon a dishonest basis, and the money invested in them by capitalists, and which, at least for the present, is lost for them, amounts to thousands of millions of dollars. But the rail-

ways as such still exist and are serviceable to agriculture, industry and commerce, which owe to them a great part of their present development. But that by no means exhausts the utility of these lines to the people in general. Through the wild competition of the railways the means of transportation have made progress of which we know nothing. Trucks usually have a freighting capacity of 300 to 500 quintals and the carriage of goods in bulk amounts to 0.25 cents (0.6 kr.) and less per ton an English mile. For the journey from Prague to Vienna that equals a rate we cannot conceive—namely, 13 kr. per 100 kgs.

In Europe the State would have taken care that gullibility or confidence should not be taken advantage of in such measure; and for gullibility and confidence such care is very pleasant. On the other hand, however, in America industry and agriculture, and consequently prosperity, find the railways an assistance which they do not find in Europe. During the last few decades also the German Empire has enjoyed great liberty in economic matters, which also it owes to Prince Bismarck, who certainly was a Conservative; yet he not only allowed the greatest liberty in economic questions, but also obstinately defended it. We learn from a letter of his to Emperor William in the year 1877 how he resisted "the shoes for which we are measured at the green table of the legislature," and how he fought with "ministers and with councillors, whose bills are for the most part the work of mere jurists and do harm."

Somebody once said that the Danube flows in the wrong direction for Austrian industry; its course should properly be from east to west. That is a thing no one can alter; but education and liberty can be spread everywhere at slight expense. It was my object to show that education and liberty are the chief causes of the development of industry in the United States, and that the sacrifices the American nation has made for them have been amply rewarded.

The Union Malleable Iron Company.

A new plant will be built at East Moline, Ill., by the Union Malleable Iron Company of Moline. It will be of large size, with an annual capacity of 10,000 tons of malleable castings. The following description of the new establishment has been furnished by the company:

The ground to be occupied has an area of 522 x 900 feet, and it is situated between the main lines of the C., R. I. & P. and C., B. & Q. A 15-foot roadbed for switches branches off and runs parallel with the main tracks of the two roads. On the extreme west of the buildings is storage room for pig iron, coal yard, &c. Then comes the foundry, with north and south dimensions of 408 feet, and east and west dimensions of 150 feet. A space of 274 feet is left on the south for a future extension of the foundry if necessary.

The foundry is connected with the hard mill room by 25-foot gangways. The mill room will be 50 x 80 feet in dimensions, and directly adjoins the assorting room, 40 x 50 feet in dimensions. Another 25-foot gangway leads to the annealing room, further east, which has dimensions of 100 x 225 feet. From the annealing room the process of manufacture leads to the soft mill room, 50 x 50 feet, just north of and adjoining the annealing room.

Castings which need no machine work will be taken directly to the shipping room, to the northeast side of the plant, and alongside the switch track of the C., B. & Q. This shipping room is 60 x 204 feet in dimensions. Castings which need machine work will be transferred from the soft assorting room to the machine and blacksmith room, between the shipping and annealing rooms, with dimensions of 50 x 128 feet. The carpenter and pattern shops will be located in a two-story building, 50 x 80 feet, and situated just north of the hard mill. The pattern shop will be confined to the second story of the building, and on the ground floor adjoining the building is a 40 x 50 foot extension for a pattern vault.

The core room is located south of the hard mill, and it is to have dimensions of 50 x 80 feet, with a space of 58 feet for future extension. South of the core room are spaces of 40 x 50 and 50 x 80 feet for future extensions of the hard assorting and hard mill, respectively. Then comes the engine room with dimensions of 50 x 50 feet, and adjoining is the boiler room with like dimensions.

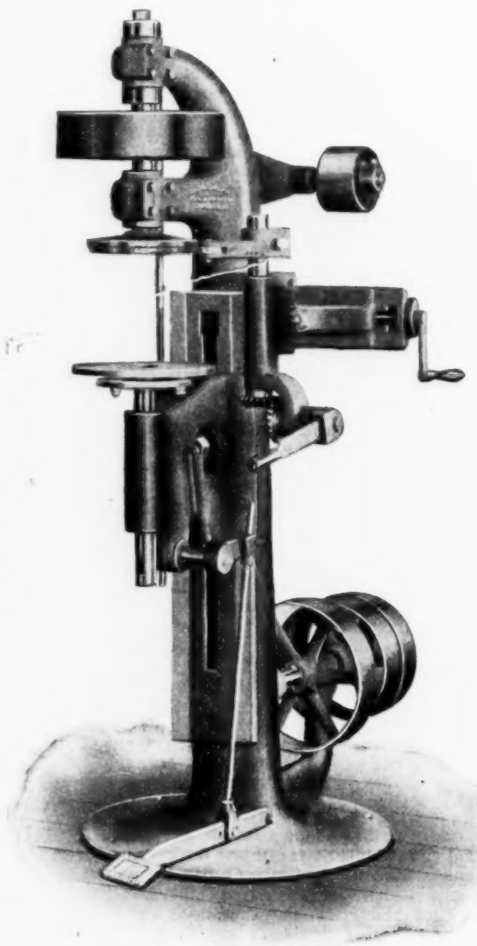
The main office building is to be located just east of the annealing room. It will be two stories in hight, with dimensions of 50 x 60 feet. The timekeeper's and superintendent's office, 30 x 60 feet, is just south of the office, and further on space has been left for a 50 x 50 foot clothes and wash room for the men, and a 50 x 50 foot bathroom, also for the employees. These last two innovations have not been altogether decided on yet, but Manager F. W. Gould says they will surely be built if the company have enough money left. A 50 x 50 foot barn is located on the extreme southeast corner of the plant.

The company propose to do their annealing by gas, and a 30 x 186 foot space is set apart on the south end for gas producers.

The plans have been prepared by C. H. Pope (who is to be superintendent of construction of the new plant), C. C. Heald, superintendent of the works and a St. Louis malleable expert.

Upright Crimper and Double Seamer.

The machine here illustrated is the largest size of a line of upright crimpers and double seamers brought out by Rudolphi & Krummel, 96 to 100 North Clinton street, Chicago. The machines as built regularly can be used for crimping and double seaming all styles of round cans, cups, buckets, pails, &c. They are modified quite frequently to suit special purposes, as, for instance, a sliding table can be fitted for work requiring an inside chuck or roll, or special attachments can be made



UPRIGHT CRIMPER AND DOUBLE SEAMER.

for double seaming bottoms without a recess. For curling or false wiring the edges of pails and buckets the side brackets are dispensed with and the curling chucks are fastened to the upper spindle, the necessary pressure for doing the curling being applied to the lower spindle by means of the treadle. The lower spindle runs in a regular cup step bearing, thus always retaining sufficient oil for lubrication. The adjustment for different hights of cans is obtained on the larger sizes by an adjustment of the apron, this adjustment being obtained by means of a screw on the left hand side of the machine, thus always keeping the apron suspended while being adjusted. The lever for operating the rolls is arranged to swing vertically, this motion being less tiresome than the usual horizontal one. Depressing the handle completes the seam as the first roll passes by the seam. The handle is returned to its upper position by means of a spring. The distances between the centers of the driving pulleys and idler pulleys are greater than usual, thus reducing the wear on the driving belt to a minimum. They are built in five sizes, from 250 to 1500 pounds in weight, and for cans ranging from 5 inches to 21 inches in diameter.

Lake Iron Ore Matters.

DULUTH, March 25, 1899.—Prices set for ores by the February meeting of the old range pool do not seem to have any very marked effect on the situation, and there are small sales being constantly made at advanced quotations. The figures are not very much higher, but they show that anything in the shape of iron need not go begging for a purchaser this season. Inferior ores are selling at better prices than high grade ores brought at the early scramble, and the tendency is steadily, though conservatively, upward. There could be a considerable further advance in ores and the margin between ores and present prices for finished products for early delivery remains ample.

The Sauntry Purchase.

The American Steel & Wire Company have bought the Sauntry exploration on the Mesaba Range for $700,000, and paid the cash. The Sauntry cost its late owners almost nothing, that is, only a few hundred dollars, and most of this in taxes. It was owned by Musser, Sauntry & Clarke, and fell to them after the former owners dropped it as valueless, when they had cut off the pine that covered the surface. There is an ore body of anywhere from 25,000,000 to 40,000,000 tons, of which a small portion is Bessemer. The fact that it is a stripping proposition, and the last one of the kind for sale on the Mesaba, probably had a good deal to do with the sale. The property had been explored and dropped by the Minnesota Iron Company and had been refused by the Consolidated. Most of its ore will probably run from 58 to 60 per cent. iron and rather high in phosphorus, though there are said to be several million tons of Bessemer on the large tract. There is a good deal of manganiferous ore, too low to be of value for its manganese, and the best of the ore in the mine lies in the bed of a stream of considerable size. Additional developments by the American Steel & Wire Company are expected before long. Several sales of mineral lands on the Mesaba and other ranges have been made of late, and others are pending. An 80-acre tract in 23, 58-20 has just sold for $130,000, and the last bunch of stock in the Security Land and Exploration has changed hands at the offered price of 300 per cent.

Labor Matters.

The Ishpeming branch of the Mineral Workers' Union has sent out notices that indicate the possibility of labor troubles the coming summer. They will endeavor to round up all mine workers in the association fold, and offer inducements for early enrollment. It is about time for strikes; the men are getting better wages than in many years, and there is plenty of employment for all, and it is just such conditions that bring about the bitterest strikes. The only time when miners will not entertain the thought of striking is when they are getting $1 a day or less, and when there are more men than jobs. Most of them cannot stand prosperity. Strikes this season would be very serious matters.

Late Opening of Navigation.

There seems to be some concern in Cleveland over the probable unusual freezing of stock piles at, mines on account of cold weather and the effect this may have on early shipments. Stock pile loaders at the mines quite often work into frost all summer, at least till July and August, and the conditions this year will probably be no different from those usual. Navigation, when it does open, will open with a rush, as all long headed mine managers will try and get the greatest possible amount of ore down early. Docks, mines and roads will all be phenomenally busy from the start. Navigation, however, does not promise an early beginning. There are 36 inches of clear ice in the Lake Superior harbors and more than for years in the connecting channels and ends of the lakes. This, with large bodies of snow in the country surrounding the lakes, means a late opening, and it is doubtful if there will be any vessels in Lake Superior much before May 1. Still the modern vessels will go through ice that would have been impenetrable five years ago.

Negotiations are pending for the sale of the Zenith Transportation Company's vessels, five 7500-ton ships, to the Federal Steel interests for use in handling iron ore. If the deal is closed A. B. Wolvin, managing owner of the line, will enter Mr. Hill's employ in the capacity of organizer and manager of a great trans-Pacific fleet to operate from Seattle to the Orient in connection with the Great Northern road.

Lake Fleets.

There will be this year on the lakes the following ships controlled by iron ore interests and used chiefly in carrying ores; Bessemer fleet, 24 ships; Minnesota fleet, 18 ships, or, with the Wolvin boats, 25 large ships; American Steel Barge fleet, 30 ships; Interlake fleet, 3 ships; Huron fleet, 2 ships, both these latter being associated with the Minnesota Company; Cleveland Cliffs fleet, 6 ships; Mutual fleet, 4 ships. The ore trade demands, of course, many ships in addition to these, notably such as the big fleets of the Davidson and Wilson lines, and many smaller lines.

Captain Joseph Sellwood, who has been intimately connected with the Minnesota Iron Company since the early days of the company, will leave it in a short time and carry on an individual business. Captain Sellwood has the reputation of knowing as much of lake mining conditions as any man in the West, having been engaged in mining on the copper and iron ranges for 35 years. He was very prominent on the Gogebic in its early days and came from there to the Minnesota Company, where he brought the cost of mining ore to a point hitherto unheard of in the Chandler Mine. To-day every property in the possession of the Federal Steel Company in Minnesota, with the single exception of its first purchases at Tower, has been bought under the advice and at the solicitation of Captain Sellwood. He is regarded as one of the most expert judges of mines in this country. He has collected a group of properties around the Brotherton on the Gogebic, and will operate them, but may be actively employed in another and most important capacity.

Queen group, Negaunee, has resumed operations, with 130 men, and will increase later. The pending transfer to the Carnegie interests has not yet been closed. Salisbury mine, Ishpeming, has been metamorphosed lately. Hoisting plant and office have been installed in new buildings and shops have all been moved from ground that was in danger of caving. Ore is being hoisted rapidly through the new shaft. Chapin mine, Iron Mountain, is employing 900 men and is hoisting an immense amount of its standard ore. The management has now completed a work of years, the changing of the system of mining to the caving, and the taking of ore from pillars left under the old system in the upper seven levels is now over.

Hjalmar Lundbohm of the Swedish Government geological survey and Axle Bellwick, chief engineer of the Gellivare iron mines, 80 miles north of the Arctic Circle, have been on the Lake Ranges the past few weeks, going from the Chapin to the Chandler, and Mesaba. Needless to say they saw and heard a good many things to elicit surprise, not the least of which was the statement that 700,000 tons of ore were hoisted from a depth of 800 feet through one shaft in the Chapin in a year. Mesaba deposits and methods and cost sheets of such mines as Fayal and Chandler were also eye-openers. Mr. Lundbohm told of a deposit of magnetite 120 miles north of the Arctic Circle that had been tested by drills by his government and found to contain 230,000,000 tons of ore above the level of a proposed railway. This ore is crystalline and contains as high as 6 per cent. of phosphorus, and is valuable for basic plants.

The Thomas Furnace Company, Niles, Ohio, that have recently sold out to the Steel & Wire Company, have closed an option for the 120-ton furnace at Duluth, and will enlarge and blow it in. It would not be surprising if some experiments in the use of low grade Minnesota ores were carried on there, and if plants for using part of the product of the furnace should be installed soon.

D. E. W.

A Record Breaking High Duty Pumping Engine.

The Lake Erie Engineering Works, Buffalo, N. Y., recently completed the installation of a large pumping engine for the Fourteenth street station of the city of Chicago which has made a wonderful showing. The contract price for the engine was $85,000, on a guarantee that it would pump 30,000,000 gallons in 24 hours, developing 135,000,000 foot pounds per 1000 pounds of dry steam. The contract, however, provided that a 24 hours' test should be made before the acceptance of the engine, and that the city would give a bonus of $1000 for each 1,000,000 foot pounds developed above that stated in the contract, a similar reduction or rejection to be made if the efficiency fell under. The test was made on the 16th inst. under the supervision of John C. McMynn of Robert W. Hunt & Co., acting for the city; Newcomb Corbin of Buffalo for the engine builders, and F. W. Catlin of Minneapolis, former city engineer, as the third man. The official report of the testing board has not yet been made public, but it is known that over 150,000,000 foot pounds was developed, and that while it was kept pumping at the rate of about 33,000,000 gallons it was shown to be easily capable of pumping 35,000,000 gallons. The builders will receive a handsome bonus, running considerably above $15,000, and a new standard has been made for future specifications in pumping machinery for Chicago. City Engineer Ericsson says that the new engine is a model of its class. It is a vertical triple expansion engine.

The Mannesmann Projectile Contract.

WASHINGTON, March 28, 1899.—In view of the various reports concerning the status of the contract awarded to the Mannesmann Tube Company for $500,000 worth of projectiles, the deliveries to be made between October 6, 1898, and March 18, 1899, Acting Secretary of War Meiklejohn has caused an authoritative statement to be made to the correspondent of *The Iron Age* by an official of the Ordnance Bureau of the War Department. The contract with the Mannesmann Company has been annulled under circumstances which seem to justify fully the prediction made at the time of the award by representatives of the American manufacturers who protested against the granting of contracts involving large quantities of munitions of war to companies without plants or adequate facilities for meeting the conditions of the contracts.

Readers of *The Iron Age* will remember that the War Department in July last awarded to the Mannesmann Tube Company a contract calling for $500,174 worth of shells of 8, 10 and 12 inch calibers for coast defense guns. At the same time awards aggregating nearly $1,300,000 were made to the Midvale Steel Company, the Carpenter Steel Company, the Firth-Sterling Company, the Taylor Iron & Steel Company and the Benj. Atha & Illingsworth Company. The official correspondence in the case shows that the award was made to the Mannesmann Company in face of the protest of the officials of the Ordnance Bureau, but it appears that the Secretary of War and his immediate advisers were impressed with the importance of establishing a plant in the United States capable of producing the character of shells which it was understood had been tested with complete success and purchased in large quantities by the leading European governments. The officials of the Ordnance Bureau based their objections to the award upon the fact that the material was needed at the earliest practicable date and that the Mannesmann Company would not only require to build a plant in this country, but would be obliged to pass through the preliminary experimental stages before a reliable product could be turned out that would meet the prescribed tests. Several prominent public men, including at least two United States Senators, had become interested in seeing what promised to be a large industry established in the United States which would probably furnish employment for a considerable number of well paid operatives, and these gentlemen used their good offices to induce Secretary Alger to award to the Mannesmann Tube Company a contract sufficiently large to justify the construction of a plant. Finally, after much correspondence and a series of interviews that consumed much time, a contract was prepared in duplicate dated July 29, 1898, between the Secretary of War and the Mannesmann Tube Company, under the name of the Titan Company of Cook County, Ill., under the terms of which the company agreed to manufacture 600 8-inch shot, 600 8-inch shell, 500 10-inch shot, 500 10-inch shell, 200 12-inch shot and 219 12-inch shell, the consideration being $500,174.05. Soon after the letting of this contract Assistant Secretary Meiklejohn in a statement to the correspondent of *The Iron Age* described the steps taken by the Mannesmann Company to establish a plant, as follows:

"Since the letting of the contract to the Mannesmann Company the firm have acquired a very large tract of land at Pullman, Ill., adjacent to the plant of the Pullman Palace Car Company. The plans of their works have been submitted to the Department, and they have given the customary bond for a faithful performance of the contract within the prescribed period. The Department understands that the company have contracts with the Pullman Company for certain steel material, and every evidence has been given that an important industry has been established in the United States, which will employ American labor and a large amount of American material. I feel personally that the Department is to be congratulated upon the establishment of this industry, and I can say very positively that every step that has been taken in the matter by the Department has been solely with reference to the public interest."

In view of the foregoing it was generally understood that the contract between the Secretary of War and the Mannesmann Tube Company had been promptly signed by both parties and that the company were liable under their bond for any failures to deliver the projectiles in accordance with the schedule which formed a part of the contract. It is a fact, however, that the contract, though formally awarded to the Mannesmann Company, was never signed by the representatives of that company, and was annulled under circumstances showing clearly that the company had entered upon an undertaking which they were not in a position to carry out. The facts in connection with the forfeiture of the contract were thus described to the correspondent of *The Iron Age* by the ordnance official above referred to:

"The contract for the material awarded to the Mannesmann Tube Company was forwarded in duplicate to be executed in due form. Several weeks passed and the contracts were not returned to us. In the meantime the officials of the Bureau had become tolerably well convinced that the company relied upon securing labor abroad and were not advised of the scope of the contract labor laws, which would prevent the importation of such skilled laborers as might understand the processes employed by the company in their European plant. Some difficulty was also experienced in making it clear to the representatives of the company that the Department would be obliged to require a more rigid ballistic test of their projectiles than those furnished by companies permitting the usual open inspection of their plants. The reason for this was the fact that the Mannesmann Company proposed to use a secret process, and as the Department's representatives could not form so reliable a judgment of the quality of the projectiles in the course of their manufacture it became necessary to submit a larger proportion of them to an actual test. This necessarily involved the use and destruction of a larger number of plates, so that although the Mannesmann Tube Company were permitted to reduce their bid to the price of the so-called American syndicate, the cost of their output to the Department would still be somewhat higher because of the extra expense incident to the tests referred to.

"During the period following the awarding of this contract to the Mannesmann Tube Company the American manufacturers were working to the limit of their capacity in filling contracts awarded to them, and therefore the Secretary of War naturally reasoned that even if the Mannesmann Company failed to meet the requirements of their contract the Government would not be the loser, for the award could then be withdrawn and divided up among the American manufacturers.

"After a lapse of considerable time the Mannesmann Tube Company, instead of returning the contracts forwarded to them, applied for an extension of time within which to make deliveries. The Department replied that as the agreement had not been signed no contract existed, and consequently it could not be extended. The company therefore were requested to forward the signed contracts as speedily as possible. This was not done, but after further delay a representative of the company brought the contracts to the Bureau and surrendered them, whereupon the award was annulled and the amount involved has since been allotted to American manufacturers, including the Midvale Steel Company, who received $300,000 as lowest bidders; the Carpenter Steel Company receiving $110,000, and the Wheeler-Sterling Company receiving $110,000."

It is understood that the representatives of the Mannesmann Tube Company made strenuous efforts to secure from capitalists and other manufacturers such cooperation as was necessary to the construction of a plant adequate to the production of projectiles and other forms of steel in large quantities, but were not able to make satisfactory arrangements in time to meet the requirements of their contract with the War Department. The Department officials believe that the company have acted in good faith throughout, but that the difficulties incident to the construction and fitting up of a large steel plant in a very short space of time were greatly underestimated. W. L. C.

Among the new positions created by the Naval Personnel law is that of warrant machinist. Arrangements are now being completed for the admission into the navy of 100 of these warrant officers. Examinations will be held at all the principal yards in about six weeks' time. The examination will be competitive, and will embrace these subjects: Handwriting, arithmetic, marine engines, marine boilers, auxiliary machinery, indicators and diagrams and working sketches. The preference will be given to men already in the navy, or who have at any time served in it, after which civilians will have an opportunity to appear for examination. The new positions are worth from $1200 to $1800 per annum, according to length of service. The machinists will have separate quarters on board ship from the enlisted men.

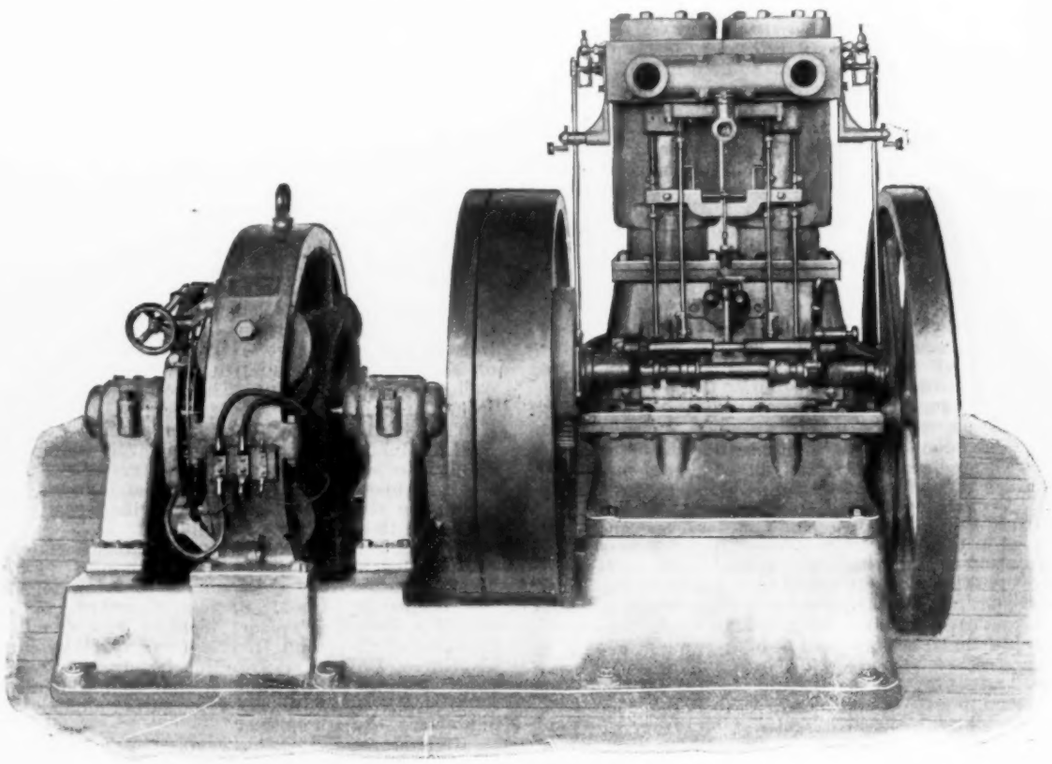
J. M. Staton, Bridge Inspector, and C. E. Powell, Supervisor of Buildings and Bridges, of the Chesapeake & Ohio Railroad, accompanied by four bridge engineers, arrived a few days ago at Newport News, Va., on a novel handcar, having made the trip on this new device all the way from Cincinnati. The car is operated by an engine, the motive power being gasoline and electricity combined. The engine is of the same pattern as that used in the naphtha launches on the lagoon at the World's Fair. This peculiar car was built at the Chesapeake & Ohio shops, under the supervision of Mr. Staton. Others, it is said, will be manufactured at once.

The Nash Direct Connected Gas Engine and Dynamo.

The Nash gas engine, which has been gradually developed during more than 12 years of service, for pumping and general power purposes, has of late years been improved in the direction of adapting it to the more severe requirements of electric lighting. The matter of design has been carefully considered, and also the selection of materials best suited for the purpose.

The vertical type of engine has been adopted on account of certain advantages, among which may be mentioned simplicity, compactness and ready accessibility for examination or adjustment. The vertical frame permits a higher speed without undue vibration, and the strains are transmitted directly to the foundation, where they are absorbed. There is also less friction and wear to the vertical piston, and the oil used to lubricate the piston works downwardly instead of collecting at the power end, where the hot gases are liable to carbonize the oil and cut the cylinder. It will be noted that the principal working parts, such as the crank shaft, main bearings, crank pins, connecting rods and lower end of trunk pistons, are inclosed by the frame, the lower part of which contains oil, which is being churned up by the action of the engine so as to lubricate all these working parts. These are thus protected from dust and grit and are readily accessible, when desired, through a large door in the side of the frame. These features secure cleanliness, better lubrication and economy in oil. The valve motion is all operated by a supplementary shaft, driven by spur gearing from the main shaft. The valves are all plain poppet valves, the most durable form for such service, and they are all operated by hardened cams mounted on the secondary shaft, which also carries the eccentric to operate the electric igniters. Steel forgings are used for the crank shafts and connecting rods, the main bearings and other boxes being made of phosphor bronze. All the working parts subject to heavy strain are liberally proportioned so as to run without undue heating or springing. Close attention to all these details is very important, since the working pressures in gas engines are much higher than in steam engines, and it is, in fact, mainly in these particulars that less carefully designed gas engines have failed when doing heavy work. The smaller engines, 3 to 10 horse-power, are single cylinder, while those of 15 horse-power and over are two-cylinder, or even three or four cylinder. Increasing the number of cylinders increases in like proportion the impulses on the crank shaft and gives greater regularity to the motion than where only one cylinder is used. Not only this, but the intensity of such impulses is reduced and the strains on the crank shafts and other working parts are lessened. This is highly important for electrical work and very desirable for pumping, as the lessened shock insures longer life to the pumps.

Regulation of speed in the cylinder is by the method of missed ignitions, the frequency of the ignitions possible per minute being varied by a sensitive governor, of either the shaft or fly ball type, which controls the gas valve so as either to admit or fail to admit gas for a power stroke according to the work being done at each instant. The engines operate on what is known as the four-stroke cycle and the regulation in speed is within 2 per cent from full load to no load, while at the same time economy in gas consumption is obtained. Repeated tests and experiments have shown that this method conduces best to high economy combined with the good working qualities and durability of the engines. All of these engines may be operated by city gas, gasoline gas, natural gas, producer gas or liquid gasoline used direct. For the latter fuel a simple attachment is provided and electric igniters are used. The attachment is simply a small pump, operated by the engine, and drawing its supply of gasoline from a storage tank placed outside underground and distant 30 feet from any insurable property. The pump delivers the gasoline to a small metal tank attached to the engine, whence it is fed to the cylinder as required through suitable feed valves. The gas valve controlled by the governor determines, however, when gasoline shall enter the cylinder, which it does in the form of gas which is formed by the action of the engine as it draws in air mingled with gasoline vapor in proper proportions. The Nash engine is built by the National Meter Company of 84 Chambers street, New York.



THE NASH DIRECT CONNECTED GAS ENGINE AND DYNAMO.

The "M. A. Hanna," a new steel steamship for the Cleveland Steamship Company, was successfully launched on Saturday at the Globe Shipyards, Cleveland, Ohio. The vessel is 430 feet in length, 50 feet beam and 22 feet deep. She will have a capacity of 5600 gross tons, and will be equipped with triple expansion engines, 63-inch diameter of cylinder with 42-inch stroke, and three Scotch boilers.

The Structural Iron Company, Baltimore, Md., have been awarded the contract for the structural steel for the new Naval Academy buildings at Annapolis, Md., amounting to 1500 tons. The company are now making important additions to their plant and equipment.

Canadian News.

Rainy River Iron Ores.

A very marked awakening of interest in the iron ore lands around Greenwater Lake in the Rainy River district is manifest. On the presumption that the Atikokan range will be a shipper of ore this year several claims have changed hands of late. Whether any of the properties will become shippers this year depends on whether construction work on the Ontario & Rainy River Railway will be pushed to the mines in time or not. Wm. Mackenzie, the capitalist who has the charter for that road and is building it, has, it is reported, become interested in iron deposits in the Greenwater Lake and Shebandowan districts. Port Arthur looks forward to a large iron traffic to the head of the lakes this season.

Aid to Iron Smelters.

An important amendment in the Ontario Mines Act is proposed by the Commissioner of Crown Lands. Before introducing it he stated that application had been made for Government aid to charcoal iron smelters. Section 11 of the present law provides for the payment by the Government of a bounty of $1 per ton upon all the pig iron product of Ontario ore smelted within the province. The sum expended in this way, however, is not to exceed $25,000 per annum, and the law provides for the arrangement only up to January 1, 1901. To this section the Commissioner now proposes to add the following provision:

"In the case of a blast furnace which uses charcoal made within the province as the sole fuel in smelting ores, payment may be made out of the fund of 50 cents per ton in the proportion of pig metal, the product of ores not mined in Ontario, subject to the condition that the following proportions of Ontario ores are smelted therewith: (a) In the first period of two years not less than 20 per cent. (b) After two years not less than 40 per cent. (c) After four years not less than 60 per cent. (d) After six years not less than 80 per cent. (e) After eight years not less than 100 per cent.

"And payment on the proportional product of Ontario ores shall be on the basis of $1 per ton of pig metal. But in case the proportion of Ontario ores smelted in a blast furnace shall in any year of a period fall below the percentages herein specified, there shall in such year be deducted from the payment of 50 cents per ton on the product of ores not mined in the province a percentage thereof equal to the percentage of deficiency in the requisite amount of Ontario ores, provided, however, that if the proportion of Ontario ores smelted in any year is less than 20 per cent. no payment shall be made out of the fund to such furnace for that year."

Thus the amendment makes some material changes. One appears to be that the time during which bounties may be paid is extended six years at least. Another is that a provincial bounty shall be paid on pig iron made in Ontario from imported ore. These changes will be of material advantage to the Deseronto Charcoal Iron Company, who began operations last autumn. That company brought in several cargoes of ore from the Lake Superior mines of the United States. Similar benefit will probably accrue to the Canada Iron Furnace Company when they begin to make the iron at Midland. That they will start operations there seems now a certainty, as the Government is evidently favorably inclined to the Midland bonus bill, there appearing to it to be conditions in the Midland case that make that case exceptional.

The Commissioner also proposes an amendment increasing the price of mining lands 50 cents per acre in most mining localities in Alguna, Thunder Bay, Rainy River and a portion of Nipissing district. At present a first discoverer of ores is entitled to a free grant of 40 acres if the vein or lode is five miles from the nearest known mine. It is now proposed to make the distance 10 miles.

Mineral Production in Ontario.

A statement given out by the Ontario Bureau of Mines shows that there were produced in the province in 1898 48,253 net tons of pig iron, valued at $530,789. In this production 130 men were employed, receiving in wages $61,476. Of nickel copper ore the produce was equivalent to 8,373,560 pounds of fine copper, valued at $268,000, and 5,567,690 pounds of fine nickel, valued at $514,220. Of gold there were produced 16,075 ounces, valued at $271,906.

A Steel Shipbuilding Scheme.

For months the dream of a big steel shipbuilding industry has been growing in the minds of the Nova Scotia people more or less slowly toward a reality. After the meeting of the Maritime Board of Trade, at which the prospects of Nova Scotia in this regard were forcefully set forth by Mr. Carmichael, the question was warmly taken up by the press of the province, which has never let it drop since. The formation of the Dominion Steel & Iron Company, the favorable treatment of that company by the provincial Government, which has agreed to remit half the royalty on the coal used by the company for eight years, has advanced the idea in the hopes of all, as one of the industries which the new company are expected to bring into existence is steel shipbuilding. But in another quarter progress is being made. At Dartmouth, N. Evans & Son enlarged the scale of their operations, and last summer had several very important repairing contracts. Now it is stated their ship repairing works there have been handed to a syndicate of English capitalists, who intend to make great improvements. A ship is to be built on the most modern lines in which large vessels can be handled. In addition a steel shipbuilding plant is contemplated. The capital, it is said, is already secured for this part of the enterprise. But the scheme is of still wider scope. It includes steel making as well. Whether the latter works are to be in Dartmouth or Halifax is not decided.

Trade Items.

Byron W. Goodsell of Chicago, B. Y. Coryell of Cheroning, Mich., and John McKay of Sault Ste. Marie, Ont., who are applying to the Ontario Government for a charter of incorporation for the Bruce Mines & Algoma Railway Company and for the Worthington & Onaping Company, are now in Ottawa endeavoring to secure from the Dominion Government a bonus of $3200 per mile for the first 10 miles of the former road and aid for the latter. The Bruce Mines & Algoma road is to be 50 miles long. An English company are preparing to put machinery in the old Bruce copper mines, these having been pumped out. The other road will pass near the McConnell, Sultana, Inez and Trilla Bell copper and nickel mines, through Levack township nickel range and on to Vermilion Valley gold mines.

Shurley & Dietrich, saw manufacturers, Galt, are adding buildings for the manufacture of iron bedsteads.

A contract has been given to the Canadian General Electric Company of Peterborough, Ont., for plant for the Ottawa machine shops and car works of the Booth railway system. There are two 3-phase generators, each of 200 horse-power and two motors of 130 horse-power each, and lighting plant. The power is to be furnished from the Chaudière.

The North Sydney *Herald* says that the Dominion Coal Company have purchased a large quantity of machinery to be operated by electricity.

The Abbott-Mitchell Iron & Steel Company are, according to Mayor Johnson of Belleville, erecting a plant of double the capacity contemplated.

Certain promoters are trying to effect a consolidation of the bicycle manufacturing companies of Canada. The companies it is thus sought to bring together are the following: Goold Bicycle Company, Brantford; Evans & Dodge, Windsor; Welland Vale Company, St. Catherines; Cleveland Bicycle Company, Toronto; Massey-Harris Company, Toronto; Gendron Bicycle Company, Toronto. It is claimed that $175,000 per annum could be saved in the cost of marketing alone if the companies were amalgamated.

Midland ratepayers have voted almost unanimously in favor of the by-law empowering the Town Council to carry out the agreement with the Canada Iron Furnace Company and pay that company a bonus of $50,000. Further, the bill enabling the town to carry out such an engagement has passed the Private Bills Committee of the Ontario Legislature. C. A. C. J.

The Iron and Steel Institute.—The annual meeting of the Iron and Steel Institute will be held in London on May 4 and 5, 1899. At this meeting the council will present their report for the year 1898. The president elect, Sir William Roberts Austen, will deliver his inaugural address, and papers promised by Prof. J. O. Arnold of Sheffield, H. Eauerman of London, E. Disdier of Bilbao, Jeremiah and A. P. Head of London, Baron H. von Jüptner of Donawitz, Austria, Prof. H. Louis of Newcastle-upon-Tyne, Bertrand S. Summers of Chicago and Professor Wiborgh of Stockholm are expected to be read and discussed. The autumn meeting of the Institute will be held in Manchester on August 15, 16, 17 and 18.

The second annual convention of the American Association for Testing Materials will be held in Pittsburgh August 15 and 16. The Engineers' Society of Western Pennsylvania has accorded the use of its assembly rooms on Penn avenue, where the annual meeting and executive sessions will be held.

At a meeting of the members of the Manufacturers' Association of the Mahoning and Shenango valleys, held in Youngstown last week, it was decided to increase wages of common labor employed at the mills in the two valleys from $1.15 to $1.25.

Manganese in the Acid Open Hearth Process.*

BY F. A. MATTHEWMAN.

The author hopes, in the following remarks, to present as completely as possible the principal effects of manganese in the open hearth process. The majority of the statements and deductions contained herein are founded principally on practical observations of weighed charges, and calculations made from the materials employed and the metal and slag at various stages of the process.

Composition of Steel Furnace Slags.

The manufacture of steel in the Siemens furnace has not formed the subject of many papers in this country. Although writers have dealt with modifications of the process, no paper professedly dealing with the reactions of the process has been published since that read before the Iron and Steel Institute by Arthur Willis of Landore in the year 1880.

If we assume the average content of our pig iron as silicon 2.75 per cent. and manganese 1.2 per cent., and that the scrap used contains 0.05 per cent. silicon and 0.5 per cent. manganese, we obtain the following as the theoretical production of slag by a charge containing 80 per cent. pig iron and 20 per cent. scrap (using 4 hundredweights ore per ton of steel, the ore containing the following impurities: Silica, 7 per cent.; lime, 5 per cent; oxide of manganese, 1¼ per cent.):

100-Cwt. Charge.

	Cwts.	
80 cwts. pig at 2.75 per cent. Si = 2.20 Si 20 cwts. scrap at 0.05 per cent. Si = 0.01 Si	2.21 = 4.62	silica.
Sand from 80 cwts. pig at 2 per cent.	1.60	silica.
Silica from 20 cwts. ore at 7 per cent.	1.40	silica.
Silica from hearth of furnace†	2.50	silica.
	10.12	silica.
Lime from 20 cwts. ore at 5 per cent.	1.00	lime.
MnO from 20 cwts. ore at 1¼ per cent. = 0.25 cwts. MnO 80 cwts. pig at 1.2 per cent. Mn = 0.96 cwts. (1.06 Mn = 1.37 MnO) 20 cwts. scrap at 0.5 per cent. Mn = 0.10 cwts.	1.62	MnO.
Assuming finished slag to contain 25 per cent. FeO, we obtain $\frac{12.74}{3} = 4.24$ cwts. FeO.	4.24	FeO.
Total weight of slag from 5 tons (100 cwts.) charge...	16.98	cwts.

†Campbell gives 1200 pounds as the average wear of the hearth in a series of 15 consecutive 10,000-pound charges of two-thirds scrap and one-third pig, and assumes that in the pig and ore process the wear would be 1800 pounds. In the above calculation it is taken at 1500 per 60,000 charged—*i. e.*, 2½ per 100.

Calculating the percentage composition of the slag thus produced, the following figures are obtained:

	Per cent.
Silica	59.6
Lime	5.9
Oxide of manganese	9.5
Oxide of iron	25.0

It will readily be seen that the composition of the slag of necessity varies greatly, according to the composition and quantity of the materials employed, as well as to the method of working, and it is not claimed that the analysis here given is an average, but it is given to show that the amount of oxide of manganese in the slags obtained in open hearth practice in Scotland approaches more nearly 10 per cent., while if the manganese in the pig iron exceeds the figure taken, or if the amount of slag is reduced, either by the presence of less silicon in the pig iron or the use of more scrap in the charge, the percentage quantity of oxide of manganese in the slag will be correspondingly increased, and may even exceed 10 per cent. Indeed, it is within the writer's knowledge that this figure has been exceeded—not in one charge or a selected few, but in regular practice, analysis of an average sample of 50 slags collected (not selected) during a period of two months' working in the year 1897 showing 13 per cent. MnO.

Manganese in the Ores.

From the above calculation it will be seen that the amount of slag produced in the working of an average charge is approximately equal to the amount of ore used. It therefore follows that the percentage of oxide of manganese in the slag which has been derived from the ore is the same as the percentage amount of this constituent contained in the ore. If the composition of an ore in other respects was satisfactory, and effected the oxidation of the impurities of the charge with the same economy, the higher percentage of oxide of manganese would not diminish its value to the steel maker; and in view of the probable scarcity of the ore, which has been almost the only one employed in the open hearth process for many years, the possibility of the economical use of other ores for the same purpose becomes a question of importance to all steel producers. Some manufacturers have used extensively, with results satisfactory to themselves, the rich ores of Cumberland and Elba.

*Abstract of paper read before the West of Scotland Iron and Steel Institute.

Manganese in the Pig Iron.

As we have already seen, this is of far greater importance than the percentage of oxide of manganese in the ore. Even with a charge initially comparatively low in manganese, the metal contributes by far the greater proportion of the manganous oxide in the slag. More than 5 per cent. of manganese is objectionable, not only on account of the delay it causes, but also on account of the destruction of the silica bottom. These objections constitute (along with the loss of yield due to the presence of so readily oxidizable an element) the objections of the steel makers to its presence to-day. It is the effect on the economic conduct of the process which is feared, and not the influence of the constituent on the finished product, the manganese in the initial charge being entirely removed by oxidation before the period of boiling commences.

It is an axiom which admits of no discussion that manganese causes delay, but it is somewhat difficult to differentiate between delays due to excess of silicon or manganese and those due to imperfect knowledge on the part of those responsible for the working of the furnace; but, as manganese is so readily oxidizable and is eliminated along with the silicon, it may be safely assumed that the delay it causes, if any, is inappreciable.

The reduced yield consequent upon high manganese is self evident. Although the presence of 0.5 per cent. of manganese in pig iron undoubtedly leads to a loss of ⅛ per cent. when such iron is converted into steel, it is by no means certain that the presence of a further 0.5 or 0.7 per cent. of this constituent increases the loss to a similar extent; on the contrary, although the manganese is completely removed during the melting stage from a charge with about 0.5 per cent., charges initially high retain a considerable portion when melted—Willis says "about 50 per cent. of the total amount, varying slightly with the temperature of the furnace," and the writer has in some instances obtained melted samples containing 1 per cent. of manganese (0.6 to 0.8 being of frequent occurrence), and as this is removed during the process of feeding with ore it is probably accompanied by a reduction of a similar amount of iron from the ore added, in which case the Scotch iron, with 1 or 1.2 per cent. of manganese, would cause no greater loss than the English iron containing only half that quantity.

Further, the oxide of manganese thus produced is capable of replacing ferrous oxide in the slag; and if this action is taken advantage of the amount of iron thus replaced must be credited to the excess of manganese, in which case the extra quantity would not only prove no objection but a source of distinct gain.

A further possibility which must not be lost sight of is the fact that just as silicon and manganese act as protective agents during the melting stage, protecting the iron itself from oxidation, so manganese may (being more readily oxidized than silicon) protect this latter element to some extent, and allowance would then require to be made for the iron which would be reduced from the ore by the silicon thus saved from atmospheric oxidation during the melting stage. But as the amount of iron reduced from the ore falls considerably below the calculated theoretical quantity which should in this way be added to the charge, and as the furnacemen, from deficiency of heat or other cause, may delay commencing to feed, thus causing a loss of manganese by the oxidizing action of the flame, we may conclude that, whereas the presence of 1.2 per cent. of manganese in pig iron possibly causes no more loss than 0.5 or 0.6 per cent., any further increase would tend to waste.

Oxide of manganese, undoubtedly, exerts a strongly corrosive action on the sand of the acid Siemens hearth, but this is no less the case with oxide of iron. When a piece of iron or steel scrap is allowed to melt on the banks of an acid furnace the oxide of iron produced during the melting instantly attacks the silica of the hearth, forming a fusible ferrous silicate, the banks being cut in such places as the drops of melting steel trickle upon. Notwithstanding this action, it would at the present day be seriously argued that it was dangerous to melt steel in contact with the bottom; in fact, the amount daily charged on the furnace bottom in America, even in acid practice, is so great as to entirely discount any fear which many of the old school of melters still retain.

It is evident that the extent to which a furnace is cut is directly proportionate to (among other things) the richness of the slag—the slag or cinder rich in ferrous oxide which trickles from melting scrap, and the slag from melting ferromanganese or manganiferous pig iron, are equally hurtful; it is, therefore, pertinent to inquire what constitutes an inert slag and what proportion of ferrous oxide or manganese oxide (or both) can be considered allowable. Probably no slag can properly be described as inert, as even if so constituted as not to attack the hearth by chemical action there will inevitably be a certain amount of scorification arising from the mechanical agitation following each addition of ore; but as some slags are undoubtedly more corrosive than others it will be advisable to revert once again to a consideration of the compo-

sition of melting furnace slags. H. H. Campbell says: "There is a force at work in an acid furnace constantly creating a slag with 50 per cent. silica and 45 per cent. of ferrous oxide plus manganous oxide." If this be conceded the natural inference is that such a slag is as nearly inert as need be, and the slag resulting in our practice containing 10 per cent. more silica (the fluxing constituents being reduced by the same figure) is even less harmful.

Even when the manganese in the pig iron reaches 2 per cent. and the silicon and sand are reduced to 1½ and 1 per cent. respectively, the slag produced need be no richer than the typical slag given by Campbell. Calculation in the same manner (assuming the wear of the hearth to be the same, and again taking the amount of ferrous oxide as 25 per cent.) yields a slag of the following percentage composition:

Silica	51
Lime	7
Manganiferous oxide	17
Ferrous oxide	25

Slags of similar composition to the foregoing are frequently quoted in Mr. Campbell's book, which gives the average manganous oxide in slag from several charges as 15 per cent., while in no place does the author speak of such slags having any harmful effect on the hearth of the furnace.

Open hearth practice in the States, however, differs considerably from the practice in this country; for whereas in this district the charge is principally composed of pig iron, the general practice in America has been to use 75 per cent. of scrap, thus decreasing the quantity of carbon and silicon in the charge, and thereby diminishing the time the slag is in contact with the hearth of the furnace. The relatively small quantity of ore required in American practice permits of the automatic regulation of the composition of the slag suggested by Campbell; in this country, on the otner hand, the method of charging the scrap on the top of the pig iron, exposing it to the full oxidizing influence of the flame, tends to the formation, during the melting period, of a slag rich in ferrous oxide; and as the melter during the succeeding operations makes additions of ore when he "thinks advisable, rather than when it is absolutely necessary," the slag is not given the opportunity to adjust its composition, but is usually kept so rich in oxide of iron that the banks of the furnace are severely attacked during the working of every charge, whether the slag is rich in manganous oxide or not.

In the author's opinion the practice of allowing this automatic adjustment of the composition of the slag—or, in other words, permitting the carbon of the bath to reduce the excess of oxide of iron from the slag—is attended with considerably less corrosion of the hearth. The stoppage of feeding tends neither to diminution in production (loss of time in working) nor to a lessened yield. The practice of driving with ore to the last moment, on the other hand, causes considerable loss, by reason of the excessive quantity of oxide of iron which is wasted in the slag. Thus, whereas the amount of oxide of iron in an average sample of 50 slags was only 19 per cent., a selected sample of variant practice illustrating the effect of driving (the same quality of pig and ore being employed) showed 28 per cent. of ferrous oxide with 10 per cent. of oxide of manganese.

Notwithstanding all the arguments contained within the foregoing lines, it will still be maintained that such theoretical reasoning is totally insufficient to combat the undoubted fact that not only manganiferous pig iron, but even "black" ore, has caused considerable and serious difficulty in practice, the bottom of the furnace being completely destroyed, often coming up in lumps among the charge, and necessitating extensive repairs before the furnace was again ready for use. It is very improbable that the extra 2 or 3 per cent. of manganese contained in the "black" ores is responsible for so serious an action as this. The slag in American practice often contains as much as 20 per cent. of oxide of manganese. It would be expected that, if this element was in itself responsible for the trouble, the bottoms of the American furnaces would be constantly going wrong, as the writer has never obtained a slag containing more than 19½ per cent. of manganous oxide even when using highly manganiferous pig iron. The cause of the trouble must, therefore, be looked for in some other direction, and the most obvious explanation appears to be as follows: The sand bottom formed when commencing to work a new furnace is always more or less porous, and however carefully the operation of bottoming is performed it not only absorbs a large quantity of the slag charge used for washing, but it also appropriates a considerable percentage of the first charge or two melted thereon. Further, no matter what care and attention is bestowed upon the "fettling" after each charge, pieces of the bottom will occasionally give way and be found bad when the furnace is tapped, and whether splashed, washed or dried out, a greater or less quantity of metal will remain in the bottom, which in course of time becomes so impregnated with metal as to need flowing and remaking. Under these conditions it is evident that no furnace bottom is so hard and free from metal as might be wished, and if from any cause the heat of the metal of the charge is higher than usual, it will at once attack the weak spots and cause the bottom to come up, partially or wholly, according to the quantity of metal which the sand retained; and as the heat produced by the combustion of the carbon in the bath is better retained by a thick slag than one which is rendered fluid by the presence of an excess of ferrous oxide, it follows, as a natural sequence, that if the automatic adjustment suggested by Campbell takes place in a furnace, the man in charge of which is accustomed to work with fluid slags, the extra viscosity produced by the lessened amount of ferrous oxide causes the bath of metal to be hotter, and thus to find the weak places, if any, in the bottom.

The remedy for such trouble evidently is to permit this automatic adjustment to take place and to regularly work with more viscous slags than is generally done. The necessary heat for tapping would then be more easily obtained the brick work of the furnace would last longer, the corrosion of the slag line would be lessened, and when the furnaceman was thus trained to judge the heat of the metal itself rather than that of the furnace, the use of manganiferous ore and, if needful, more highly manganiferous pig iron, would not be attended with such serious consequences as it appears to have been in the past.

In conclusion the author desires to state that this paper has not been written with a view to encourage the manufacturers to increase the percentage of manganese in the pig iron they produce, but is a hastily written attempt to present the opinions deduced from a series of observations undertaken with the view of gaining experience which would prove of service in the event of the failure of the supply of Campanil ore which has been so long threatened.

Pacific Coast News.

SAN FRANCISCO, March 20.—Up to the night of March 14 the outlook for the crops of the State for the present year was very blue indeed. A condition of settled dry weather seemed to have set in and the almost universal impression was that we were in for another dry year. Anticipations in trade circles were as a rule of the gloomiest character. In places in the San Joaquin Valley it was said the grain was rotting in the ground. The weather was clear and cold, with never a sign of rain. But all of a sudden there was a change. On the date just noted a storm came suddenly out of the West unheralded by the Weather Bureau or any other authority on such matters, and gave a thorough drenching to all the northern portion of the State. On the next day it had reached every part of it north of Tehachapi and Monterey Bay. The next day Southern California heard the glad tidings, and, taken all in all, the State has received a thorough drenching. The fall varied from 1 to 4 inches with an average of about 1½ and plenty of snow in the mountains. This secures crops, pasturage and mines and with light rains from now on the crops are secure for the year. In some sections, such as in the neighborhood of Stockton and in Stanislaus County, there will be better and larger grain crops than ever in the previous history of these sections, so that unless the cold dry weather should return —and of that there is now no sign—the business prospects are the best in a decade; nay, than for a much longer period. Grain, fruit, citrus and deciduous, beet sugar and the precious metals will bring to this State an income such as she has been long a stranger to.

The heavy expenditures of the Government have proved a godsend to city merchants and manufacturers Without it they would have felt the pinch severely. As it was most of them have been doing a good business for quite a while. Every week now a transport goes out to Manila, taking a full load of supplies for the troops, the men of war and other departments of the Government's service.

As one result of the rain I look for a big demand for agricultural implements. This business had but a poor outlook, as 1898 was a bad year for it, and 1899, as far as any one could see, promised to be a great deal worse. The result was that country dealers were holding back their orders on all hands, especially in the southern half of the State, and the manufacturers throughout the country were bracing themselves up to hold out for better times. For we in California have mainly our own State to look to. There is some export demand and occasionally there have been large orders received from Mexico, but this is a rarity and the grain crops of the State are the only standby. In the East it is different, as a whole or partial failure in one section is made up in another. The undesirable condition of things would have struck Stockton with particular force, for here the most flourishing industry of the kind in the State has its seat and center, and here also several important inventions and improvements in this line have had their origin. The city in question is the business center of the most extensive agricultural sections of the State.

In my last communication I unwittingly fell into an error. J. D. Spreckels & Bros., the most extensive shipping firm of the city and the owners of the vessels composing the Oceanic Steamship Company, had decided to have three vessels of large tonnage built, and it was given out that they were to be built at Cramps' ship yard because the Union Iron Works of this city had too much work of the kind on hand to complete these vessels within a reasonable time. This last statement, however, proves to be erroneous, and there has been much unfavorable comment made on the action of the firm. Of course, as long as they are built in the United States it is all the same to *The Iron Age*. It was anticipated by the public generally that this act of the firm in question would result in the enforced idleness of a large number of workmen, but this proves not to be the case, as a large Eastern firm have given orders for the construction of two large ocean steamers, which will be employed in the Hawaiian trade. This will give full employment to the whole force of workmen for quite a long time to come. The Hawaiian trade is the most important general merchandise trade that this city enjoys outside of what was formerly United States territory, and it has of late been growing at a great rate. It is a particularly good market for machinery, pumping engines, iron pipe, hardware and iron and steel generally. The value of that trade this year will not fall short of $1 500,000 and may reach $2,000,000. Of course machinery is the great standby of the iron and metal trade with the islands, but other articles are assuming a good deal of importance. This trade is now carried on by means of sailing vessels, of which there are more than a score in the service. There is one steamer, the "Australia," which makes monthly trips, while the Australian steamer also helps out in the business. But there is ample room for the two new steamers, which will help to develop the trade on account of their swift passages and generally better service. There is also some talk of a couple of new steamers for the coast trade, which will doubtless be built here too. There are several of our iron works that can build steamers of moderate size, but only one that can construct ocean leviathans.

The machinery business was quite good last year and during the present year it has been good so far. The vessels that were built here for the Government, for Japan and for the Klondike took a great deal of machinery in addition to the usual demand for home use in the mines, &c., and for export. I have already referred to the increase in the latter. Here a portion of the trade that should have come to Americans went to European manufacturers. During the close of the year large quantities were shipped on sailing vessels for plantations in the Hawaiian Islands. The European manufacturer saw that this was his last chance before the tariff of the Hawaiian group should have been assimilated to that of the United States, and he hurried up his business accordingly.

Since my last communication there has been a general upward tendency in prices of all articles of iron, steel, &c., but no special marked advance. An advance in prices in San Francisco is ordinarily a long one, each one waiting to see what his neighbor will do and not so infrequently catching that neighbor napping and disposing of a goodly volume of merchandise at lower figures than his fellow tradesman. But since the organization of the hardware men this spirit has given way to one more conducive to prosperity in every respect, so that an advance nowadays generally means one all along the line.

There will without much doubt be a tremendous salmon pack on the Coast this year, as a great fleet has already sailed or is preparing to sail for Alaska and the Columbia River. British Columbia and Puget Sound will do their utmost to swell the quantity. Then the timely rains have saved the fruit crop as well as the grain crops, and there will be a big pack of fruit. In fact, the latter seems to increase steadily whether the crop increases or not. There are an immense number of trees coming into bearing every year and this will be the case for the next ten years. This seems to be usually forgotten when the effect of the unfavorable weather is being discussed. The consumption of tin plate should, under normal circumstances, be larger each succeeding year, and I expect that during the present year it will be from 350,000 to 400,000 cases. This of course assumes that the salmon pack will equal some very sanguine estimates that have been made. As a rule these are more reliable than the pessimistic ones, for the latter are given out year after year with a sort of fatuous regularity only to be belied later on when the returns come in. It is hoped by consumers at this end that there will be no further advance in prices, as neither salmon nor fruit can stand much of an advance at present, and as competition in both lines despite new combinations is constantly becoming keener there is no particular hope of higher prices in the future. Tin plate is the principal article in the market now. As to the rest, pig iron, nails, wire, pipe, &c., they are very firm, while trade in them is looking up. J. O. L.

A plant for the manufacture of horseshoes is projected at Maysville, Ky., by B. J. Malone.

The Pratt & Whitney Company.

At a meeting of the Board of Directors of the Pratt & Whitney Company held at Hartford, Conn., March 24, the following officers were elected: Amos Whitney, president; Rowland Swift, vice-president; Roswell F. Blodgett, secretary, and J. C. Stirling, treasurer. The office of the second vice-president, lately held by George W. M. Reed, was not filled. The same men who constituted the Executive Board last year were re-elected. Previous to the directors' meeting, a meeting of the stockholders took place, which was largely attended, 15,000 shares of capital stock being represented. The treasurer's report showed that the sales for the past year amounted to $1,315,603.10, a net profit for the year of $882,940.71. The following are the directors for the coming year: Francis A. Pratt, Amos Whitney, Roswell F. Blodgett, Rowland Swift, William Waldo Hyde, J. R. Refield, George W. M. Reed, Frank C. Sumner, Daniel R. Howe of Hartford; C. C. Cuyler, A. C. Vaughn and Robert S. Walker of New York, and T. J. Nicholl of Rochester. Mr. Nicholl, who is the new managing director, takes the place of Gen. H. J. Morse of New York on the board.

Duquesne Record Breaking.—The Duquesne Steel Works plant of the Carnegie Steel Company, Limited, broke all previous records for ingots and finished material on Monday last, March 20. The converting mill produced:

	Heats.	Tons of ingots.
No. 1 turn	105	1,013
No. 2 turn	116	1,126
Totals	221	2,139

The rolling mill produced:

	Heats.	Tons.
No. 1 turn	114	955
No. 2 turn	118¾	1,032
Totals	232¾	1,987

consisting of 4 x 4, 1⅝ x 1⅝, and 2 x 2 inch billets and splice bars. On Tuesday, March 21, the best previous records of Monday were eclipsed in the converting mill, viz.:

	Heats.	Tons.
No. 1 turn	119	1,143
No. 2 turn	118	1,125
Totals	237	2,268

The Engineers' Society of Western Pennsylvania.—The regular monthly meeting of the Engineers' Society of Western Pennsylvania was held on Tuesday evening, March 21, at 410 Penn avenue, Pittsburgh. The following were elected to membership: James Bonar, manager for James Bonar & Co.; Joseph Fawell, chief mechanical engineer for Mackintosh, Hemphill & Co.; Michael Greenwood, agent for Laidlaw Dunn Gordon Company; Arthur Herschmann of William Sellers & Co.; Res James, superintendent of the open hearth department, Carnegie Steel Company, Limited; I. Walter Jenks, superintendent of the La Belle Steel Works; John W. Parker, chief inspector of the Carnegie Steel Company, Limited; Henry B. Prather mechanical engineer and local manager of the Buffalo Forge Company; J. H. Schlieper, mechanical engineer and manager of the Pittsburgh Feed Water Heater Company; J. E. Schwab, general superintendent of the Duquesne Steel Works, and Loren H. Turner, superintendent of motive power for the Pittsburgh & Lake Erie Railroad. Chester B. Albree read a paper on "The Use, Design and Manufacture of Iron in Ornaments."

Information Wanted.—Who produces papier maché or makes machinery for its manufacture?

An amicable adjustment of the dispute between the iron molders and founders of the Cincinnati, Ohio, district was come to last week, resulting in a 10 per cent. increase in wages, to go into effect on May 1. The agreement binds both parties until March 31, 1900, and prescribes that a notice of 30 days must be given of any intention to change. Several thousand men are affected by the change.

A syndicate composed of Eastern and Canadian capitalists have just purchased a large body of coal, iron and timber land in Eastern Kentucky, running through three counties and aggregating 340,000 acres. The coal veins are stated to run from 6 to 13 feet, and the coal makes a very high grade coke. The land represents the holdings of a number of separate interests.

The International Cement Company have been formed with a capital of $25,000,000 of 7 per cent. preferred stock, and a like amount of common stock. All the manufacturers of Portland cement, with the possible exception of one leading company in the Lehigh Valley, have entered this consolidation.

Inflation and Contraction.

Some kind of a regulator seems to be imperatively needed by the business interests of this country. Taking their individual predilections, it will be conceded that the manufacturers, merchants and bankers are conservative. The great majority are undoubtedly in favor of a steady volume of business with moderate profits. They decry booms and wild speculation. They preach moderation, and some of them have undoubtedly made sacrifices in endeavoring to check the current of business when they thought it was becoming too rapid. Marked instances of this character were observed last year. Yet, notwithstanding such efforts, we are now in the midst of a movement which bids fair to equal if not surpass all previous periods of inflation that have swept over the United States. It would seem as if the conservatism of our foremost business men should have been sufficiently powerful to regulate commercial currents. Why have they not been able to do this?

The answer is probably found in the fact that each period of reviving prosperity after a depression develops a fresh brand of inflation or speculation against which previous experience provides no safeguard. Thus at one time we find a craze for the establishment of banks to issue currency in the backwoods, at another time a fever for buying up farm lands, again a great boom in city real estate and town lots, then a rampant desire to consolidate railroad systems, next a wild race to build new railroads, then a rage for mining investments, again a passion to build great cities in a wilderness, then an industrial boom in building manufacturing establishments by local bonuses. All these developments of the speculative instinct in the masses were followed in due time by commercial depressions, some of them leading to serious financial disturbances, taking several years of pinching economy for the nation's recovery. Valuable lessons were supposed to have been learned on every such occasion which would be of service to future generations of business men to the end of time. But the genius of speculation does not assume the same shape twice, and weak human nature succumbs whenever confronted with a new appearance in seductive guise.

Prudent people are now thinking that they recognize in the continued formation of great consolidations our old evil genius, whose insidious work will result some fine day in a great crash, leaving the usual financial wrecks and taking another wearisome period for recovery. Some excellent projects of this character have been and are being formed which will be able to earn good dividends for their stockholders in depressed as well as in active times. But many others have been organized more for the sale of securities than to conduct a legitimate business, and it is difficult for the public to discriminate. They are being loaded with securities of this kind, and much capital is thus being withdrawn from perhaps more natural uses to sustain a condition which, to draw it mildly may be described as somewhat artificial. If the mania for consolidations could now be checked by the refusal of the people to support new schemes by buying their securities the danger of a crash would be averted. Those securities which have been issued would not in themselves cause serious financial disturbance, and in time their values would find their proper level according to the earning capacity of the properties represented. But the movement goes on. The manufacturing of industrial consolidations seems as active as ever. A bewildering variety of new projects comes out almost daily. The end will probably be found in the failure of some important financial institution which has underwritten a greater load of such securities than it can carry. Or it may be precipitated by some astute prosecuting attorney or attorney-general who finds a vulnerable point of attack which may excite apprehension among the holders of consolidation securities and cause them to unload in a panic of fear. The possibility of such a catastrophe is already causing shrewd business men to fortify themselves as much as they can by reducing their obligations. Should such caution become general the apprehended crisis will not take place. The fever of speculation will subside without a crash, and our prosperity will not be painfully interrupted.

Our Open Hearth Steel Industry.

Although a liberal increase in the production of open hearth steel during 1898 was expected by the steel trade, we doubt whether many were prepared for the great jump in the output which has been shown to have taken place by the official statistics which we print elsewhere. An increase of 611,821 gross tons in one year, making the total for 1898 2,220,492 tons, or close to one-third that of the make of Bessemer steel, is certainly an astonishing record. The greater part of the increase is due to the growth in the manufacture of basic open hearth steel. This was 503,369 tons out of 611,821 tons, carrying up the total of basic open hearth steel to 1,559,412 tons for 1898.

There are several causes which may be pointed to as contributing to the development of the basic open hearth steel process in this country, causes whose potent influence is expected to give a further growth, even at the expense of the manufacturer of Bessemer steel. Foremost among them is the fact that the off-Bessemer ores of the Lake Superior iron ranges have been produced in such growing quantities that the price has been very low, making it possible to produce the pig iron very cheaply. The capacity to handle a very much larger range of quality of scrap has aided in the same direction. Then, generally speaking, open hearth steel practice, neglected until recent years so far as handling materials is concerned, has been rapidly improved. The statement has been repeatedly made—and the action of some large concerns in increasing open hearth plant seems to confirm the statement—that basic open hearth ingots are being made quite as cheaply as Bessemer ingots. What influence in this direction will be exerted if the experiments in the direction of the continuous process turn out successfully remains to be seen. There are many who believe that this improvement will be epoch making.

There is another advantage which the basic open hearth process possesses which is likely to stimulate the production of steel in this manner. The unit of plant is a small one. While no one would think to-

day of building a Bessemer plant of a capacity less than 1000 tons per day, open hearth steel can be made quite cheaply in a small plant of four furnaces capable of producing 2500 to 3000 tons per week. With large consolidations in control of Bessemer plants smaller rivals of them could make themselves independent for their steel supply. Besides, in certain parts of the country with a large scrap market to draw upon they could probably get their chief raw material very cheaply. Some isolated plants of this character have proved very successful in recent years.

Then, of course, the current year is to witness the start on a large scale of basic open hearth steel manufacture in the South. This, with the new plants and extensions in other parts of the country, will considerably increase the product, and we hope soon to catch up with the British steel makers.

It may be of interest in this connection, now that we have the statistics, to compare our steel product with that of Great Britain in 1898. The figures are:

Steel Production in 1898.

	United States. Tons.	Great Britain. Tons.
Bessemer steel ingots	6,609,017	1,759,386
Open hearth ingots	2,220,492	2,806,600
Total	8,829,509	4,565,986

In conclusion one interesting fact may be referred to, and that is while in 1897 the production of basic pig in this country, 556,391 tons, represented 52.7 per cent. of the product of ingots in 1898, the product of pig, 785,444 tons, represented only 50.4 per cent. Since presumably a larger amount of basic pig was exported in 1898 than in 1897, do these figures indicate that the proportion of scrap carried in our open hearth furnaces is growing?

Apprehensions Regarding Banking Reform.

The members of the majority party in the last House of Representatives created a committee, consisting of gentlemen who were members of the House then in existence and would be members of the next Congress, to see what could be done in regard to currency legislation at the next session of Congress. One of the members has been canvassing the bankers of his State, a Western State with a large sound money sentiment, to ascertain their opinions and wishes. The two important facts he secured were that there exists, first, a very general conviction that the Government must maintain all of its monetary issues at par in gold—that is, it must permit no change in the unit of value, and not even the fear of any change—and that there is, secondly, a good deal of opposition to the proposal to base bank currency upon the general assets of the bank instead of on a deposit of bonds.

There is a close connection between any substantial reform of the national currency and this proposed change of the security of bank currency, which excites opposition mainly because it is a departure from a system we are familiar with. The most important reform to be effected in national currency is the withdrawal—very gradually, probably, but the withdrawal in the next few years—of the legal tender notes, and if these notes be withdrawn there must be an issue of bank notes to take their place. Since the volume of the national debt is destined to diminish, and since the net return on an investment in Government bonds is declining, the circulation of the national banks is tending downward. It is true that it moves occasionally in an upward direction under the influence of forces that cannot act very long or very far. The permanent forces affecting the currency tend to reduce the amount of circulation based upon bonds in spite of increasing population and increasing business.

The objections to the substitution of general assets for bonds as note security are in the main two—one is that such a security will not secure and the other is that the note holders should have no preference over depositors as creditors of banks. It is generally, but not always, assumed as a part of the general assets proposition that the notes should be a first lien upon all the assets of a bank.

As to the first objection, comparisons which have been made with great care between the assets and the circulation of failed national banks leave no doubt that a very small safety fund, or similar device, would make all the notes absolutely secure, and the cost of what might be called the co operative insurance between the banks would be so very small that it would offer no obstacle whatever to the plan. Were each bank responsible for its own circulation there might occasionally be some danger, but with the guarantee of Governmental inspection and control against over-issues of notes the associated banks of issue could very well afford to guarantee the public against loss on circulation by the failure of any individual bank. The public needs to be reminded many times that in this and many other States there was a considerable period of sound banking under State laws after the "wildcat and red dog" era, and before the national bank era. The problem of a safe bank currency was not solved by the Federal Government, but by State governments, and was solved many years before the national bank law. The requirement that bonds should be deposited was not designed to protect the public against bad money, but to compel the banks to lend their capital to the nation when it was greatly needed. The prohibition against State bank circulation was not at first proposed. The State bank circulations were afterward taxed out of existence because they were so good that they prevented the circulation of national bank notes, and in order to force a market for its bonds the Government determined that notes secured by national bonds should have a monopoly. The aversion now encountered to a bank currency secured by general assets is due to the entirely erroneous impression that the "wildcat" banking era did not end till the Civil War, and was only terminated by the introduction of notes secured by a deposit of national bonds.

As to the other objection, there are reasons of more or less validity why the note holder should be preferred to the depositor; the latter has some and the former has no means of knowing anything of the bank he is asked to trust. But whether this reason be sufficient or not, the conspicuous fact is that under the national bank system the note holder is preferred to the depositor. Before a bank can issue any notes the Government takes a portion of its assets greater than the notes to be issued and holds those assets for the exclusive protection of the note holders.

Neither of the propositions to which objection is oftenest made is new or untried or has been discredited by experience. Here and elsewhere the general assets have been found an ample security for the note holders, while making the note holders preferred creditors is not even going back to the practice of 40 years ago; it is but continuing what has always been the practice under the national bank law.

The agitation for better country roads in Indiana and Illinois is bearing good fruit. A single township in Indiana recently voted to expend $43,000 in building

36 miles of macadam roads, and others have decided to expend considerable amounts for the same purpose. The Illinois Legislature is about to enact a law which is also expected to greatly stimulate the improvement of country roads in that State. The railroad companies are in strong sympathy with the movement, as their traffic is frequently reduced considerably when country roads are in bad condition for hauling.

The Growing Interest in Iron Ore Property.

Circumstances of the late months have put a stop to the cry of a few years ago that there was so much iron ore in sight since the discovery of the Mesaba range that it would never be worth anything again. Concerns interested in mining and shipping, more especially those who had heretofore been lukewarm in their interest in ore supplies, have been in the field for ore of late, and there has been quite a little boom in sales of lands on which ore has been proven. As a general thing values are held at pretty reasonable figures, and any tendency toward a cessation of the extraordinary demand for steel or indicating any difficulties in the way, either as to labor or anything else, would depress them, perhaps; but it looks as if there was to be for a long time, probably till the available ore lands are picked up and put out of the way, a market for anything in the lake country that shows indications of becoming a mine, if prices are reasonable.

As the natural result of all this there is a sudden impetus to explorations, and the option broker is abroad in the land. This interest in exploiting new lands is confined not to any one range, or even to the newer ones, but is general to all, and the Menominee and Gogebic are well up to the front.

Another interesting tendency of the day is the evident desire of those ore consumers who have heretofore thought little of their ore supplies and cared less to secure property while there is yet time. Some of these people have made purchases that indicate no very thorough knowledge of the situation nor of what they were buying. Still another tendency is that of collecting under single managements several of the smaller properties that can be worked economically together. This has been done in several instances and is still going on all over the mining regions.

In anticipation of a boom that may never come many are securing options on mining lands, or acreage located on the ranges, and are holding for advances. If anything can kill the movement in iron ore land quicker than another it is this very tendency. Some of the leading concerns in the market for properties are refusing to deal with any but holders of fees direct.

Very large sums of money have been disbursed along the mineral ranges the past few months for properties, for exploratory work, for the cleaning up of old and imperfect titles, for the reduction and arrangement of royalties, and for the collection of groups of properties, and a most healthful condition prevails.

The Pioneer Furnaces.—A report has been given currency that the furnaces and extensive mineral property of the Pioneer Mining & Mfg. Company of Birmingham, Ala., had been acquired by the Federal Steel Company. The report is untrue. The Pioneer property is under option to a consolidation of rolling mill interests now approaching completion.

A movement is on foot to consolidate the blast furnace plants and mineral properties of the Sheffield district in Alabama.

CORRESPONDENCE.

The Loss of Silicon in Annealing Malleable Iron.

To the Editor: I am much interested in the correspondence which has appeared in *The Iron Age* relative to the loss of silicon in annealing malleable iron. Is it not possible that both Mr. Davis and Mr. Wheeler are right, and that the difference which they find is due to the different method which has been employed?

I suggest this, as some years ago, while manager of the Cameron Furnace, I had occasion to make a series of silicon determinations in pig iron, which was remelted a number of times. Unfortunately, the note book in which these results were kept has disappeared, but I remember clearly that, using Drown's method, we found that with each remelt the silicon decreased slightly. These results were afterward checked by determining the silicon in the same samples, by means of chlorine, passing through a combustion tube. The results in this case showed a very material decrease in silicon, and subtracting the figures thus obtained from the silicon, as determined by Drown's method, gave a steadily increasing difference, which I assumed, but could not have an opportunity of proving, was through either the oxidation of the silicon to silica or through the formation of a silicon compound, which was not acted upon by chlorine, and which increased in quantity each time the iron was remelted.

This matter was taken up at the time with R. A. Hadfield, but has never been, to my knowledge, thoroughly investigated. It would seem to me that the matter is of enough consequence to be worthy of a series of careful determinations, as some light may be thrown upon the action of silicon in such instances as your correspondents have cited. HENRY S. FLEMING.

NEW YORK, March 27, 1899.

OBITUARY.

WILLIAM C. COLBURN.

William C. Colburn, president of the Detroit Bridge Works, died in Detroit, Mich., on March 12, aged 65 years.

WILLIAM A. SMITH.

William Allen Smith, well known in the iron and steel trade of New York City, died suddenly on March 24 from an affection of the heart, at his home in New York, at the age of 51 years. He was born at Amherst, Mass., and was the son of the Rev. Dr. Henry B. Smith, the theologian. In 1850 the family moved to New York, and the son spent his boyhood here. In 1868 he was graduated from the Columbia School of Mines. For several years after graduation he lived in Berlin, and acted there as the private secretary to George Bancroft, the United States Minister. After his return to this country he was employed by Cooper, Hewitt & Co. and Phelps, Dodge & Co., in New York. For the last few years he had been with the Harvey Steel Company.

JOSEPH H. JACKSON.

Joseph H. Jackson, who was engaged in the iron business at 208 Franklin street, New York, died from pneumonia on March 23, at his home, in Morristown, N. J., aged 80 years. He was born at Rockaway, N. J., and for a number of years was engaged with his uncle, Colonel Joseph Jackson, in the iron manufacturing business there. In 1848 he went to Maryland and was interested in the Mount Savage Iron Company for ten years.

FRANK CARTER.

Frank Carter, one of the best known mining engineers of Eastern Pennsylvania, died at Pottsville, Pa., March 22, at the age of 65 years. He for many years had charge of the coal lands controlled by the Philadelphia & Mahanoy Coal Company. In 1859 he laid out the town of Mahanoy City. When the Philadelphia & Mahanoy Coal Company sold out to the Reading Coal Company, about 1871, Mr. Carter was appointed land agent for the new company and placed in charge of all their vast estates, which position he held until his death.

RICHARD A. TILGHMAN.

Richard A. Tilghman, inventor of the sand blast and a member of the firm of B. C. & R. A. Tilghman of Philadelphia, died of Bright's disease on March 24, after a prolonged illness. He was born in Philadelphia in 1824 and studied chemistry after graduating from the University of Pennsylvania, which he made his profession. Some years ago he invented the sand blast, and with his brother, Benjamin C. Tilghman, established a large plant in Philadelphia for the manufacture of these machines. Mr. Tilghman was well known as an experimental chemist, and many inventions are credited to him.

JEREMIAH HEAD.

In the death of Jeremiah Head, which occurred at Hastings, England, on March 10, the British iron and steel industry loses one of its foremost representatives. He was born in 1835 at Ipswich, England, and after leaving school was articled to Robert Stephenson, M.P., the celebrated engineer. He served his time at the well-known locomotive and marine engine works at Newcastle-on-Tyne carried on by Stephenson and others, and was afterward promoted to a position on the civil engineering staff, in which he was intrusted with much important work. In 1863, in conjunction with Theodore Fox, Mr. Head built large iron works at Middlesbrough, and carried them on until 1875, soon after which year they sold them and dissolved partnership. Since then Mr. Head, although still deeply interested in the Cleveland iron and steel industries, devoted his time and personal energies almost exclusively to professional engineering. He visited most European countries, more particularly Spain, Norway and Sweden, as well as the United States, and made exhaustive reports on various properties, more especially iron, coal and manganese mines and iron and steel works, for English and foreign clients. He was managing director of the Otis Steel Company of Cleveland, Ohio. As a valuer of technical and other properties Mr. Head had large experience the aggregate amount of what had passed through his hands in this way during the last few years reaching many millions of dollars. As an author of scientific papers Mr. Head was well known. He contributed valuable memoirs and addresses to the British Association, the Institution of Mechanical Engineers, the Iron and Steel Institute, the Cleveland Institute of Engineers, the Sheffield Technical School, and various other societies, as well as numerous articles to current technical literature. He was buried at Highgate Cemetery on March 14.

PARKER P. HOGUE.

Parker P. Hogue, the inventor of the Hogue injector, used on all kinds of boilers, died March 21, at Sandy Lake, Mercer County, Pa. He was for many years engaged in the manufacture of his invention in Cincinnati, Ohio.

HENRY BOLLINCKX.

Henry Bollinckx, the founder and proprietor of the large power transmission machinery works of Brussels, Belgium, died at his home in Cureghem, Belgium, on March 7. He was born in Brussels March 29, 1826. The plant in Brussels is one of the finest of the type in Europe.

Sheet Steel vs. Brass.

Quietly and steadily developments of an interesting character have been taking place in the sheet metal industry. Their effect has been to raise the position of sheet steel as raw material for the stamping industry and make it a growing competitor of sheet brass for all sorts of intricate work for fancy articles. Cold rolled stamping steel is being supplied in rapidly growing quantities for the manufacture of articles of intricate design which had previously been manufactured almost exclusively from brass. Our attention has been called to some specimens of work of this character produced from Swedish cold rolled stamping steel, furnished by the Wilmot & Hobbs Mfg. Company of Bridgeport, Conn. They show filigree work as fine and as elaborate as on many of high grade solid silver spoons and forks. One would scarcely believe that it were possible to work steel in this manner. We understand that the Swedish steel permits punching and stamping work of this character to be done without any extraordinary wear and tear of delicate dies.

An advantage of steel is that the articles produced are considerably stiffer than if made of sheet brass of the same thickness, thus enabling the producer to manufacture his article from steel several gauges lighter than brass and yet have the steel article of the same strength as the heavier brass blanks. We have inspected also samples of copper plated articles made from Swedish steel, which are admirable in color, smoothness and finish.

The Casting Machine at Cambria. — About two months ago Heyl & Patterson, engineers and contractors, Pittsburgh, Pa., installed at the blast furnaces of the Cambria Steel Company, Johnstown, Pa., one of their patented pig iron casting machines manufactured by them. The machine has been in operation for eight or nine weeks and in that time has worked very successfully, the results obtained being entirely satisfactory.

W. K. Bixby, president of the American Car & Foundry Company, is reported as stating that the company have orders in their books aggregating more than $5,000,000. This includes 35,000 cars and 355,000 wheels.

PERSONAL.

Edward M. Allen, formerly engineer in the mechanical department of the Cambria Steel Company, Johnstown, Pa., has resigned to take charge of the engineering department of the Frank-Kneeland Machine Company of Pittsburgh, Pa.

Frank H. Buhl of Sharon, Pa., has returned from a trip to Europe.

The Board of Directors of the Philadelphia Exposition Association have selected John Birkinbine, president of the Franklin Institute, as engineer-in-chief of the mechanical and electrical construction and sanitary engineering of the Exposition of Manufactured Goods to be held in Philadelphia next fall. Edmund A. Felder was appointed as assistant director-general and Benjamin W. Hanna as secretary of the Exposition Association.

Frank T. Bentley, general freight agent of the American Steel & Wire Company, Chicago, has been appointed traffic manager of the Illinois Steel Company, assuming the duties of his new position on the 23d inst.

Stillman W. Wheelock has been appointed manager of the Denver office of the Illinois Steel Company.

George J. Humbert, late president of the Humbert Tin Company of South Connellsville, Pa., whose plant was absorbed by the American Tin Plate Company, has been appointed district manager of the Eastern group of mills owned by the company, including the plants at Connellsville, Demmler, Blairsville, West Newton and Philadelphia, Pa., and that at Cumberland, Md.

W. S. Accles, manager of the foreign branch of the Niles Tool Works Company, with headquarters in London, has returned to his post after a brief business visit.

H. F. Martin, assistant to the president of the Pennsylvania Steel Company, has been appointed general sales agent of the Pennsylvania Steel Company and the Maryland Steel Company, with headquarters at Steelton, Pa.

Willard S. Mattox, the European representative of Rogers, Brown & Co., has returned to his post. He will make his headquarters at London.

Henry Gardner of Merton & Co., the London metal merchants, has returned home after spending six weeks in this country.

John Platt of Thorpe, Platt & Co., the American representatives of John I. Thornycroft & Co., the well known English torpedo boat builders, sails for England on April 1 on the "Umbria," to be there some two months or more. Mr. Platt will investigate the water tube question as far as it relates to big ships.

John Reis, formerly manager of Edith and Rosena furnaces of the Oliver & Snyder Steel Company, but which were purchased by the American Steel & Wire Company, has been made general furnace manager of the National Steel Company.

James O. Nesbitt, master mechanic of the Edgar Thomson Steel Works at Bessemer, Pa., has resigned his position to accept one at Birmingham, Ala.

Geo. J. Humbert, formerly president of the Humbert Tin Plate Company, Connellsville, Pa., before they were taken over by the American Tin Plate Company, has been made district manager of the tin plate mills in the Pittsburgh and Eastern districts. The plants included in Manager Humbert's jurisdiction are as follows: Humbert plant at Connellsville, six mills; United States plant at Demmler, 11 mills; West Newton plant, two mills; Cumberland plant, five mills; Blairsville plant, two mills; Marshall plant at Philadelphia, six mills.

Bernard Goldsmith, who was formerly district manager, has been put in charge of the plant at Elwood, Ind., containing 26 mills.

R. C. Penney has resigned as general manager of the Union Iron Works of Bangor, Maine, to take effect on April 1. Mr. Penney proposed to take a rest for a few months, and will visit the South and West.

The Federal Steel Company.—Quite extensive improvements are to be made at the plants of the Federal Steel Company. Two modern blast furnaces are to be built at South Chicago and a number of other improvements are to be made at the Chicago and Milwaukee plants. In addition to the two new steamers for the ore trade, ordered about 60 days since, the Federal Steel Company have bought two modern steamers and have just ordered two additional boats from the Chicago Ship Building Company.

Trade Publications.

Rock Drills.—A small pamphlet has been received from the Ingersoll-Sergeant Drill Company, 26 Cortlandt street, New York. The company make four types of rock drills—namely, Ingersoll Eclipse, the New Ingersoll, the Sergeant, and the Arc Valve Tappet. The New Ingersoll has been developed by recent experience, and was perfected during the latter part of the year 1897. It combines the best features of both the Ingersoll and the Sergeant. It has compound valve and the release rotation. It strikes an uncushioned blow and has a variable stroke. It is the best all around drill, being adapted for both steam and air and for hard, soft or broken rock.

Chain Saw Mortisers; Steam Engines.—Catalogues have been received from the New Britain Machine Company of New Britain, Conn., describing their chain saw mortisers, band saw guides, and the Case automatic high speed engine. In the first the mortise is formed by an endless chain, each link of which has a sharpened tooth so formed as to carry out its own chip. The chain travels approximately 1500 feet a minute, during which time 40,000 teeth are presented to the work, and while one tooth removes but a small amount of material the aggregate cut of all the teeth exceeds that done by other mechanisms.

Planers.—A circular from the Cincinnati Planer Company of Cincinnati describes their new 30 and 33 inch planers, which embody all the good features suggested by the long experience of this company in the manufacture of tools of this type.

Electric Motors.—The Sprague Electric Company of 20 Broad street, New York, have issued a handsomely illustrated pamphlet dealing with the Lundell motor. The engravings show the various steps in the manufacture of the motor and its application to a wide line of machinery.

Steam Engines—The Standard slide valve engine manufactured by the George B. Sennett Company of Youngstown, Ohio, is described in a catalogue. The engine is completely self contained, has a solid steel center crank shaft. It is made with the most improved special machinery and a complete set of jigs and templets to insure the interchangeability of all parts. Tests of the engine at half and full work show it to be as efficient as a high grade automatic. Every engine is thoroughly tested before leaving the works and is guaranteed.

Air Compressors and Hoists.—In a recent catalogue the Curtis & Company Mfg. Company of St. Louis describe their air compressors, air hoists and air appliances. Their automatic air compressors are especially designed for machine shops, boiler shops, shipyards and other places where a steady or intermittent supply of compressed air is required. The governor is designed to automatically maintain any desired air pressure. It will instantly respond to the slightest change in pressure in the reservoir. The compressors are power and steam driven. Their air hoists are made in all sizes from 3 to 30 inches in diameter and all lengths. Cylinders up to and including 4 inches are made of seamless drawn brass tube, while the larger sizes are made of special steel tube accurately bored and polished. These hoists are intended for attachment to hand cranes and for special purposes.

Steam Pumps, Governors and Valves.—The Gardner Governor Company of Quincy, Ill., describe their various products in a catalogue. Among those mentioned are duplex steam pumps, boiler feeders, fire pumps, compound pumps, and so on. Their pump governor or pressure regulator can be set at any desired pressure, which it will maintain with but very slight variation, thereby preventing the danger from bursting pipes and holes arising from violent shocks or jars due to excessive pressures. It is used largely on fire, water works, and elevator pumps, and in many other places where uniform pressures are desirable and where excessive pressures might prove injurious. Besides saving unnecessary wear and tear of costly machinery, it is economical in reducing the fuel consumption.

Bolt and Nut and Forging Machines.—A very complete catalogue has been issued by the Acme Machinery Company of Cleveland, Ohio, describing their bolt cutters, nut tappers, bolt heading and forging machines. Their bolt cutters have four dies to each set, made of market size tool steel, carefully ground to standard gauges, and made to fit the hardened tool steel bushings in the die head. Being plain in shape, they can be made in any machine shop by an ordinary mechanic at trifling cost. Their die head consists of three principal parts—namely, a barrel, a die ring and a clutch ring. The barrel is made of cast iron, turned, milled and bored perfectly true. To the front end is fastened a face plate which serves to hold the dies and die bushings in place. In the outer surface of the barrel are four longitudinal grooves milled to within a short distance of the flange, and in these are fitted two tool strips hardened and ground to resist the wear of the sliding die ring. These strips are fastened to the barrel with screws, so that even after years of service all wear between the die ring and barrel can be taken up. The die ring is also of cast iron, the inner surface having tooled steel strips, hardened and ground to correspond with those of the barrel. This ring controls the movement of the dies radially by means of recesses milled at an angle from its face. The bottoms of these recesses are lined with tool steel to resist the wear of the hardened steel die caps. A clutch ring made of cast iron has an annular groove to receive a phosphor bronze ring that is attached to the automatic opening and closing device. The movement of this ring is transmitted to the die ring through a rocking level and toggle. The adjusting screw is made with a fine thread, so that bolts may be cut to the exact size required, and when adjusted it is clamped firmly to place by means of a threaded bushing. All these die heads are supplied with an index, and when a record is kept of the dies the die head may be set to cut the required size without the necessity of making several trial cuts to accomplish that end.

Ball and Roller Bearings.—A very complete catalogue by the Ball Bearing Company of Watson street, Boston, has been prepared, illustrating and describing the various types of ball and roller bearings made by them. These include thrust collar bearings for drill spindles, step bearings for heavy pressures, ball and roller shaft bearings, roller bearing hangers, &c. The company carry in stock a full line of specially gauged steel balls which are warranted true to size and superior in material and finish.

Valves.—Valves of all kinds and for all purposes are fully described in a catalogue by Jenkins Brothers, 71 John street, New York. The valves manufactured by this company are of their special pattern, contain valuable improvements, and are made of the best metal for the purpose. Their iron body valves have been improved by increasing the thickness of flanges and adding more bolts, thereby making them suitable for either high or low steam pressure. The Jenkins disks have also been improved. They will stand high pressure steam and are superior in every way. Their standard packing, for its various uses, has also been improved.

The National Graphite Company.—This is the style under which papers of incorporation were filed in the State of New Jersey last week. It is stated in the trade that the purpose of the company is the extensive manufacture of artificial graphite under the process invented by E. G. Acheson, who is the president of the Carborundum Company, Niagara Falls, N. Y. It is denied that any attempt has been made to consolidate the large producers or users of graphite.

The Armor Plate Order.—WASHINGTON, D. C., March 29, 1899. (*By Telegraph.*)—Acting Secretary of the Navy Allen to-day decided to approve a circular prepared by the Bureau of Ordnance advertising for bids for 24,000 tons of armor at an average price of about $340 per ton. This price is based upon the 10,000 tons authorized for the ships provided in the naval appropriation act of 1898 at $400 per ton and the 14,000 tons for the ships provided in the recent act of 1899 at $300 per ton. The total amount of the contracts will be about $8,000,000, the deliveries ranging from one to three years. The tests prescribed are 25 per cent. higher than those heretofore provided and are intended to cover the ballistic qualities of so-called Krupp armor.

A Coke Land Purchase.—PITTSBURGH, March 29, 1899. (*By Telegraph.*)—A deed for the 1250 acres of coking coal land sold by H. C. Frick to the Continental Coke Company of Uniontown, Pa., an interest of the National Steel Company, was placed on record at Uniontown on Tuesday, March 28. The consideration was $1,250,000. The National Steel Company will erect coke ovens on this property and make coke for their own blast furnaces.

Prince Hilkoff, the Russian Minister of Railways and Telegraphs, says that when the Trans-Siberian Railway is finished it will be possible to travel around the world in 33 days, as follows: Bremen to St. Petersburg, one and one-half days; St. Petersburg to Vladivostock, traveling by rail at the rate of 32 miles an hour, ten days; Vladivostock to San Francisco by steamer, ten days; San Francisco to New York by rail, four and one-half days; New York to Bremen by steamer, seven days. It is not so long ago since Jules Verne's famous story of an 80-day tour of the globe was regarded as a stretch of the imagination. We have gone far indeed in rapid travel since those days.

MANUFACTURING.

Iron and Steel.

The 30-mill plant of the Shenango works of the American Tin Plate Company, at New Castle, Pa., is expected to commence operations on Monday, April 3. At the start only the new mills will be put in operation and the balance will be started as soon as possible. The first week or two of operation will be devoted to trying the machinery.

Jones & Laughlins, Limited, of Pittsburgh will advance wages of day laborers 10 per cent. about April 15, wages of the tonnage men employed by this concern having also been materially increased recently by reason of the heavy increase in output. Every department of the large works of this concern on the South Side, Pittsburgh, is in full operation, and the firm have orders enough to take practically their entire output for the next two or three months.

The Tyler Tube & Pipe Company of Washington, Pa., have increased wages of their employees 10 per cent., taking effect April 3.

At Lisbon, Ohio, deeds have been filed transferring the plant of the Beaver Tin Plate Company to the American Tin Plate Company, the consideration being $284,000.

The Lockhart Iron & Steel Company, at McKee's Rocks, Pa., have advanced wages of their puddlers 25 cents a ton. A further advance to other employees of this plant will be given in a short time.

Cumberland Furnace of the Buffalo Iron Company, at Cumberland Furnace P. O., Tenn., is expected to be put in blast about June 1 by Jos. Warner and J. A. Cooper. The product will be charcoal pig iron and the furnace has a capacity of about 275 tons weekly. The stack has been idle since 1893.

It is not probable that Bellefonte Furnace of the Means & Russell Iron Company of Ashland, Ky., will ever go in blast again. The furnace has been idle since 1893.

Fannie Furnace, at West Middlesex, Pa., which has been idle since 1896, is being repaired and will probably be ready for blast early in May. The stack will be operated by the Reed Furnace Company, recently organized. The stack has a daily capacity of about 150 tons.

The West Penn Sheet Steel Company, recently organized at Pittsburgh, have purchased and put in operation the West Penn Steel Works, at Leechburg, Pa., which was operated for a short time last year by Kirkpatrick & Co., Limited, of Pittsburgh, under lease. The new company will manufacture fine grades of sheet steel for galvanizing, enameling and other purposes. The officers are Jos. G. Beale, president; James B. Kifer, secretary; John R. Klingelsmith, treasurer, and Harry W. Beale, superintendent.

The P. L. Kimberly Company, Sharon, Pa., manufacturers of iron and steel, started up their 8-inch mill on Thursday, March 23, and have since started up their 9-inch mill. This plant had been idle for a long time.

J. M. Thomas, who sold the Thomas Furnace at Niles to the National Steel Company, has purchased the West Duluth Furnace, at West Duluth, Minn. He expects to blow in the furnace in about 60 days.

The Cumberland Rolling Mill, at Cumberland, Md., formerly operated by the Baltimore & Ohio Railroad in the manufacture of steel rails, has been leased to S. J. McFerran, who will manufacture bar iron, plates and re-roll old steel rails. The plant will be repaired and put in operation as soon as possible. T. S. B. Wood of Wheatland, Pa., will be manager.

Morgan Construction Company of Worcester, Mass., have recently closed a contract for the installation of a Morgan continuous rod mill of their latest type for Grand Crossing Tack Company of Chicago, Ill.

The completion of the rod mill of the Dillon-Griswold Wire Company, Sterling, Ill., has been delayed by unfavorable weather and it may not be in operation until late in April.

Among recently licensed corporations in Illinois is the United States Steel Castings Company, at Chicago: capital stock, $400,000; manufacturing; incorporators, C. F. Springer, Albert H. Putney, Percival Steele.

The Pacific Nail & Iron Company, San Francisco, Cal., have transferred their property to the Balfour-Guthrie Investment Company. The consideration named in the deed is $15,000. The works are equipped for drawing wire and rolling nail plate, and manufacturing both wire nails and cut nails.

The citizens of Peru, Ind., are greatly interested in a project to establish at that point a plant for the manufacture of steel castings.

The Burgess Steel & Iron Works, Portsmouth, Ohio, have increased their capital stock from $150,000 to $500,000.

The Illinois Steel Company's new slabbing mill at their South Chicago works has been started with much less trouble than is usually experienced in getting heavy machinery of this character in working order. The officers of the company are delighted with it. Some little time has been required to organize a working force so that hitherto the mill has been run on day turn only, but it is now to be run double turn. The output of the plate mill will be greatly increased by this auxiliary plant, but it will roll billets as well as slabs, thus furnishing open hearth stock for the company's merchant bar mills.

A new steel casting company have been organized at Pittsburgh, but a name has not yet been adopted. They may be called the Pittsburgh Steel Casting Company, Limited, but this is not certain. The company have a capitalization of $75,000. Chas. D. Marshall, secretary of the Shiffler Bridge Company, Pittsburgh, is president; Uriah Tinker of Samuel Trethewey & Co., Limited, of Pittsburgh is treasurer, and C. C. Smith, formerly of the Reliance Steel Casting Company of Pittsburgh is secretary. The superintendent will be Howard Fisher, formerly of McConway-Torley Company, also of Pittsburgh. The plant will be located at Sharpsburg, just outside of Pittsburgh, and the main building will be 125 x 240 feet. A 15-ton furnace will be erected, and the building will be equipped with a 20-ton and a 10-ton traveling crane. In fact, the entire equipment will be electric as far as possible. Work on the plant will be pushed as fast as possible, and the concern expect to be in the market as makers of steel castings about July 1 next.

Wages of laborers employed at the Pittsburgh Steel Works of Anderson, Dupuy & Co., at McKee's Rocks, Pa., have been advanced from $1.25 to $1.35 per day.

The Brown-Bonnell Iron Company, Youngstown, Ohio, have under consideration the blowing in of their Phœnix Furnace to supply them with mill iron. The stack has been idle for a long time, but can be prepared for blast very quickly. There has been a continued scarcity of forge iron in the Valleys for some time, and this concern have felt it along with other makers of iron bars in that vicinity.

Zug & Co., Limited, Pittsburgh, have given their employees, aside from the tonnage men, an advance in wages ranging from 5 to 10 per cent.

The Wheeling Steel & Iron Company of Wheeling, W. Va., have granted their employees an advance in wages ranging from 8 to 15 per cent. The advance affects day laborers and tonnage men alike.

No. 1 Furnace of the Andrews & Hitchcock Iron Company, at Youngstown, Ohio, which met with an accident some time ago, necessitating its blowing out, is being rapidly repaired and will be put in operation as soon as possible.

The Mahoning Valley Iron Company, Youngstown, Ohio, will start up their nail plate mill and 55 cut nail machines in a short time.

R. C. Neal & Co. of Harrisburg, Pa., who have had an option on the Hollidaysburg rolling mill for some time, have had it extended until May 1.

The Lockhart Iron & Steel Company of Pittsburgh are running their plant double turn and are well supplied with orders. They have no addition to their plant under consideration, nor do they contemplate the purchase of any additional ground as reported. Should an enlargement of the plant be decided upon, it would not be necessary to purchase more ground, as they already have a considerable lot of ground which they are not using. This concern are now paying their puddlers $4.25 a ton, or 25 cents a ton higher than puddlers receive working under the Amalgamated Association scale.

Machinery.

The Mercer Machine & Steel Casting Company have been organized at Mercer, Pa., and a works will be erected as soon as possible.

At the works of the Westinghouse Air Brake Company, at Wilmerding, Pa., it is proposed to discard the use of steam engines and substitute electric motors. The main power will be supplied by a recently patented turbine motor of 400 horsepower.

The Belle City Malleable Iron Company, Racine Wis., have completed the last part of their new factory, replacing their old foundry recently destroyed by fire. They now have all departments in full working order and are running four nights each week. Business was never so satisfactory with them as now, having more orders than they can complete.

Wickes Bros., Saginaw, Mich., boiler and machinery manufacturers, have purchased additional ground to make an extensive enlargement of their plant. They are very busy at present, having some large orders to be filled.

Pawling & Harnischfeger, Milwaukee, Wis., are building an additional erecting floor and machine shop, to provide increased facilities for the manufacture of traveling cranes. The building will be a brick structure, 50 x 125 feet, consisting of three stories and a basement. An erroneous report has been in circulation that they proposed to build a foundry.

The Hendee Wire Brush Company, Milwaukee, Wis., are manufacturing the Badger brand belt filling, for which they claim specially valuable qualities in making leather belting last longer, have a better surface and immensely increase its driving capacity by preventing belts from slipping or running unevenly on the pulleys.

The Cullen & Stock Heating & Ventilating Company, St. Louis, sales agents for the Snow Steam Pump Works, Buffalo, have secured an order from the St. Charles (Mo.) Water & Im-

provement Company for a 2,000,000-gallon six-cylinder triple expansion duplex direct acting pumping engine.

The Emerson Mfg. Company, Rockford, Ill., have decided to build a new foundry this summer.

E. C. Teuscher, formerly of Todds & Stanley Mill Furnishing Company, St. Louis, has associated himself with his son, under the firm name of Teuscher & Son Machinery Company.

The Sterling Emery Wheel Mfg. Company, Tiffin, Ohio, state that their foreign and domestic trade was never so heavy as at the present time, and orders are still coming in freely, so much so as to really be on the increase.

Bridges.

A meeting of the stockholders of the Schultz Bridge & Iron Company, McKee's Rocks, Pa., will be held in a few days, for the purpose of voting for or against an increase in the capital stock of the company. It is probable this concern will make very extensive additions to their plant, almost doubling the capacity.

Hardware.

Wormhoudt Brothers have established a factory at Ottumwa, Iowa, for the manufacture of the Day patent curry comb.

The Capewell Horse Nail Company, Hartford, Conn., are having plans drawn for large additions to their works and have placed an order for a large amount of new machinery. They refer to the outlook for business as even better than 1898.

C. A. Leffler, Berea, Ohio, manufacturer of animal pokes and Buckeye sash locks, has completed his new building and is about starting the machinery.

The Illinois Cutlery Company, Decatur, Ill., are developing an extensive foreign trade in connection with the growing domestic business they now enjoy in bread knives, slaw cutters, paring knives and other hardware specialties. It is interesting to note that their goods are now finding favor in Adelaide, Australia; Dunedin, New Zealand; Callao, Peru, and Cairo, Egypt.

The H. H. Brown Mfg. Company, Decatur, Ill., are at the close of a brisk season's business. They inform us that an interesting feature of their cattle dehorner trade has been the foreign shipments. Among the points we note Cape Town, South Africa; Christ Church, New Zealand; Sydney and Adelaide, Australia; Buenos Aires, Argentine Republic; Glasgow, Scotland.

Wrightsville Hardware Company, Wrightsville, Pa., are laying the foundations for two new buildings, which will materially increase the capacity of their plant.

The D. W. Bosley Company, Chicago, Ill., advise us that on April 1 they will ship to Holland about 20,000 feet of weather strip. The company state that they already have an established trade in Great Britain, where they have a London office, but have only recently marketed the goods on the Continent.

The New Castle Shovel Company, New Castle, Pa., have made some additions to their machinery over what was first contemplated, and are rushing their work on the new buildings so that they may be completed at the earliest possible moment.

Miscellaneous.

The entire plant and business, including patents, of the Armorite Interior Conduit Company of Pittsburgh have been sold by Wm. H. Latshaw, W. B. Rhodes and Martin M. Shaw to the Safety Conduit Company of Rankin, Pa., and the capital of the latter concern will be increased to $250,000. The output of the plant at Rankin will be largely increased and is expected to reach 50,000 feet of conduit a day. The new company will control the output of the conduits in the United States, and the industry promises to become an extensive and important one. Almost all of the large office buildings in New York and other large cities recently erected have been fitted up with conduits made by this concern. The only other large conduit company in the country is the Interior Conduit Company of New York City, and it is stated that the business of this concern may also be purchased at an early date.

The Herr Coal & Coke Company of Martinsburg, W. Va., have been granted a charter of incorporation, with a capital of $50,000 and privilege of increasing to $500,000. The company have been formed for the purpose of dealing in coal and coke, coal and timber lands and their products. The incorporators are H. B. Herr and Benjamin Snavely of Lime Valley, Pa.; D. J. Herr of Refton, Pa.; Charles E. Shank and E. B. Shank of Millersville, Pa. The principal office is to be in Martinsburg.

The Pittsburgh Reduction Company, Pittsburgh, Pa., manufacturers of aluminum, state that business in aluminum wire is growing considerably and that they are doubling their capacity for furnishing material, orders for the necessary additional equipment having just been placed.

The Washington Coal & Coke Company, with sales offices in the Conestoga Building, Pittsburgh, have placed a contract with Bennett & Talbot, Greensburg, Pa., for the erection of 150 coke ovens at Star Junction, Fayette County, Pa.

The Fox Pressed Steel Car Company, at Pittsburgh, owned by the Pressed Steel Car Company, have given their employees an advance in wages of 10 per cent.

Some large Pittsburgh coal operators have been awarded the contract to supply lines of the Vanderbilt railroad system for their locomotive coal for the year. Contracts have been apportioned between Osborne, Saeger & Co., Morgan, Moore & Bayne, H. K. Wick Fuel Company, the Sheppler Gas Coal Company and the Johnson Coal Mining Company.

The Copper & Steel Welding Company have been organized at Galesburg, Ill.; capital stock, $15,000; welding copper and steel; incorporators, Thomas W. Peterson, C. J. Munson, P. N. Granville.

The Lappan Brake Shoe Company, The Rookery, Chicago, have arranged with the Griffin Wheel Company to manufacture their brake shoes. They thus secure the advantage of the great facilities of the Griffin Wheel Company, with their leading plant in Chicago and other plants at various cities in the West, which will enable shipments to be made from the point most advantageous to the railroad company making purchases.

THE WEEK.

What will be one of the largest steel chimneys in the world is to be erected at Laurel Hill, L. I., for the Nicholas Chemical Works, which are located on Newtown Creek. According to the plans filed with the Building Department at Jamaica, the chimney is to be 315 feet high and 36 feet in diameter, and its construction will take about 231,700 pounds of steel, at a cost of $10,000.

The order for locomotives for the Midland Railway of England, recently placed with the Baldwin Locomotive Works, Philadelphia, has been followed by an order from that country for 20 locomotives, for the Great Northern Railroad of England. The order is the result of a visit made to the Baldwin Works lately by one of the directors of the last named company.

A dispatch from St. Petersburg reports that M. de Witte, the Russian Minister of Finance, addressing, a few days ago, the commission charged with the regulation of the corn trade, urged the promotion of an influx of foreign capital, which would lead to the creation of industries in Russia instead of compelling the country, as at present, to import foreign products to the amount of hundreds of millions of dollars annually.

At the Bon Air mine, at Leadville, Col., on March 10, two pumpmen working on the 430-foot level were caught by a cave-in near the top of the shaft and completely cut off. Fortunately the big water pipe was not broken by the cave-in, and by blowing a hole in it with dynamite the men were able to communicate with their friends, who kept them supplied with food while a new shaft over 200 feet deep was sunk for their rescue. The men were extricated on March 23, after 13 days' incarceration, none the worse for their remarkable experience. The cost of rescuing the men was over $3000.

Representatives of leading safe making concerns met a few days ago in New York to discuss a consolidation in the industry. It was stated that no final action was reached, but that the scheme was advanced to a stage which promises success within a short time.

The Bethlehem Iron Company, South Bethlehem, Pa., have finished the armor plates for the barbettes of the new battle ship "Illinois," amounting to 700 tons. A 15-inch plate, representing this group, will shortly be tested at the Indian Head proving grounds.

In a recent report to the State Department, United States Consul J. W. Davidson, at Tamaui, Formosa, sets forth that the Formosan Government has asked for an appropriation of $20,000,000 for the construction of a railway through the island and for the improvement of Kelung harbor. The proposed railway will extend south from Teckcham to Takow, a distance of 175 miles.

It was reported this week that a consolidation of clay sewer pipe companies embracing the leading interests in Ohio, Pennsylvania and New York had been consummated. The deal, it is said, involves the purchase of some 50 plants, many of which own their own clay beds. The amount of capital involved is placed at $10,000,000.

Lake navigation between Detroit, Mich., and Cleveland, Ohio, was formally opened on Monday, when the Detroit & Cleveland Navigation Company's steamer "City of Detroit" steamed out from Detroit harbor on the first trip of the year. Lake Erie is said to be practically clear of ice.

A new company have just been formed in St. Petersburg, Russia, with a capital of 10,000,000 roubles, under the name of the St. Petersburg Shipbuilding, Machinery & Mechanical Factories, who propose to erect large engineering works. A site for the proposed new works is reported to have been selected, and machinery will be purchased on an extensive scale. Purchases of material will, it is said, begin early in June.

The Iron and Metal Trades.

In many branches the Iron and Steel markets have quieted down somewhat. This is due in certain lines to the withdrawal of sellers pending the completion of arrangements for a consolidation of interests. In other branches it is due to the fact that buyers do not share the confidence of makers in the maintenance of present prices and are beginning to test them by withdrawal from the market. Many are now buying from hand to mouth.

In the Foundry Iron markets business has quieted down considerably, although reports from Southern markets report a further advance. Opinions vary greatly as to the capacity becoming available through the blowing in of new plants. There is no doubt that every means is being exhausted by idle furnaces to get into line.

In Bessemer Pig the market has now been re established by the sales of the association at $14.50 Valley furnace. The report that the sales of 130,000 tons to the National Steel Company and others had exhausted the supply from that source is pronounced absurd.

There has been a considerable movement lately in Foreign and Domestic Ferromanganese and the prices of the associated English and American makers have been advanced. Serious scarcity in this material is threatened. Reports indicate that additional furnaces will blow in in England.

The Steel market has been quiet, with only occasional small sales at fancy prices. The National Steel Company are reported to have sold 250,000 tons of Tin Plate Bars to their affiliated interest, the American Tin Plate Company.

The Western Steel Rail makers have made a further advance of $1 per ton and report some business.

As the season approaches increasing quantities of Structural Material for buildings and bridges are reported in the leading markets.

Prices on Hoops and Cotton Ties have been withdrawn pending the consummation of the consolidation among the mills, which is now close to a settlement. The consolidated company, who will probably be called the American Steel Hoop Company, will take in the three Pittsburgh plants, with the three blast furnaces belonging to one of them, one concern in the Shenango Valley, the Youngstown mill, which is to be transferred by the National Steel Company, and the Duncansville works. The relations between the National Steel Company and the American Steel Hoop Company are very close.

The subscription books of the consolidation of the Western and Southern Bar mills were opened to-day. A furnace property in the Birmingham district is included, but none of the Pittsburgh or Eastern mills are in the consolidation.

The Sheet mill negotiations are still hanging fire, but it is believed that ultimately something will be done with this interest.

The Tube consolidation is reported to have reached the point that subscription books will be opened in a few days.

The operations of the National Steel Company are attracting more and more attention in the trade as the comprehensive plans to control production from the Ore and Coal in the ground to the finished product are developing. Report has it that the concern have an option on one of the most famous of the Lake Superior Bessemer Ore mines, and the announcement has been just made of the purchase of a large tract of Coal lands in the Connellsville region. To their outlet in the Tin Plate trade they are now adding the Hoop and Cotton Tie industry, with a goodly share of the Skelp and other lines.

Copper has recovered from the weakening influences and has during the last few days gone back to 17.50c. for Lake, the result of a rise in the London market.

From the West come reports of some irregularity in prices of Tin Plates due to realizing on the part of jobbers.

A Comparison of Prices

At date, one week, one month and one year previous.

Advances Over the Previous Month in Heavy Type. Declines in Italics.

Chicago (*By Telegraph.*)

Office of *The Iron Age*, 805 Fisher Building,
CHICAGO, March 29, 1899.

The volume of business is limited only by the supply of Iron and Steel. A great deal more would be done if it were possible to secure satisfactory deliveries. Instances are continually cropping up of important contracts actually going begging for some one to fill them. Prices continue to advance, and while the first of July is regarded as probably bringing the turn of the market in the estimation of buyers, confident predictions are made on the other hand that prices will be much higher. It is certain that orders for delivery beyond that date are steadily piling up wherever producers are willing to book them.

Pig Iron.—The week would be considered quiet compared with conditions ruling two or three weeks since. Orders are for moderate lots usually, although a good sized quantity of Southern Coke Iron has been sold to the local owners of a Pipe foundry in Ohio. Some big inquiries are in the market, but negotiations are proceeding slowly, the buyers hoping to be able to secure lower prices than those now asked. Their expectations, however, seem hopeless in view of the fact that the upward tendency of prices continues. Southern furnace companies have marked up their quotations 25c. to 50c. during the week, and Ohio Soft and Silvery Irons have gone up $1 50. The representatives of Southern companies report their principals talking very bullishly of the situation and predicting much higher prices because of the scarcity of Iron and the continued heavy demand from other markets. The local supply of Coke Iron will be increased after June 1 by the blowing in of the Calumet and Minerva furnaces. It appears at present that the additional supply thus promised will be easily absorbed. We quote for cash as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	16.00 to 16.50
Ohio Strong Softeners, No. 1	17.00 to 18.00
Southern Silvery	16.00 to 16.25
Southern Coke, No. 1	16.00 to 16.25
Southern Coke, No. 2	15.50 to 15.75
Southern Coke, No. 3	15.00 to 15.25
Southern Coke, No. 1 Soft	15.75 to 16.00
Southern Coke, No. 2 Soft	15.00 to 15.25
Foundry Forge	14.50 to 14.75
Gray Forge and Mottled	14.50 to 14.75
Southern Charcoal Softeners	16.00 to 16.50

Alabama and Georgia Car Wheel	18.00	to	19.00
Malleable Bessemer	.....	to	16.00
Standard Bessemer	.....	to	16.00
Spiegel, 20 per cent.	.....	to	30.00
Jackson County Silvery, according to Silicon	18.00	to	19.00

Bars.—A phenomenal demand is reported for both Bar Iron and Soft Steel Bars. Plenty of consumers appear to have been caught napping by the advancing prices, although many confine their purchases to small lots, hoping that a turn will soon take place, but this makes them buy more frequently. The developments of the week have disappointed them again, as prices are still higher. Mill shipments of Common Iron may be had in a few instances at 1.55c., Chicago, but more frequent quotations are 1.60c. to 1.70c. The Bar Iron consolidation is reported to be about accomplished, and the mills are therefore quite careful not to load up with much additional business. Good sales have been made of Soft Steel Bars, on which quotations are usually 1.60c. to 1.65c., Chicago, but some Pittsburgh mills are reported to have made sales as high as 1.75c. here. The Hoop manufacturers have withdrawn quotations and notified their agents to submit all inquiries direct. An excellent demand is reported by jobbers, who are receiving much larger inquiries than usual because of the difficulty in getting satisfactory deliveries from the mills. They quote small lots from stock at 1.70c. to 1.75c., full extras, for Iron or Soft Steel Bars, and 3.20c. to 3.25c. for Norway and Swedish Iron.

Car Material.—Large orders are still being placed for material for cars. One contract called for 3500 tons of Shapes for this purpose. More car orders are coming out.

Structural Material.—A heavy demand is noted for Shapes for both bridges and buildings. Orders are known to have been placed for about 10,000 tons of material for bridges and over 4000 tons for buildings to be erected in the East. Contracts are being made for good quantities of Building Shapes to be taken out during the season. The scarcity of Plates is causing engineers to avoid the use of them as much as possible in getting out specifications. Inquiries are being received for additional material for track elevation, at least 3000 tons being required for this purpose in the near future. The Cable Building, in this city, taking about 600 tons, has just been let. Prices are exceedingly firm, as previously reported, except small lots of Angles from store, 1.80c. to 1.90c., and Tees from store, 1.95c. to 2c.

Plates.—The demand is still far from being satisfied. Business is large, but it would be much heavier if anything like satisfactory deliveries could be made. Sales are reported at 2.15c. to 2.25c., Chicago, for Tank Steel for shipment from mills after July. Manufacturers are easily securing orders at 1.90c., Chicago, for shipment at their convenience. Quotations are nominal under the circumstances, as good premium is being paid for early shipment. Mill shipments, Chicago delivery, are now quoted as follows: Tank Steel, 2c. to 2.15c.; Flange, 2.10c. to 2.25c.; Marine, 2.40c. to 2.55c.; Common Fire Box, 3c.; Best Fire Box, 3½c. to 4½c.

Merchant Pipe.—Sales agents have booked large orders during the week for future delivery, as buyers have apparently made up their minds to meet the views of manufacturers, even if deliveries cannot be made until far in the future. Discounts continue at 60 and five 10's off full list of Merchant Pipe, but another advance is anticipated this week. Merchant Boiler Tubes are quoted in small lots, 1¼ to 1¾ inch, inclusive, 40 per cent. off for Iron and 45 per cent. off for Steel; 2 to 2¾ inch, inclusive, 52½ per cent. off for Iron and 57½ per cent. off for Steel; 3-inch and larger, 60 per cent. off for Iron and 62½ per cent. off for Steel, with an extra of 5 per cent. for carload lots.

Sheets.—Practically no market exists on Sheets. Manufacturers are almost unanimously withdrawing quotations and refusing to consider new business. It is probable that some mills might take No. 27 Black Sheets at 2.65c. to 2.75c., Chicago, but these prices are so close to those made by jobbers that business is being thrown into their hands to a great extent. It is stated that mills are realizing a greater difference than usual between Black and Galvanized Sheets, so that they are giving preference to business in the latter. They quote mill shipments of Galvanized at 70 and 10 to 75 per cent. off, with the usual freight allowance. Jobbers quote small lots of Galvanized at 70 and 10 per cent. off and No. 27 Black at 2.70c.

Merchant Steel.—The high prices now ruling are not completely checking business, but orders continue to be received for moderate quantities, with occasional inquiries for fair sized lots. Mill shipments, Chicago delivery, are quoted as follows: Smooth Finished Machinery Steel, 2.30c. to 2.40c.; Smooth Finished Tire, 2.10c. to 2.20c.; Open Hearth Spring Steel, 2.30c. to 2.40c., base; Toe Calk, 2.30c. to 2.40c., base; Ordinary Tool Steel, 5.50c. to 7c.; Specials, 10c. upward. Jobbers are quoting small lots from stock at 2.60c. for Tire, 2.80c. for Machinery, 2.80c. for Spring, and 2.80c. for Toe Calk, full extras.

Billets and Rods.—Ordinary Bessemer Billets are quoted at $25.50 to $26, but no sales are reported, as the local mills are using their entire production, and outside mills appear to be completely sold up. Sales of Open Hearth Billets have been made at $31. Wire Rods are in some demand, but for early delivery, and the local producers have their output sold up to July.

Rails and Track Supplies.—Another advance of $1 was made on Saturday in the price of Steel Rails. Standard Sections are now quoted at $25 for largest lots, while small lots command $26 to $27. Sales of about 10,000 tons have been made during the week. More is under negotiation, but difficulty is experienced in arranging deliveries. Light Rails are quoted at $25 to $27, according to section. The demand for them continues, but the local mills are now sold out for three months. Track Supplies are quoted as follows: Splice Bars, 1.35c. to 1.50c.; Spikes, 1.90c. to 1.95c.; Track Bolts, with Hexagon Nuts, 2.60c. to 2.70c.; Square Nuts, 2.40c. to 2.50c.; Steel Links and Pins, 2c.; Iron Links and Pins, 1.80c. to 1.85c.

Old Material.—The market for Old Material reached its highest point last week for the present. The approaching consolidation of the Bar mills has caused the discontinuance of buying for stock, as it is likely that more or less dullness will prevail on Mill Scrap until the new organization is in working order. The supply of Cast Scrap has also become larger, the high prices having caused a larger quantity of such material to be collected. Old Iron Rails have been sold during the week at $17.50, but at present it is believed that not over $17 could be obtained. Dealers' selling quotations are nominally as follows, per gross ton: Old Iron Rails, $17; Old Steel Rails, mixed lengths, $11.25 to $11.75; selected long lengths, $11.50 to $12.50; Relaying Rails, $15 to $16; Old Car Wheels, $15; Heavy Melting Steel Scrap, $11.25 to $11.75; Mixed Steel, $9. The following selling prices are per net ton: No. 1 Railroad Wrought, $15; Dealers' Forge, $11.50; Fish Plates, $15; No. 1 Mill, $9 to $10; Heavy Cast, $12.50; Stove Plates, $7.75; Iron Car Axles, $16.50; Horseshoes, $11.50; Cast Borings, $6 to $6.50; Steel Axle Turnings, $9.50; Iron Axle Turnings, $10; Machine Shop Turnings, $7.50 to $7.75.

Metals.—Copper is steady, carload lots of Lake being held at 18c. and Western 17⅝c. Pig Lead is easier and has been sold down to 4.22½c., with but little business doing.

Tin Plate.—The volume of business in Tin Plate continues large, but some irregularities are noted, owing to the disposition of outside jobbers to force their stocks on the market. They either believe that the time has come to take their profit or find they have overbought and are obliged to sell. Manufacturers have made no change in their prices so far as can be learned.

The office of the Magnolia Metal Company, manufacturers of Magnolia Anti-Friction Metals, has been moved from the Traders' Building to the Fisher Building, 281 Dearborn street.

Philadelphia.

Office of *The Iron Age*, Forrest Building,
PHILADELPHIA, PA., March 28, 1899.

There has not been much change in the Iron and Steel situation since last week. Prices are strong, and on the whole slightly higher, but there is a more settled feeling, as though current quotations were recognized as legitimately warranted by ruling conditions. The scarcity of material for delivery during April and May is also looked upon with less anxiety, because there is a reasonable certainty of larger supplies as midsummer is approached. Nobody figures on any decline in prices, however, so that we are getting toward what may be called a settled market—comparatively so, any way. The volume of business is as large as ever, and would be larger if material could be had, but it is limited by small supplies. There is not a single department that can be excepted from this statement, which ought to be ample evidence of the satisfactory condition of business. Under such circumstances there can be only one opinion in regard to the immediate future, and that is continued activity, and continued firmness in prices. Some have an impression that prices will work higher during April and May, as there is a tremendous pressure for deliveries during that period, and whatever may be the course of the market after midsummer, it is hardly possible that there should be anything but a strong market during the second quarter of the year.

Pig Iron.—The market is steady and firm, but at the moment is not as aggressively bullish as it was during the earlier portion of the month. At about $16 for No. 2 X Foundry and $15.50 for No. 2 Plain, prices are inclined to settle as fair average figures for April or May shipments, but for the last half of the year there is a

feeling that there is at least a possibility of somewhat lower prices, consequently there is less disposition to make contracts on the basis which sellers usually demand. April and May offerings are very light, however, and for shipments any time before midsummer prices are strongly maintained. On the whole it may be said that the market is entirely satisfactory to the selling interests, as they are glad to have a respite from the continued urgency to make new contracts. There is no difficulty in getting full prices for such small lots as can be squeezed out from time to time, and for the time being that is about all that sellers care for. The list of furnaces scheduled as likely to be put in active operation during the second quarter of the year makes a formidable showing, but the increased cost of production will not permit of low prices, consequently there is a general disposition to accept current quotations as something pretty near to what are likely to rule for some time to come. There is undoubtedly more disposition on the part of sellers to consider proposals for deliveries during the last half of the year, but unless bids are pretty close to current quotations sellers have not as yet shown much disposition to accept business. Some are of opinion that it is not a bad time to average up on the year's sales, the first six months having been at comparatively low figures, so that to make anything like a good showing for the year a much higher average of prices for deliveries during the last half is indispensable. For the present sales are being made at about the following figures for seaboard or points equivalent thereto: No. 1 X Foundry, $16.50 to $17; No. 2 X Foundry, $15.75 to $16.25; Plain, $15.25 to $15.50; Standard Mill Iron, $15.25 to $15.50; Basic, $15 to $15.25; Low Phosphorus, $18.50 to $19.50.

Billets.—No business has been done of any account, as Steel is practically unobtainable. Prices are nominally $27 to $27.50 but it would be difficult to find any one with Steel for sale.

Plates.—The situation is the same as for some weeks past. The demand is far greater than the supply, consequently prices are always firm, as manufacturers can pick their trade and almost name their own prices for April and May shipments. There is a heavy demand for ship and bridge work, far more than the Plate mills are likely to accept under present conditions, as they are already crowded as they have never been before. The question of price, so far as manufacturers of Plates are concerned, has very little influence; they simply cannot take the work, and that ends it for the time being. Quotations for seaboard or equivalent points are about as follows: 2.10c. to 2.20c. for ¼-inch and thicker; Shell, 2.20c. to 2.30c.; Flange, 2.40c.; Fire Box, 2.50c.

Structural Material.—The situation is much the same as at the Plate mills. The demand is immense, and for deliveries within the next 60 days more or less of a premium has to be paid, and even then it is a favor to get some one to take the order. Nominally prices are about as follows: Angles, 1.53c.; Beams, 15-inch, 1.53c.; Tees, 1.58c.; Zee Bars, 1.57c.; Bulb and Deck Beams, 1.73c.

Bars.—There is no special change in this department. The new list of extras appears to have been adopted with satisfactory results, and at quoted prices there is an excellent demand. Mills are very much crowded with work, however, and a great many orders have been turned down, or postponed for further consideration. Seaboard quotations for carload lots and upward are firm as follows: Ordinary Bars, 1.40c. to 1.45c.; Refined Bars, 1.50c. to 1.55c.; Test Bars, 1.65c.; Steel Bars, 1.60c. to 1.65c.

Sheets.—The demand is very urgent, and although the mills are run to their full capacity, it is impossible to satisfy many of the requirements. Prices are firm at about the following figures for best makes (Common Sheets two-tenths less): No. 10, 2.60c.; No. 14, 2.70c.; No. 16, 2.80c.; Nos. 18-20, 2.90c.; Nos. 21-24, 3c.; Nos. 26, 27, 3.10c.; No. 28, 3.20c.

Old Material.—Prices have been very wild and very excited during the past week, under which some extraordinary prices have been realized. The market is far from being settled yet, but as some urgent requirements have been met, consumers have reduced their bids, although it does not necessarily follow that holders will recede from their position. The next few days will probably test the situation. Reported high sales were: Iron Rails, $18.50; Steel, $16.50; No. 1 Choice Wrought Scrap, $18; Machinery Scrap, $14. Bids and offers for deliveries in consumers' yards are now about as follows: Cast Borings, $9.75 to $10.25; Wrought Turnings, $10.75 to $11.25; Machinery Cast, $13.50 to $14; Old Car Wheels, $15 to $15.50; Heavy Steel Scrap, $14.50 to $15.50; Steel Rails, $15 to $16; Iron Rails, $17.50 to $18; No. 1 Railway Scrap, $17 to $17.50; Iron Axles, $20 to $21; Steel Axles, $16.50 to $17.50.

(By Telegraph.)

The market has a very firm tone for April and May deliveries, and prices for every class of material are exceedingly firm for the last half of the year. Pig Iron is a shade easier, buyers showing a disposition to hold off until their requirements become more urgent. Steel is scarce and has sold at about $28 for small lots, which would still be an inside figure for early shipments. There is great urgency for Plates, and in some cases business is done at higher than quoted rates, but a great deal of business is turned down because of the impossibility of making deliveries as required. The same applies to Bars, Shapes and Sheets, although in somewhat lesser degree.

Pittsburgh.

Office of *The Iron Age*, Hamilton Building, }
PITTSBURGH, March 29, 1899. }

(By Telegraph.)

Pig Iron.—As intimated in this report last week, the furnaces have practically fixed the price of Bessemer Pig for last six months at $14.50 by selling about 130,000 tons at that price, and for that delivery. Of this quantity 90,000 tons were taken by the National Steel Company, 20,000 by Carnegie, and the balance by other consumers. No sales have since been made. The market is strong at $14.50, Valley, but there is little inquiry. Gray Forge has been fairly active since our last report, and is strong at $14.50 Pittsburgh. Foundry Irons are very active and prices firm. We quote Bessemer, $14.50; Gray Forge, $13.85, both at Valley furnace; No. 2 Foundry, $15.25 to $15.50; Gray Forge, $14.50; Bessemer, $15.50, all f.o.b. Pittsburgh. We note a sale of 500 tons of Gray Forge at $14.40, Pittsburgh.

Billets.—There is very little inquiry for Steel, and, on the contrary, the mills have none to spare. Consumers are covered up to July 1 or longer, and apparently are not willing to take hold at present prices for the last half of the year. It is understood the National Steel Company are now willing to quote on Billets and Sheet Bars for last half. We note a sale of 300 tons of Slabs for April, May and June at $25.50, Pittsburgh. The market is $25 to $25.50, maker's mill, for small lots for prompt shipment.

Sheet Bars.—We do not hear of any sales, but it is probable there will be something done soon for last half of the year, as it is stated the National Steel Company are now in position to quote on Bars for last six months, having recently purchased a very large lot of Bessemer Pig.

Spelter.—Prices are about the same as last week. We quote at 6.25c. to 6.30c. for best grades, f.o.b. Pittsburgh.

Steel Rails.—Prices on Rails have again advanced and the local mill now quotes $25, f.o.b., for Light or Heavy Sections.

(By Mail.)

A few hours after our report went to press last week the Bessemer Furnace Association sold about 130,000 tons of Bessemer Pig for delivery in third quarter and in last half of the year at $14.50, Valley furnace. The National Steel Company took 90,000 tons, the Carnegie Company 20,000 tons and the balance went to other consumers. It is claimed that the furnaces have not definitely fixed a price on Bessemer Pig for last half, but decided to sell the above Iron at the price named. The sales are important, both from the magnitude and also from the fact that they determine largely the price of Pig Iron for last half of the year. With Bessemer Pig at $15 or more, Pittsburgh, it is not likely Billets will be much under $25. The statement that these sales had cornered the Pig Iron market is absurd. Aside from the above there has been nothing of an important nature during the week. Prices on all kinds of manufactured goods are exceedingly firm, but have remained practically stationary since our last report. The chief difficulty is to get goods, and there is much complaint from jobbers and small dealers on this account. The mills are as full of work as they can be, and are anywhere from two to three months behind in deliveries on nearly everything. It is a fact, however, that there has not been much done for last half of the year, and buyers are going slow in placing orders. There is a disposition to hold back and take chances on the market. It is admitted that prices on everything are extremely high and it takes a good deal of courage to cover the second half on present values. At the same time it is true that there is no disposition thus far on the part of manufacturers to make concessions in order to enter tonnage for

second half. The market all around is in an extremely satisfactory condition, and the mills and manufacturing plants generally are certainly reaping a harvest.

Ferromanganese.—Ferro is exceedingly scarce and the local producer quotes $70 at mill. Still higher prices are probable. It is claimed that foreign Ferro cannot be laid down in this city at less than the above price.

Plates.—Nothing of an important nature developed during the week. The mills are as full of Plate orders as they have been at any time in the last three or four months, and prices are very strong. Small lots of Tank for shipment within 30 days have been sold on the basis of 2c., Pittsburgh. Options on Plates for delivery in the next 90 days have been given on the basis of 1.85c., Pittsburgh. We can state that a leading local mill declines absolutely to quote, being filled up to August or later. We quote: Tank, 1.85c. to 2c., depending on delivery; Flange, 2.10c.; Marine, 2.20c. to 2.25c.; Ordinary Fire Box, 2½c.; Locomotive Fire Box, 3.25c. to 3.50c.

Structural Material.—There is a heavy tonnage being placed in Structural Material and a great deal of work is in sight. We quote: Beams and Channels, 15 inch and under, 1.40c.; 18 to 24 inch, 1.50c.; Tees, 1.45c.; Zees, 1.40c.; Angles, 1.40c.; Grooved Rolled Plates, 1.65c. to 1.75c., all f.o.b. Pittsburgh.

Bars.—There is an enormous demand and prices on both Iron and Steel Bars have further advanced, the minimum on either being 1.50c. at mill, with some sellers quoting considerably higher. It is understood that the scheme to consolidate the leading Bar mills in the West and South is practically assured of success. A slight hitch has come up, which is not serious, however. The Valley mills are full of work and running to utmost capacity, and they are considerably behind in deliveries. The same is true of Pittsburgh mills rolling both Iron and Steel Bars. We quote Iron and Steel Bars at 1.50c. to 1.60c., base, half extras.

Sheets.—The same active condition of the Sheet market noted in this report for some time continues and prices are strong. No. 28 Sheets have sold in the past week at 2.60c., cash, at mill and tonnage has been turned down at that price. There is a heavy demand from all sections of the country, but most of the mills have very few Sheets to spare this side of July. For delivery beyond that date nothing is being done, owing to the uncertainty of Bars. We quote No. 27 Black Sheets at 2.45c. to 2.50c.; No. 28, 2.50c. to 2.60c. For early delivery Sheets have sold at our higher quotations, and for spot cash at mill. The demand for Galvanized Sheets continues very heavy and another advance in prices is probable. We quote in large lots 75 per cent. off, with 15c. freight allowance. For small lots considerably higher prices are asked.

Machinery Steel.—There is a moderate amount of new business, but the mills are overloaded with tonnage placed some time ago at lower prices. We quote: Machinery Open Hearth Steel, Soft, 2c; Hard, 2.25c.; Crucible, 4c.; Spring Steel, Common, 2.25c.; Crucible Analysis, 2.75c.; Genuine Crucible, 3.50c.; Toe Calk Steel, 2.25c.; Pick Steel, Open Hearth, 3¼c.; Crucible, 4.50c.; Cant Hook, Open Hearth, 3¼c.; Crucible, 4c.; Wedge Steel, Open Hearth, 3¼c.; Crucible, 4c.; Tire Steel, ¾ x 3-16 inch and heavier, 2.10c.; Plow Slabs, 3-16 inch and heavier, 4 inches wide and over, Bessemer Open Hearth, 2.50c.; Hard Open Hearth, 3c.; Crucible Analysis, 3.25c.; Genuine Crucible, 4c.; Lay Steel, Rolled, 3¼c.; Hammered, 4c. The above prices are f.o.b. Pittsburgh.

Pipes and Tubes.—Market conditions are unchanged since our report of last week. There is a good demand for Pipe from all sections of the country and early deliveries are impossible to get owing to crowded condition of the mills. Prices are strong and are being firmly held, except by a few jobbers, who in some instances are naming slightly lower prices than established by the mills. We quote Black and Galvanized Merchant Pipe at 60 per cent. off, with five 10's additional for less than carload lots f.o.b. maker's mill, and an extra 5 per cent. in carload lots, delivered in free districts. Demand for Casing is heavy and the market is strong. We quote Screw and Socket Joint at 52½ and 10 per cent.; Inserted Joint, 52½, with an extra 5 per cent. to dealers. There is an enormous demand for Boiler Tubes, and the recent advance by the mills is, we are advised, being firmly held. We quote 1¼ and 1½ inch, Iron or Steel, at 45 per cent. off list; 1¾ to 2½ inch, inclusive, Iron, 55 per cent.; Steel, 60 per cent.; 2¾ inch and larger, Iron, 60 per cent.; Steel, 62½ per cent., with an optional 5 per cent. to dealers.

Iron and Steel Skelp.—The market is exceedingly firm and several mills are practically out of it as sellers, being sold up for the next two or three months. Prices are very strong and we quote: Grooved Steel Skelp, 1.30c. to 1.35c.; Sheared Steel Skelp, 1.60c. to 1.75c., depending on delivery; Grooved Iron Skelp, 1.50c. to 1.60c.; Sheared Iron Skelp, 1.70c. to 1.75c., all f.o.b. Pittsburgh, four months, or 2½ per cent. off for cash 30 days. We note a sale of 300 tons of Sheared Steel Skelp at 1.70c., and 1000 tons of Sheared Iron Skelp at 1.75c.

Connellsville Coke.—Last week there were 16,129 ovens in the Connellsville region active and 2514 idle, the production being 169,536 tons. Prices on Coke are exceedingly firm, and as stated in this report recently strictly Connellsville Coke for the last half of the year has sold at $1.75 at oven. We quote Foundry Coke at $1.90 to $2.30, depending on brand and also upon point of delivery.

The offices of the Washburn & Moen Mfg. Company in the Telephone Building, Seventh avenue, Pittsburgh, will be removed on April 1 to the offices of the American Steel & Wire Company, ninth floor, Tradesmen's Building, Pittsburgh. It is probable that a warehouse will be opened in Pittsburgh to carry in stock products of the Washburn & Moen Mfg. Company.

Cleveland.

CLEVELAND, OHIO, March 28, 1899.

Iron Ore.—The feature of interest in Iron Ore circles during the past week has been the evidence that the great Iron and Steel producing combinations have entered the field of lake transportation with the very evident idea of gathering together fleets of sufficient size to care for the movement of any quantity of Ore which may be required at their plants. The Federal Steel Company, the Carnegie Steel Company and the American Steel & Wire Company are the competitors in the effort to secure control of the best lake vessel property, and predictions are freely made that the result of the tendencies now manifest will assuredly be to induce a concentration of lake interests to such an extent that they will within a short time be practically in the control of the companies named and the Bessemer Steamship Company (Rockefeller interest). The fact that overtures were at one time made for the transfer of the property of the latter concern leaves it in the form of a possibility that the Rockefeller interest may eventually be merged into that of the Carnegie Company. The conditions which have been developing during several months past might very naturally have induced a desire on the part of some of the interests above mentioned for the construction of new vessels, but this has been impossible, for the reason that all the lake shipyards are so crowded with work that it is impossible to book orders for delivery earlier than 1900. That they have determined to take advantage of the next best plan and secure when possible vessels which can be purchased from owners is evidenced by the announcement that the two large steel steamers "Pennsylvania" and "Texas," building at the works of the Cleveland Ship Building Company at Lorain for A. B. Wolvin and others, have been sold outright at a price understood to be in the neighborhood of $550,000 to Pickands, Mather & Co. of Cleveland, who are understood to be purchasing for the Federal Steel Company. Negotiations have also practically been concluded for the sale to the Federal Company of the five other steel steamers of the Wolvin fleet, or the Zenith Transit Company as it is known. These latter vessels are the "Zenith City," "Queen City," "Superior City," "Crescent City" and "Empire City," and they are among the largest carriers on the lakes. The Federal Steel Company already have under their control a considerable fleet, and the addition of these boats will add materially to their resources. The American Steel & Wire Company, on the other hand, acquired quite a lake fleet by their absorption of the Cleveland Rolling Mill Company and it is understood that efforts are to be made to enlarge this by the purchase of additional vessels. Among persons conversant with the Iron Ore situation, particularly with reference to the transportation feature, there is prevalent a general impression that the ultimate result will be to force the Carnegie Steel Company to undertake on their own account the transportation of their Ore, or rather a part of it, for a considerable portion of the Carnegie Ore must of course by the stipulations of the existing contract be transported in the vessels of the Rockefeller fleet. The effect of the talk has been to strengthen the freight situation on Iron Ore and to add materially to the chagrin of vesselmen who early in the season tied up with 60c. contracts. No charters of vessels are reported, although there is no doubt that 70c. or even more could be secured. Sales of Ore continue at a heavy advance over association prices. Transfers of vessel property other than those mentioned above include the negotiations whereby W. G. Mather and other interests in the Cleveland-Cliffs Iron Company secure control of the steamer "Centurion," one of the largest lake freighters. W. A. Rogers of Rogers, Brown & Co., whose effort to secure a fleet of perhaps a dozen light draft wooden vessels for the Tonawanda Ore trade was mentioned last week, has been successful in purchasing the steamers "Gratwick," "Quito," "Veronica," "Spencer" and "Swain," and the barges "Amboy," "No. 101" and

"Pennington." His action will not, of course, have any appreciable effect upon lake freights.

Pig Iron.—The heavy sales of Bessemer Ore at prices which it is anticipated will prevail to a considerable extent for the third and fourth quarter delivery will unquestionably have a tendency to steady the market to a certain extent. Sales of No. 1 have been made at $15, Valley furnace, and of No. 2 at $14.50, Valley furnace, for immediate delivery.

Finished Material.—The past week has brought few developments in the Finished Material market. No change has been made in the quotation on Bar Iron for sales out of stock and the demand keeps up excellently. The fact that many of the firms have withdrawn all quotations on Black Sheets is regarded in some quarters as an indication of the probability of consolidation. There has been no general advance in Pipe prices, although some firms have secured as much as 60 and five 10's in car lots. The Otis Steel Company have announced a general advance of $2 on all grades of No. 12 and heavier, and quotations given are only for immediate acceptance. The demand for car Iron is immense and indeed that seems to be the most active factor in the market. In many instances special prices are being secured. No special sales of Structural Material have been reported. There has been a good inquiry for Beams and Channels and some tonnage has been sold, but at the prevailing prices. Angles, however, show some improvement, and for anything under 3 inches a quotation of 1.58½c. in car lots, Cleveland, is being made. No quotations whatever are being made on Plates, unless in very small lots, and anything like early delivery is practically impossible. The present indications are that the headquarters of the new shipbuilding combine will be established at Cleveland, which will result, of course, in all Plate being purchased here.

Old Material.—The demand continues exceedingly active, with no perceptible improvement in the available supply. Quotations are: Steel Melting, $13.50; No. 1 Wrought, $17.50; No. 1 Cast, $12.50; Iron Rails, $19.50; Car Wheels, $16.75; Cast Borings, $8; Turnings, $9.50. The demand in the East seems to be excellent and local dealers say that they have offers of better prices there than can be secured in the home market.

(By Telegraph.)

CLEVELAND, OHIO, March 28, 1899.—The American Steel & Wire Company have won out in the bidding against the Federal Steel Company and the Carnegie Steel Company for the five vessels of the Wolvin or Zenith Transit Company fleet, which were thrown on the market as the result of A. B. Wolvin's acceptance of the position of manager of J. J. Hill's new Pacific Steamship Line. The two steel steamers "Texas" and "Pennsylvania" now building were sold last Saturday to the Federal Steel Company. This seemed to have the effect of enlivening bidding on the other five boats, "Zenith City," "Queen City," "Superior City," "Crescent City" and "Empire City." All of the fleet have been constructed within the past few years and are among the largest type of modern lake craft. The purchasers paid the best of prices for the vessels.

Birmingham.

BIRMINGHAM, ALA., March 27, 1899.

The market for Iron the first half of the past week was a very quiet one, inquiries having decreased and transactions being few; but the latter half of the week was enlivened by increased inquiry and an improvement in transactions. They were scattered, so far as deliveries were concerned, all through the year. Lately those who were confining deliveries to first half of the year have taken in the third quarter. This increases the volume of business. Sales for the week were only moderate, and although some inquiries were for round lots, no information could be obtained of any sales of round lots on single orders. The action of the market would indicate that the holes are not yet all filled, and at quiet times the demand will again be renewed. The week ended with an increasing activity and prices on a parity with those of the week preceding.

It is still a difficult matter to quote absolutely correct prices. Gray Forge is yet $10.75, Foundry Forge $10.75 to $11, No. 3 Foundry $11.25, and No. 2 Foundry $11.75. For small lots buyers should expect to pay 25c. advance. There was nothing of interest gleaned concerning the export trade. Freight room is scarce at this time, and the domestic trade has snapped up so quickly all offerings that it has set the pace both for quantity and in price. The export trade has not actively followed the example. There has been some trading in warrants in small lots on a basis of $10 for Gray Forge, but the trades were of no importance.

Rumors are current concerning certain furnaces that have been idle for long years. To repair them to make them effective is practically equivalent to rebuilding them throughout, and even if this were done they would be at a disadvantage in important respects to those now in operation. But the matter is undoubtedly under consideration, with ample "sinews of war" for a backing. But the holders of the purse strings won't untie them save on a good showing for profit. Several furnaces long out of use have lately been examined with a view to being operated, but it is hardly a matter of probability that further advance will be made. Where in the district they could get Ore, Coke and flux would be a "poser."

Rumors are rife concerning the absorption of some of our large furnaces by the Federal and the American Steel Companies, the latest being that one of them is negotiating for the properties of the Pioneer Company. It is probably the Bar Iron consolidation, who desire to secure a supply of Iron for their local plants. There is considerable effort being made to increase the force of miners in the district, and labor agents are actively at work for several interests. If they could be obtained, as many as are now at work could find employment. The mining of both Ore and Coal in the district must necessarily be largely increased to supply the pending increased demand. As it is, any accident or disappointment would cause serious inconvenience. Shipments of Iron continue free, and practically no Iron is going into either furnace or warrant yards. The rolling mills continue "chock full" of business, and report, "We are going as hard as we can." In some lines there is some delay in filling orders. Such a continuous run of orders as they have had is phenomenal.

Our minor industries have taken a fresh hold on business. The withdrawal of estimates in some cases, the hesitation in others, has been succeeded by the conclusion of "the second, sober thought" that there was no profit in waiting. Business has therefore again commenced to pile up with them. The Warrior Machine Works report sale of a 2,000,000-gallon Worthington pump, to go to Bristol, Tenn., and two others of 1,000,000 gallons each, with engines to drive them; also one of 500,000 gallons for local account.

The Means-Fulton Company have obtained the contract for erecting a cast shed for the Sloss Company, the dimensions being 168 x 52 feet. They have also a contract for two boiler houses, 95 x 45 and 66 x 45 feet, for the same company, and for one of the mines two large air receivers. Some few have all the orders at present that they desire, while there are efforts being made to divert some Cuban business to this point. The local enterprises projected will furnish a large amount of work to these industries, and their prospects for a busy summer are very bright. In all lines of building there is activity, and improvements of a substantial character greet the eye on every hand.

Properties that a few months ago would not be considered are now being investigated, and in some cases negotiations for transfer are nearing completion.

(By Telegraph.)

The Iron market is 25c. better, with sales of Basic Iron at $11 and No. 2 Foundry at $12. The market is only moderately active.

St. Louis. *(By Telegraph.)*

Office of *The Iron Age*, 512 Commercial Building, ST. LOUIS, March 29, 1899.

Pig Iron.—A somewhat quieter feeling is shown this week. Buyers have had some wants filled, but have not been overly aggressive in their demands. Undoubtedly consumers think that the present prices cannot hold out, but a study of actual conditions at furnaces would bring a change of opinion. There has been no change in the nominal quotations of last week, but it is said that present prices will hardly be quotable two months from now. As a general thing consumers fear that their usual purchases made to the middle of the year will prove under actual requirements. Makers of agricultural implements are drawing heavily on their stock yards in anticipation of favorable crop conditions. Machine builders are reported several months behind deliveries, and every concern using Pig Iron experience an active demand. Nominal prices, f.o.b cars St. Louis, are as follows:

Southern, No. 1 Foundry	$15.00 to $16.00
Southern, No. 2 Foundry	15 00 to 15.50
Southern, No. 3 Foundry	14.50 to 15.00
No. 1 Soft	15.50 to 16.00
No. 2 Soft	15 00 to 15.50
Gray Forge	14 00 to 14.50
Mottled	13.75 to 14.25

Bar Iron.—A good volume of trade is seen, and inquiries are freely made. The buyers' efforts to get in under the market result in the refusal of considerable business which must crop out again in the near future, when prices will be even higher. The contract for several thousand freight cars has been successfully closed, and it develops that the St. Louis lines are getting their

rolling stock in better shape than ever. Nothing definite has come to the surface about the proposed Bar mill consolidation, but the market holds stiffly to 1.50c. to 1.60c., base, half extras, in car lots from mills. Jobbers quote small lots 1.70c. to 1.75c., base, full extras.

Track and Rail Supplies.—There is a marked movement of general railway materials and activity in contractors' tools and supplies. An unusually heavy snowfall has temporarily checked outdoor work, but no embarrassment has occurred to train service. Rails of both light and heavy sections are known to be in good demand. The recent advance, while not an assurance of quicker delivery, will stimulate buying in the face of the increasing prices of raw material. Track Supplies are quoted as follows: Splice Bars, 1.50c. to 1.60c.; Track Bolts, with Square Nuts, 2.30c. to 2.40c.; with Hexagon Nuts, 2.40c. to 2.50c.; Spikes, 1.80c. to 1.90c.; Iron and Steel Links and Pins, 1.80c. to 1.90c.

Sheets.—More than one mill is said to be out of the market, and it is a task to run down quotations. In every instance mills pass upon specifications, and agents have no free hand as to delivery or price. No. 27 Black are said to be 2.50c. in carload lots, East St. Louis. If scarcer than scarce is possible Galvanized Sheets may be so considered. The demand is excellent, and mill quotations are tightened to 75 per cent. off, with the shrinkage in the former freight allowance. Jobbers quote 70 and 10 per cent. off from store, with a smaller discount imminent.

Pig Lead.—Advance sales at the higher prices of last week are reported by fortunate refiners. Actual transactions have not been uncovered to-day, but the market is considered strong at 4.20c. to 4.22½c.

Spelter.—Some heavy foreign sales have been recorded, and the opinion advanced that a strong demand and price exists abroad. Spelter has been sold at 6.10c. and higher within the past few days, and the market is looked upon as justifiably firm. The Ore association has successfully maintained the 60 per cent. Ore at a base of $42 per ton, with Spelter at 6c., and sales of that grade of jack were made even at $43.

Cincinnati. *(By Telegraph.)*

Office of *The Iron Age*, Fifth and Main streets,
CINCINNATI, March 29, 1899.

A much quieter condition prevails in the Pig Iron market. Some agents even regard the situation as decidedly dull in comparison with two weeks ago. There has been, however, quite a fair volume of small business and every offering for early delivery is snapped up as soon as presented on the market. The larger buyers appear to have settled down with the intention of taking the market as they find it when their needs are more urgent than they now are. From a seller's standpoint the situation is still exceedingly strong, and there is no bear element predicting lower prices anywhere in the near future. If the next Pig Iron statement as published in *The Iron Age* shows a material decrease in stocks there will be another advance in prices, but until the date of that publication there will hardly be any further upward movement. There are no soft spots in the price-list. No. 1 Foundry and Soft are especially strong and scarce. Ideas regarding prices vary, some agents claiming sales at 25c. ahead of to-day's quotations, while others quote transactions at 25c. less. Thus sales of No. 2 Foundry are reported at prices ranging from $11.25 to $12, Birmingham. Furnaces, especially those South, are still behind in their deliveries and complaint on that line shows no abatement. We quote, f.o.b. Cincinnati, as follows:

Southern Coke, No. 1	....	to	$15.00
Southern Coke, No. 2	....	to	14.50
Southern Coke, No. 3	....	to	14.00
Southern Coke, No. 1 Soft	....	to	15.00
Southern Coke, No. 2 Soft	....	to	14.50
Southern Coke, Gray Forge	....	to	13.25
Southern Coke, Mottled	....	to	13.25
Ohio Silvery, No. 1	....	to	16.00
Ohio Silvery, No. 2	....	to	15.50
Lake Superior Coke, No. 1	....	to	15.50
Lake Superior Coke, No. 2	....	to	15.00

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	$15.25	to	$15.75
Lake Superior Car Wheel and Malleable	15.75	to	16.25

Plates and Bars.—It is very hard to arrive at anything like a fair estimate of values. There has been an advance since last week, but the market is so irregular as to render quotations of small value. Each order is treated by itself and mills here can select or reject to their hearts' content. Plates have been sold as high as 2¼c., and Bar Angles at 1.75c. All architectural material is hard to get.

Old Material.—Offerings are not heavy and the general market is quite strong. Axles and Iron Rails are especially strong. Prices are irregular, though fairly represented in the following quotations, f.o.b. Cincinnati: No. 1 Wrought Railroad Scrap, $14 to $14.50 per net ton; Cast Scrap, $10.50, gross; Car Wheels, $14, gross; Iron Axles, $19, net; Iron Rails, $16; Steel Rails, $11.

New York.

Office of *The Iron Age*, 232-238 William street,
NEW YORK, March 29, 1899.

Pig Iron.—The market has quieted down considerably and there is on the part of buyers a disposition to withdraw in order to test its strength. While a good deal of Iron is being sold for delivery during the second half at present prices, it is a fact that Iron has been at offered at quite a material reduction to good buyers for later delivery. The sales of warrants at the Consolidated Exchange include: On the 23d, 100 tons No. 4, $9⅞; on the 24th, 100 tons No. 2 at $11; on the 25th, 100 tons No. 2 at $11⅛; on the 27th, 300 tons No. 2 at $10⅞, and 300 tons No. 2 at $10¼; and on the 28th, 300 tons No. 2 at $10¼ and 300 tons No. 4 at $9½. We quote as follows: Lehigh and Schuylkill Irons, No. 1 Foundry, $16.25 to $16.75; No. 2 X, $15.50 to $15.75; No. 2 Soft, $15.25 to $15.50; No. 2 Plain, $15 to $15.25; and Gray Forge, $15.25 to $15.50. Southern brands are quoted: No. 1 Foundry, $15.75 to $16.25; No. 2 Foundry, $15.25 to $15.75; No. 1 Soft, $15.25 to $15.50; No. 2, $15 to $15.25; and Gray Forge, $14.50 to $15.

Cast Iron Pipe.—On the Brooklyn order for about 3000 tons a contractor was the lowest bidder, but it is not yet known whether the work has been definitely awarded. While there is a good run of moderate sized orders the only larger block in sight is one of about 2000 tons for delivery at Newark, N. J.

Steel Rails.—Current business is light, no sales of any consequence being reported by Eastern mills. We continue to quote $26 to $28 for Standard Sections at Eastern mill.

Track Fastenings.—We quote: Angle Bars, 1.35c. to 1.40c.; Spikes, 1.70c. to 1.80c.; and Bolts and Nuts, 2.10c. to 2.20c.

Finished Material.—Quite a number of good sized contracts have been placed lately, including the material for the Weston Building at Newark, 400 tons; the Tucker Building, 600 tons; a building on 124th street, 825 tons; a warehouse, 380 tons, and a building calling for 500 tons. The larger structures are 4200 tons for the Stokes Building on Seventy-third street, and the Battery Park Building, 2000 tons, placed with a Chicago firm. The market continues exceedingly firm on Plates and on Structural Material. On Hoops and Cotton Ties the quotations have been withdrawn pending the consummation of the consolidation. We quote as follows: Beams, 1.55c. to 1.65c.; Angles, 1.45c. to 1.50c.; Universal Mill Plates, 2c. to 2.15c.; Tees, 1.55c. to 1.60c.; Channels, 1.55c. to 1.60c.; Steel Plates are 2c. to 2.10c. for Tank, 2.05c. to 2.15c. for Shell, 2.30c. to 2.35c. for Flange, 2.40c. to 2.45c. for Fire Box and 2.45c. to 2.50c. for Locomotive Fire Box, on dock. Refined Bars are 1.40c. to 1.50c. and Common Bars are 1.25c. to 1.35c., on dock. Soft Steel Bars, 1.50c. to 1.55c.; Steel Axles, 2.50c. to 2.75c.; Scrap Axles, 1.75c. to 1.90c.; Links and Pins, 1.65c. to 1.70c.; Hoops, nominal: Best Iron Boiler Rivets, 2.25c. to 2.50c. delivered; Steel Structural Rivets, 1.85c. to 1.90c.; Cotton Ties, nominal.

A. R. Whitney & Co., agents of the Carnegie Steel Company, have taken new offices in the Empire Building.

The American Steel & Wire Company have removed their offices to the Empire Building, occupying the whole of the twentieth floor.

The U. S. Cast Iron Pipe & Foundry Company have established their New York offices at 80 Broadway.

Metal Market.

Office of *The Iron Age*, 232-238 William street,
NEW YORK, March 29, 1899.

Pig Tin—Gained strength during the week, and prices advanced from 23.65c. to 24c. Closing quotations to-day range from 24c. to 24.15c. for spot and nearby delivery. Demand from consumers improved considerably, and a little business went through. The London market while but steady on Thursday, Friday and Saturday advanced on Monday, and closed to-day £109 11s. 3d. for spot and £110 2s. 6d. for futures. This is an advance of almost £2 above last week.

Copper.—During Thursday, Friday and Saturday this metal was still weak, and there were several sales made at 17c. With Monday's quotations a firmer feeling prevailed, and prices advanced rapidly to 17.50c. The price asked to-day is 17.50c. to 17.75c. for Lake Superior Ingot. Electrolytic Wire Bars, Cakes and Ingots

QUOTATIONS OF IRON STOCKS DURING THE WEEK ENDING MARCH 29, 1899.

* Par $50. ** Par $100. *** $1.50 per share paid in. Late Philadelphia and Chicago sales by telegraph.

was held at 17c. to 17.25c., and Casting Stock brought 16¾c. to 17c. London took a sudden jump on Monday, and went up £3, closing to-day at £69 8s. 9d. for spot, and £69 12s. 6d. for three months' futures. Best Selected advanced to £74, which is an increase of £2 above last week. This sudden London advance is regarded as a mystery in the trade, and in most quarters is credited to Copper stock speculation. Exports from this side have been large, and amount to 9525 tons so far this month, but as we have previously indicated these shipments are made on the strength of old contracts.

Pig Lead—The market here is dull and easy with very little doing. Spot receded from 4.45c. to 4.37½c., which is the prevailing quotation here to-day. Sales for shipment to the West are, however, reported as low as 4.35c. In the West the market is firmer, and St. Louis quotes 4.20c. to 4.22½c. It is stated that about 1000 tons were sold in the West last week at 4.17½c. London advanced a shade, and came to-day £14 8s. 9d. At the close it declined, and was quoted £14 6s. 3d.

Spelter—Is quiet and unchanged at 6.30c. to 6.40c for spot. Sales are reported for shipment from the West at 6.30c. It is stated that galvanizers are not in the market and are covered for some time to come. London has advanced to £27 15s., which is 5 shillings above the quotation of last week. The position of the Ore market is unaltered and the miners are apparently holding out strongly at $43.50. They seem to be standing together well, and it is generally predicted that there will be no weakening for some weeks. Although numerous new claims are being put in shape for operation now, it is not probable that they will be in condition for mining until June at the very earliest. There are also several new smelters nearing completion, and these will be in operation as soon as any of the new Ores can be gotten out of the mines.

Antimony—Is without change and prices remain: Hallett's firm at 10c.; Cookson's, 10c. to 10¼c., condition firm.

Nickel.—There has been no change and the business, which consists almost entirely of small lots, is going through at 38c. to 40c., according to quantity and delivery.

Tin Plates.—Business during the last week has been in better shape than for some weeks back. Several very good orders are reported and it looks as though the new company were in better shape to handle the business than at any time since their formation. Steel is apparently coming their way and they are more disposed to sell. Prices remain unchanged and on standard sizes are on a basis of 4.05c. to 4.10c. for 100-lb. Cokes, delivery latter half of this year. It is altogether probable that the company will be selling spot goods in all standard sizes for May delivery soon.

By Telegraph.—Local press items published in many parts of the country during the past few weeks have given the impression that the American Tin Plate Company were unable to secure sufficient supplies of steel for present and future deliveries, and that a consequent shortage of supplies in tin plate is threatened. It is officially stated to-day that while supplies of steel were short during January and February, temporarily delaying shipments of tin plate, the condition is now changed. The American Tin Plate Company have promise of abundant supplies of steel for the balance of the year, and the capacity to provide for any possible requirements for tin plates or other of their products.

Iron and Industrial Stocks.

The features of the week have been the enormous sales of the Federal Steel issues, at a sharp advance. The sales of common amount to 440,000 shares. In American Wire the common has held its own, but the preferred has fallen to close to par. Nothing definite has been learned relative to the results of Mr. Gates' trip abroad. It is reported, however, that his stay will be longer than at first contemplated. Pennsylvania Steel has had an advance on rumors of a plan for providing working capital. The Tin Plate issues have advanced during the week.

The National Steel issues were placed in the unlisted department of the New York Stock Exchange, and sales began on Tuesday, the dealings being heavy. During the week a heavy advance was scored.

There has been, relatively, considerable activity in the stock of the Bethlehem Iron Company recently. On Monday about 600 shares ($50 par) were sold at 145 to 146. On Tuesday over 1000 shares sold at 148 to 150. The directors are holding a meeting to-day to decide upon the new plan.

The following are the closing quotations on a number of stocks:

International Silver, Common	27½ to 28
International Silver, Preferred	80
Mich.-Peninsular Car, Common	43
Mich.-Peninsular Car, Preferred	94
Mich.-Peninsular Car, First 5s	110

The Cincinnati Axle Company.

A new company, to be known as the Cincinnati Axle Company of Cincinnati, Ohio, were incorporated under the laws of the State of New Jersey last week. The object of the company is to manufacture vehicle axles and the capital is $25,000.

Charles T. Ritchie, president of the British Board of Trade, has officially announced that the Government will not proceed with the bill making it compulsory on all British railroad companies to adopt within five years the American automatic coupling system.

The decision of the stockholders of the Hollingsworth & Whitney Company of Winslow, Maine, to increase the capital stock of the concern from $2,000,000 to $4,000,000 and double the present capacity of their paper plant will give them the largest paper mills in the world. The output of the enlarged plant will be 75 tons of paper a day.

The North River Heat, Light & Power Company, Hoboken, N. J., intend to erect a 1500 horse-power station in Hoboken. One-third of the equipment has been ordered.

The furnace of Carbon Iron & Steel Company at Parryville, Pa., blew in on Monday.

Coke and Charcoal Iron for Malleable Castings.—I.

BY ERASTUS C. WHEELER, DAYTON, OHIO.

From the earliest records of malleable cast iron founding, and until within a few years ago, there was seemingly an unwritten law, or understanding, that charcoal pig iron was the only safe material in this particular branch of the art. This feeling has not by any means been entirely removed, for there are many, principally the smaller, concerns who still hold steadfast to their ideal. If coke iron had been proposed 15 years ago as the foundation for the mixture, and the heavy percentages of scrap now carried had been suggested, it would have been pronounced impracticable to produce a marketable article. There is no branch of the iron industry to-day which carries along, year after year, the stock of accumulated hereditary convictions as the malleable casting. There has occurred within the experience of many foundries a condition arising from the fact that the exhaustion of the supply of a certain brand of iron caused the closing down of works until that stock was replenished. The present day does not always find all concerns free from this embarrassment. The greatest progress in the art has been made by the larger concerns, whose executives have been awake to the knowledge that the charcoal producing capacity was not equal to supply one-quarter of the tonnage. Where years ago the mixture was all charcoal iron, now 25 per cent. is all that can be carried with the factor of continuance in view. The smaller concerns have not been forced to realize this fact as yet, and are still holding coke iron at some distance. It will be the endeavor of this article to deal with some of the comparable qualities in each iron and present some deductions gathered from experience, with particular reference to coke iron, which is at present receiving such favorable appreciation owing to the inability of charcoal producers to meet the demands.

Which is the better iron? It must be confessed that, if there were enough charcoal iron produced, coke metal would not now be considered, even taking into account what was its first credential—namely, cheapness. The differences between charcoal and coke iron are not distinguishable from the appearance of the fracture, although there is, of course, the well recognized shape of the pig to mark them. Those who have made up their mixtures from the fracture of the pig can with their experience detect some peculiarities, but to the average person they appear greatly alike. There is no decided difference in the size of crystals in a coke or charcoal No. 1. The heat conditions have been very nearly the same during their production. Yet in reality there exist some marked qualities affecting their compositions and physical characteristics. The difference in quality of fuel used during the reduction of the ore, and the variance in purity of the ores charged into furnaces, are to a great extent responsible for the resulting variance in the pig metals.

Looking at both from a chemical standpoint, there is no great noticeable difference in their compositions, barring sulphur.

	Silicon.	Sulphur.	Phosphorus.	Manganese.	C. Carbon.	G. Carbon	Total carbon
Charcoal, No. 1	2.20	0.005	0.240	0.42	0.30	3.32	3.62
Coke, No. 1	2.50	0.025	0.182	0.75	0.37	3.30	3.67

The influencing element in these irons is without doubt the carbon. In charcoal furnaces the blast is introduced at lower temperatures and in connection with the fuel promotes a reduction which hastens the formation of carbonic oxide gas in great quantities. The pressure of the blast in charcoal furnaces is considerably less than in coke stacks, and the importance of this might be illustrated by the fact that when an ordinary air furnace is run upon very low wind pressure the iron produced will be far superior than when poured under a higher blast. High pressure, whether in blast furnace or the ordinary air furnace, has a most decided tendency to burn the metal, and burnt iron always makes dirty castings. Cold blast at low pressure accounts for the very successful castings of more than one concern. Coke iron is produced in much shorter time than charcoal, the blast being heated to a very high degree and introduced into furnace at high pressure. The quality of fuel used is also inferior, when compared with the charcoal. There have been under observation some few brands of coke iron which after melting in air furnaces, and while being refined, have been known to slag off enough dirt to warrant apprehension of results. Dirt in iron is not caught by the gates on castings. No matter how thin they may be cut, it will flow along with the metal, and upon cooling is forced to the surface of castings by the occluded gases liberated during the casting operation. There has always been an idea that dirt rose to the surface of ladles and could be skimmed off. But this theory has been disproved; dirt does not "give up" so easily. Again, in the malleable metal will be found a curious phenomenon—*i.e.*, when a large ladle of metal has been thoroughly skimmed and made ready to pour, if the same is then allowed to stand for a while small black bubbles will be observed breaking upon the surface of the metal, and gradually a small covering of slag or dirt will collect. Surely this does not come from the fact that the ladle may be still "green," as some very eminent foundrymen have been quoted; rather it is dirt or slag rising to the surface, being lighter than the iron. This curious condition arises only in the case of a very hot metal; a dull metal is naturally denser in its molten state. Dirt in dull metal shows itself very clearly, but not in the ladles. If pig iron could be thoroughly refined in its initial casting this condition would not occur.

An experiment along these lines resulted in the following novel features: Two pigs were selected from casts, one of which was produced while the furnace was working abnormally hot, and the other under favorable conditions, though not as hot. The complete chemical analysis did not vary enough to record, including percentage of metallic iron present. The two bars were placed in a planer and brought down to exactly the same dimensions. The pig made under the excessive heat conditions weighed 72 pounds 7 ounces, the one under the colder working 73 pounds, a difference of 9 ounces. The grain or fracture showed a slight variance, the higher thermic condition producing a trifle more open grained. Here was a difference of 9 ounces to be accounted for. Could we attribute all of this increased weight to the condensed or higher specific gravity of the metal made under the lower heat conditions? If the metal made under the high thermic state had absorbed some of the thin liquid slag then developed without taking up any noticeable quantities of its chemical impurities, one might call some of this deficiency in weight dirt, which at the ratio mentioned would amount to about 18 pounds per ton, which in a 10-ton heat would make a large barrowful.

In following up the original argument, this dirt or slag made under high temperature will separate only under a correspondingly high remelting heat. In the pig of lower casting heat, and where the density is greater, we might argue that this dirt has not had the opportunity of affiliating with the molecules, but has been slagged off in its entirety. Dirt, therefore, in castings is not always the result of molders' carelessness or improper skimming, but rather at times dirty initial iron.

There is a circumstance in the malleable industry which is of more importance than its corresponding condition in the gray iron art—namely, an article of good appearance must be presented to the commercial consumer, and a dirty casting has no place. What must be said of castings which in the hard iron are pronounced perfect, and after passing through the anneal present large dirt holes upon their surface? Would it be fair to reason that this defect was caused by a bubble of gas below surface of casting? It could be gas or dirt which had forced itself outward until it met with the resistance of only a very thin coating of metal which had chilled from contact with the sand, before the center of casting was permanently set. Coke iron has always been, and will perhaps continue to be, an iron containing more material impurities than the charcoal metal. From its origin this cannot be avoided. Charcoal iron has the initial advantage of being produced in a much slower manner. This last fact cannot be side-tracked when comparison is made with coke.

The very finest and purest pig iron made in the world is produced in Northern Europe from selected woods charred for fuel and where the smelting operation is from 15 to 22 hours longer than in America. The question of comparison, with reference to the impurities of charcoal and coke irons, opens up the field for discussion. In looking over the analyses of each we find the nearest approach to similarity when the furnaces are working hot, and with the decreasing temperatures the analyses broaden, but we find the charcoal gaining as regards the quality of material. The coke iron is fast absorbing sulphur from the fuel, while the charcoal is merely reducing its silicon; and the other impurities (barring carbon) are remaining practically stationary. With the charcoal No. 3 comes the ideal iron for the regular malleable casting of to-day. There is no question raised at the present writing but that just as perfect malleable can be made with an all coke mixture as with charcoal. This has been demonstrated beyond a doubt, but at the same time there is always a question in the manufacturer's mind which causes a great hesitancy in his saying that he can get along without charcoal iron, yet he would make malleable forever without

a pound of coke metal at hand. The railway supply, furnishing the largest tonnage for malleable plants at present, offers for casting a variety of patterns, some of which are so placed upon cars as to be responsible for the safety of humanity in general. There should nothing enter into the composition of couplers and their kindred castings but materials which are known to be distinctly first class. We find in coke iron a metalloid which destroys to a certainty the best iron—viz., sulphur. There can never be that feeling of safety to a conscientious concern when using coke iron (unless they use it half and half with charcoal) as when using an all charcoal burden. An all charcoal mixture will invariably produce a material after anneal black and velvety, with just the suspicion of a white edge or skin, which latter a great many users believe is the only part of the casting malleableized. The question is often asked, How deep do you anneal? The charcoal mixture should always be worked slowly in the furnace to attain the highest results, and as there is no great amount of either manganese or sulphur present to facilitate the combination of the carbon the heat of the blast flame must take care of this important feature. If tests are hurried they will be misleading, often showing combined carbon when in reality the metal is still gray. Charcoal iron requires the exercise of more judgment in furnace working than the coke to maintain the principles of its initial production.

(To be continued.)

The American Ship Building Company.

(By Telegraph.)

CLEVELAND, OHIO, March 29, 1899.—All the moving spirits in the American Ship Building Company, the consolidation of lake shipbuilders, held a meeting in this city on Tuesday, at which further details were perfected. No officers were elected, but it is now decided that the headquarters of the new company will be at Cleveland. The definite organization will not be perfected before the middle of April, but there would seem now to be no doubt of the consummation of the project, unless some hitch should develop relative to the selection of officers. The capital stock of the company will be $15,000,000 instead of $30,000,000 as has been announced, and it may be stated for a certainty that no stock will be on the market; indeed, no outside interests whatever will be represented, the whole plan having been engineered by the chief stockholders in the constituent companies.

The Hoop Iron and Cotton Tie Consolidation.

A movement to which allusion has been made before is culminating in the hoop and cotton tie industry. A company are being formed, who will probably be called the American Steel Hoop Company, who shall include the plants and properties of J. Painter & Sons' Company, William Clark Sons' Company and Lindsay & McCutcheon, all of Pittsburgh; the Monessen Steel Company of Monessen, Pa.; the P. L. Kimberly Company of Sharon, the Portage Iron Company, Limited, of Duncansville, Pa., and the Union Iron & Steel Company of Youngstown, Pa. The latter concern, who were purchased some time since by the National Steel Company, will be transferred to the new organization. In fact it is understood that the Moore Brothers of Chicago are promoting the enterprise and that a number of men identified with the National Steel Company will be on the board of directors. The new company will also take over the Isabella Furnace Company of Pittsburgh, with three stacks, and the coal lands and coke ovens of that interest. It is understood that a working arrangement is to be made with the Federal Steel Company on cotton ties. It is probable also that the Export Iron & Steel Company will be merged with the new concern. We understand that the total tonnage of hoops and cotton ties amounts to about 400,000 tons, that of the cotton ties being estimated at 50 000 tons annually. Some of the plants in the consolidation also make skelp, to the amount of about 250,000 tons per annum. Considerable quantities of bars and other rolling mill products are also handled. It is believed that very important economies can be effected by assigning the straight hoop business to such a continuous mill like the Union and distributing the tonnage effectively. So far as raw material is concerned the close relations with the National Steel Company seems to assure a supply, the latter company on their part securing a very important outlet for tonnage.

German advices announce that there will be held at Dusseldorf, in 1902, an important exposition which is being organized by the Northwest group of "German Iron and Steel Industrialists" and the Society of German Iron Workers. The exposition will represent the great industrial interests of Rhenish-Westphalia. The city of Dusseldorf has granted the sum of $1,000,000 for a site.

New Sheet Mill Project.

It is reported that Pittsburgh capitalists are preparing to build a large sheet mill at Chester, W. Va., opposite East Liverpool, Ohio, a company for the purpose being incorporated with a capital of $250,000 under the laws of West Virginia. Among those named as interested in the enterprise are C. W. and J. R. Trimble and W. N. Voegtly, former owners of the Pittsburgh Tin Plate Works, at New Kensington, Pa. and William Eberhardt, formerly of the brewing firm of Eberhardt & Ober, who sold out to the brewing trust. The plant, it is said, will be erected on a 380-acre tract of land, a large portion of which the new company have secured. The size of the factory has not yet been definitely decided upon, but it will probably have six mills at the commencement of operations. Samuel Diescher of the Hamilton Building, Pittsburgh, is preparing the plans. The product will be iron and steel sheets. Specialties in black iron will also be manufactured.

The Cast Iron Pipe Combination.

The United States Cast Iron Pipe Company have completed their organization, and have formally assumed control of the various properties embraced in the consolidation. The company are capitalized at $30,000,000, equally divided between preferred and common stock. Of this amount $12,000,000 of each class is issued. The following Board of Directors has been elected: Colgate Hoyt, A. C. Overholt, B. F. Overholt, L. R. Lemoine, George B. Hayes, C. E. Nurke, E. C. Fuller, W. C. Proctor, B. F. Haughton, George J. Long, A. F. Callahan and F. C. Miller. Eleven of the directors are manufacturers. Colgate Hoyt represents the Rockefeller interests, who are among the largest stockholders. The following officers have been elected: President, A. C. Overholt; vice-president, A. F. Callahan; secretary, B. F. Haughton; treasurer, George B. Hayes. President Overholt has been chairman of the National Foundry & Pipe Works, Limited, Scottdale, Pa. Mr. Callahan has for many years been connected with the management of Denis Long & Co., Louisville.

At Pittsburgh, on Monday, March 27, contracts amounting to about $1,000,000 were awarded by S. E. Gill and directors of the Parral & Durango Railroad Company of Mexico for material and labor for the construction of the railroad. The contract for furnishing the bridges was awarded to the Shiffler Bridge Company of Pittsburgh. It is not yet definitely known how many or what length of bridges will be needed, as the plans and estimates have not been completed. The order for the tie plates, spikes and other fastenings was given to Dilworth, Porter & Co., Pittsburgh, and the contract for two locomotives was placed with the H. K. Porter Company of that city. An order for two more locomotives was placed with the Baldwin Locomotive Works of Philadelphia. The rails will be made by the Colorado Fuel & Iron Company of Pueblo, Col.

It is reported that the management of the National Steel Company has practically decided to build one new blast furnace at Bellaire, Ohio, another at Mingo, Ohio, and that the plant of the Shenango or old Norway furnaces at New Castle, Ohio, is to be equipped with additional machinery and stores to keep both of their alternate stacks running.

The Central Freight Association has refused to make a reduction in freight rates on iron and steel products shipped to New York for export from the Cleveland, Pittsburgh, Wheeling and Valley mills. The manufacturers some time ago asked the railroads to make a reduction on this class of business, but it has been refused on the ground that the heavy advances in prices warrant the full tariff rates.

The National Machine & Tool Company of Portland, Maine, have been incorporated, with a capital of $50,000, by James H. Reed, Alfred L. Barrett, Brookline, Mass.; Heber C. Peter, Dorchester, Mass.; Henry C. Peabody, Portland.

The W. D. Kent Company, Chicago, Ill., formerly of South Jefferson street, that city, have removed to 216-222 North Union street. They have been making many changes and improvements in the plant, and their new foundry will have a much larger capacity than the old one, the additional capacity being necessary to meet the growing demands of their business.

The New York Machinery Market.

Office of *The Iron Age*, 232-238 William street,
NEW YORK, March 29, 1899.

Advances in prices are now being talked of and arranged by the machinery supply trade. Manufacturers of power transmission machinery report an abundance of work and are withdrawing quotations. Instances have been pointed out where orders have been turned down at prices which were quoted but a short time ago. Cold rolled shafting has been advanced something like 25 per cent. since the first of this year. It is said that the association discounts have narrowed down from 60 per cent. to 35 per cent. Turned steel finished shafting is also advancing. The George V. Cresson Company report an advance of from 10 to 15 per cent. all along their lines. The Dodge Mfg. Company, A. & F. Brown and several other concerns are now notifying their agents of an advance and are withdrawing all quotations previously made. All of these companies report that their stocks of raw materials are about exhausted and that now they are at the mercy of the material merchants. One manufacturer put it in this way: "As long as our stocks of materials, which we purchased when the market was easy, held out we gave our customers the benefit of our low purchases, but as they are exhausted now there is nothing for us to do but to advance prices in proportion to what we are compelled to pay for material." In twist drills, gear cutters and formed cutters the position is very strong, but as far as we can learn there has been no official notification of an advance sent out. The L. S. Starrett Company have increased the price of various sets of machine tools. Hangers, iron and steel pulleys, &c., are now undergoing an advance. Manufacturers of conveying machinery are also getting in line, and we learn that the Link-Belt Engineering Company and Jeffrey Mfg. Company are arranging a notification for the trade of a decrease in their discounts. The Webster Mfg. Company have withdrawn all quotations and are now quoting at higher figures, subjecting all quotations to immediate acceptance.

The composition valves have advanced about 40 per cent., and the manufacturers of the special styles of valves are also quoting an advance proportionate to that in materials. It is said that the Prentice Brothers Company of Worcester, Mass., have added to the price of their drills and that an advance of about 10 per cent. has been made by the Builders' Iron Foundry of Providence, R. I. The prices of return tubular boilers have been advanced considerable, owing to the advance in price of tubes.

A communication which we received from Chicago and print elsewhere is to the effect that a meeting has been held in that city for the purpose of consolidating the wood pulley manufacturers. Members of the trade here admit that they have heard that such a combination was on the carpet, but claim to be ignorant of any definite steps having been taken by their companies toward actual organization.

W. J. Lewis and F. J. Wich, engineers for the Linotype Company, Limited, of England, are now in this country. They are stopping at the Murray Hill Hotel at present and expect to remain here at least the balance of this week. Messrs. Lewis and Wich are visiting the large printing press manufactories, machine shops and linotype plants here. They have made a tour of the shops of the Niles Tool Works Company, at Hamilton, Ohio, and also the Pond Machine Tool Works, at Plainfield, N. J. They are also taking data, prices, &c., regarding American machinery, and the company will soon be in the market for a considerable quantity of machinery, as a large addition will be built to their plant at Broadheath, near Manchester, England. The main offices of the company are located in London. Upward of 1200 men are employed at the works at Broadheath. The visit of Messrs. Lewis and Wich will doubtless lead to the purchase of American equipment for the new plant.

Henry S. Lowd, manager of the Mariopol-Nicopol Mining & Metallurgical Company of Mariopol, Russia, who purchased a large amount of machinery in this country about a year ago, is now in America on the same mission. We understand that he is now in the Pittsburgh district, but that he will return to New York within a few days. Mr. Lowd has previously made his New York headquarters at the Waldorf-Astoria Hotel. The works which are being constructed at Mariopol will probably be the largest steel works in Russia. During his last trip he purchased numerous large tools from Manning, Maxwell & Moore, together with an open hearth equipment. This trip, we understand, is for the purpose of purchasing a Bessemer plant and slabbing mill. It is said that Mr. Lowd has placed a large order with the Morgan Engineering Company of Alliance, Ohio. Julian Kennedy, who is consulting engineer for the company, has recently returned from Mariopol, and last week he placed an order with McIntosh, Hemphill & Co. of Pittsburgh for two large engines.

The Standard Air Brake Company of 168 Broadway, New York, are said to be in the market for machine tools for additional equipment of their plant, which is located on Bay street, Jersey City, N. J. A. J. Breslin, who is located in the New York office, is said to be purchasing the equipment. The original installation of the Jersey City plant was made but a short time ago, and it is said that the company have recently secured a very large order. This necessitated the addition. The company are operating in opposition to the Westinghouse interests, and their financiering is being attended to by J. & W. Seligman, local bankers.

Additional equipment is being purchased by the Manhattan Oil Motor Company for enlarging their plant at 307 Whiton street, Jersey City. This company own the American rights for the building of the Captaine motor. They have recently purchased numerous machine tools in this market. G. Waldron Blake is the manager of the Jersey City plant, and is superintending the enlarging of the plant.

The Cleveland Twist Drill Company are building an addition to their plant at Cleveland.

The General Electric Company of Schenectady, N. Y., will build an addition to their press department.

T. J. Nicholl of Rochester, N. Y., has been appointed managing director of the Pratt & Whitney Company. F. G. Echols, who has for some time been manager of the small tools department, will in addition assume the management of the sales department.

The Hudson River Electric Light & Power Company are said to be arranging for the erection of a 2000 horse-power station.

The American Steel & Wire Company awarded contracts for half of the 12,000 horse-power boiler installation last week.

A contract for 3200 horse-power was awarded to the Sterling Company, and the 2800 horse-power order was given to the Cahall Sales Department.

The Fuel Economizer Company of 72 Cortlandt street and Matteawan, N. Y., were awarded a contract for 1000 horse-power of economizers, to be installed in the new plant of the Atlanta Consolidated Street Railways Company of Atlanta, Ga. Manning boilers have also been ordered. Induced draft will be installed.

The Riter-Conley Mfg. Company of 39 and 41 Cortlandt street and Pittsburgh, Pa., received a contract for building a steel power station and stack at Bristol, England, for the Bristol tramways. The station will be similar to the one which the American company erected at Dublin recently.

The order for high pressure double hex. end unions and fittings for the new Ninety-sixth street power station which the Metropolitan Street Railroad Company are erecting was awarded to the Eastwood Mfg. Company of 120 Liberty street and Belleville, N. J. This company also received contracts for the valves and fittings for the new Bourne Building, which is being erected at 85, 87 and 89 Liberty street, also for high pressure work in connection with Koehler's Brewery, Twenty-ninth street and First avenue, and for high pressure valves, unions and fittings for the New York Navy Yard at Brooklyn.

A four-story addition is being built to the works of the Joseph Dixon Crucible Company, Jersey City, N. J. The building will be used for the manufacture of pencils. The company expect to build a very large addition to their crucible plant during the summer.

An order has been received by the Lidgerwood Mfg. Company of Brooklyn, N. Y., and 96 Liberty street, for a hoisting plant for handling coal near Christiania, Norway. The plant is to be installed within one month of the award of contract.

The Prindle Pump Company have just completed a large shipment of pumps to Yokohama, Japan. Takata & Co. were the purchasers.

We have received the following from the Universal Winding Company of Providence, R. I.: "We are about to install new machinery, and would be pleased to receive catalogues and price-lists from tool and machine makers, principally lathe, milling machine and drill makers."

Regarding the Buffalo, N. Y., municipal gas plant, R. G. Parsons, secretary Board Public Works, writes us the following: "Nothing definite has been done regarding the municipal gas plant for this city. The plans were ordered by the Common Council, in order to ascertain what would be the estimated cost of such a plant, the $2,500,000 mentioned covering the cost of piping the whole city, as well as the plant itself. The Committee on Estimates for the various departments will make a recommendation to the Common Council to-day that $200,000 be added to the lighting appropriation for the city as a starter for the proposed municipal gas plant, but whether or not this will be adopted I cannot say."

The Cincinnati Machinery Market.

Office of *The Iron Age*, Pickering Building,
CINCINNATI, OHIO, March 24, 1899.

It has been several years since the shops engaged in the production of wood working machinery have been so active as they are to-day. There has been a very noticeable increase in business within the past 30 days. Some shops which were short of orders are now working to their limit, and buyers who had no difficulty in purchasing machines two months ago are finding it hard to secure prompt delivery at this time. Not only that change in the general conditions confront buyers, but they are also finding prices stronger and higher than at the date of previous orders. The situation in the iron trade is by this time becoming pretty well understood and reconciled to, and better prices are easily obtainable. Most of the machine shops are covered by contract for castings at much lower than the current rates, and many of them are supplied with other materials sufficient to last several months. The foundries are now getting ⅛ to ¼ cent advance, but many of them are poorly fixed with pig iron supply for the contracts taken three months ago.

In iron working machinery the situation has not changed very greatly. Orders keep piling up, and now there is hardly a shop in this district that is not sold ahead at least three months. Many are unable to promise delivery on new orders for five or six months. The most disagreeable feature of the situation is intensified, as each incoming mail brings a storm of complaints from purchasers whose orders have been on the books for weeks untouched. The only mitigation for this unpleasantness is that all are alike companions in the general misery.

Word has just been received here that the long worked for consolidation of the pipe interests has at last been consummated, and the stockholders of the Addyston Pipe & Steel Company are to receive their equivalent for the $1,500,000 which represents the fixed value of their plants. A strong effort is being made, with a very fair degree of probable success, to have the headquarters of the consolidated company located in this city.

While business at the Architectural Iron Works is very much improved, and a very good share of current contracts are being landed by Cincinnati concerns, yet this line of business is not destitute of troubles, as well as other iron trades. There is a very positive famine in material, and prices and deliveries are so uncertain as to make bidding a difficult undertaking.

Among the recent contracts taken by the L. Schrieber & Sons Company are the following: Iron car barn, 100 x 300 feet, for the Covington Street Railway Company, Covington, Ky., and a steel addition, 100 x 100 feet, to the Block & Pollak Forge Works, at Carthage, Ohio. The contract for the new hydraulic brewery for N. Thoma, Dayton, Ohio, also comes to the same works.

Smith, Myers & Schneier, builders of saw mill engines and machinery, report a satisfactory increase in orders and a good volume of work in sight yet to be taken in by some one. All the lumber districts throughout the South are being heard from, and, in addition to orders for complete outfits, the trade in a small way is excellent. They have just supplied a wagon making plant, at Louisville, Ky., with a complete 6-foot band saw mill. A 16 x 20 engine has just been shipped to Grider, Ark. A 7-foot band mill has just been contracted for by a Catlettsburg, Ky., firm. The most striking order recently booked, however, is one for a 16-foot iron frame veneer mill, to be shipped to Manzanilla, Cuba. This order came to the firm in answer to direct advertising.

The J. A. Fay & Egan Company are busier than for several years past, and, in addition to a full complement of men, have been obliged to abandon the customary half Saturday holiday and work full 60 hours per week. The company are finding an excellent trade in saw mill machinery, the manufacture of which they have very recently taken up.

The Cordesman-Meyers Machine Tool Company are among the concerns who report a very marked increase in active operations within the past two or three weeks. They are finding trade excellent in most planing mill and furniture districts.

The Cordesman Machine Company have been spending considerable time and money lately in getting out some new machines, and for these they are getting plenty of orders. They say that the distinguishing feature of the market is, perhaps, the great manifestation of interest toward anything in the way of a new idea. They report trade much brisker with the Northern and Northwestern planing mill districts. They are just completing arrangements for the sending of a special agent to Europe to represent their machinery in those countries which are now promising well in this direction. There is lots of domestic business in sight, and better prices are obtainable than were 60 days ago.

The Bickford Drill Company are just completing the details of their reorganization, and within the next ten days expect to give the result to the public. In the meantime they are working full time and force, with order books well filled for the most expensive tools they make.

In passing the shops of the American Tool Works Company a day or so since your correspondent noticed two very large machine tools being loaded for shipment. One of them was a 30 x 36 foot shafting lathe, the bed of which was made in two sections for easy transportation. It was marked St. Petersburg, Russia. The other tool was a 54 x 24 foot motor driven lathe for the Chicago Ship Building Company.

The Laidlaw-Dunn-Gordon branch of the International Steam Pump Company have just completed the shipping of the last of six carloads of pumping machinery to China. Their agent in the Orient is finding trade good. They have also booked within the past week an order for 19 pumps, to go to Russia. They have just contracted two high duty pumping engines to the Lorain Steel Works, Lorain, Ohio; a compound Corliss air compressor for Doe Run, Mo., and a compound pumping engine to go to the same place. The contract for the high duty pump for the Washington, D. C., Post Office Building has just been filled by this company. A $30,000 contract with the Monongahela Water Works plant has recently been taken; a high duty engine has been sold to the Lebanon Furnace Company, Lebanon, Pa., and a large air compressing outfit, to be delivered at Evansville, Ind.

The Hawley Down Draft Furnace Company report the following recent contracts: Two furnaces for the Snider Preserve Works, one for the Morrison & Snodgrass planing mill and two additional for the Fleischman distillery, all of this city; two additional for the Wadsworth Salt Company, Wadsworth, Ohio; six for the American Oak Leather Company, this city, and six for the American Oak Extract Company of Pennsylvania; 16 additional for the American Steel & Wire Company of Cleveland, making a total of 42 installed for this company.

Pig Iron Producing Capacity.

There has been published in the *Bulletin* of the American Iron & Steel Association a very interesting statement in detail of the recent and the prospective additions to pig iron producing capacity. The figures show that since the opening of the year 16 furnaces have blown out to March 10, with a capacity of 10,740 tons per week, and that 14 were blown in with a weekly capacity of 10,121 tons. The year started with a rated capacity of 247,500 tons, according to the estimate. The American Iron & Steel Association from direct correspondence with the producers enumerates 48 furnaces which blew in since March 10 or which, according to their owners, were expected to blow in after that date, in March, April or May. The list includes also one large furnace which is expected to blow in during June. In that manner a total capacity of 39,972 gross tons is to be added. That is certainly a large amount, but there is one very important point which has been overlooked, and that is the very uncertain one how many furnaces now running for a long time will be forced out for repairs during April and May. It is in this that all statistical prognostications break down utterly. During January, February and a part of March, according to the showing of the American Iron & Steel Association, furnaces with a capacity of 10,740 tons blew out for repairs. It is to say the least not unreasonable that for the next 10 weeks a like capacity will be rendered temporarily idle. That reduces the capacity estimated to be available by 10,000 tons per week, and cuts a hole into 40,000 tons per week. Besides delays are likely to cause a later blowing in than the owners of stacks figure on. Still, with all these limitations, it is quite clear that there will be a very large addition to output during the next few months.

The Wood Pulley Manufacturers.—The leading manufacturers of wood pulleys are endeavoring to effect a consolidation of their properties. A meeting was held in Chicago on the 23d inst. for this purpose. Among the firms represented were the Reeves Pulley Company of Columbus, Ind.; the Kease Pulley Company of Toledo, Ohio; the Dodge Mfg. Company of Mishawaka, Ind.; the Manashe Pulley Company of Maysville, Ky.; the Buckeye Pulley Company of Marion, Ohio, and the Fulton Pulley Company of Fulton, N. Y. The corporation will be chartered under the laws of New Jersey.

The employees of a number of furnaces in the Mahoning and Shenango Valleys have demanded an advance in wages of 10 per cent., to take effect May 1. These men were granted an increase in wages of 10 per cent. about a month ago.

The American Car & Foundry Company.

An official circular signed by W. K. Bixby, president of the American Car & Foundry Company, states that the constituent companies are the following:

Michigan-Peninsular Car Company of Detroit, Mich.
Jackson & Woodin Mfg. Company of Berwick, Pa.
Missouri Car & Foundry Company of St. Louis, Mo.
Ohio Falls Car Mfg. Company of Jeffersonville, Ind.
Union Car Company of Buffalo, N. Y.
St. Charles Car Company of St. Charles, Mo.
The Wells & French Company of Chicago, Ill.
Terre Haute Car & Mfg. Company of Terre Haute, Ind.
Buffalo Car Mfg. Company of Buffalo, N. Y.
Niagara Car Wheel Company of Buffalo, N. Y.
Ensign Mfg. Company of Huntington, W. Va.
Murray, Dougal & Co. of Milton, Pa.
Minerva Car Company of Minerva, Ohio.

The total annual capacity of the American Car & Foundry Company is: Passenger, 500 cars; freight, 90,000 cars; wheels, 900,000; pipe, 30,000 tons; bar iron and axles, 90,000 tons, and castings, 130,000 tons.

Mr. Bixby states: Orders on the books of the company to-day aggregate over 37,000 cars and 375,000 wheels, besides a large tonnage of bar iron, axles, pipe and castings, the profits on which will exceed the estimate above named. Should the business for the entire first fiscal year continue at the present rate, which seems altogether probable, the profits for the year will approximate $6,000,000, an amount equal to 7 per cent. on the preferred and 13 per cent. on the common.

The present general prosperity of the country, which is producing excellent earnings for the railroad companies, is encouraging them to renew greatly and increase their equipment. We have, since the consolidation, received large orders for cars from the Erie Railroad, Lehigh Valley Railroad, Pennsylvania Railroad, Lake Shore & Michigan Southern Railway, Pittsburgh & Lake Erie Railroad, Minneapolis & St. Louis Railroad, Columbus & Hocking Valley Railway, and Missouri, Kansas & Texas Railway, besides important lesser orders from several smaller roads.

A number of important inquiries have been received from foreign countries and some experimental orders are now being executed. I believe that our foreign trade will eventually equal at least one-quarter of our present output, and especial consideration is now being given to the organization of a foreign department. It is my intention to create a thoroughly competent staff to introduce our products into many fields where agents of ours are at present engaged in preparatory work.

Slag Cement Manufacture in Alabama.

An undertaking highly interesting in itself and of much significance to the iron trade is the establishment at Birmingham, Ala., of a plant for the manufacture of Portland cement. The enterprise has been initiated by J. D. Cheever of Poor & Greenough and a company have been formed under the title of Birmingham Cement Company. A plant is to be built at the Ensley furnaces of the Tennessee Coal, Iron & Railroad Company. It is to have an initial capacity of 1000 barrels per day, to be subsequently enlarged. The plant, for which machinery is now being ordered, is to be completed in four months. The arrangement of the cement company with the furnace plant is that they shall deliver a certain quantity of slag, granulated, at 50 cents per ton, the granulating to be carried out under the supervision of the cement company. A very important feature to the cement maker is that he has the right, under specified conditions and with certain limitations, to direct the burdening of the furnace producing the slag. The use of limestone as a flux is prescribed, since the use of dolomite has a serious effect upon the quality of the cement.

It is estimated that the cost of manufacturing the cement will be about 75 cents a barrel, while the cost of the barrel will be about 15 cents. Cement has sold at a minimum of $1.45 per barrel, so that a large profit will be made.

It is proposed to issue $100,000 of 6 per cent. 25 year gold bonds, $100,000 6 per cent. cumulative preferred stock and $200,000 of common stock. An important advantage to the new company is the fact that no cement is made in the South, so that the new concern have a large share of the Southern field.

Portland slag cement has been thoroughly introduced in this country, first by the importations of German and other slag cements and since by the Maryland Cement Company of Sparrow's Point, Md., and the Illinois Steel Company of Chicago, the latter now increasing their capacity. Slag cement has been used very largely for Government work, the tests having proven satisfactory.

The new enterprise will be under the charge of J. L. Given, who has built and operated a similar establishment, and the new company are to have the right, in their territory, to manufacture a new article—cement iron piling—with which very promising experiments have been made during the past year.

One point is made in connection with cement manufacture from blast furnace slag, and that is that it can only be carried out in a satisfactory manner when a group of furnaces is available, because it is only then that the necessary selection of the slag can be made in sufficient quantity to secure economic production.

Weights of Aluminum, Steel and Copper Sheets.

The following table, giving a comparison of the relative weight of aluminum, steel and copper sheets, is published by Janney, Steinmetz & Co., Drexel Building, Philadelphia:

Weight, per square foot, of Sheets.

Gauge No. B & S.	Thickness in inches.	Aluminum.	Steel.	Copper.
0000	0.46000	6.494	18.700	20.838

The South Chicago Furnace Company.

The South Chicago Furnace Company organized at Chicago on Monday under the laws of Illinois, with a paid up capital stock of $300,000. They have purchased the old Calumet Iron & Steel Company's entire plant at Cummings, near South Chicago, consisting of about 60 acres of land, a blast furnace and a rolling mill, the latter being capable of producing various shapes of bar iron, bar steel, nails and spikes. The new company immediately put a force of workmen on the plant to get it into working condition as rapidly as possible, expecting to have the blast furnace in operation by June 1, and the balance of the plant as rapidly thereafter as possible. The work now being done is for the purpose of putting the entire plant into the very best modern shape with the expectation of making all the products of which it is capable. The records show that the price paid for the plant is about $400,000 cash. The officers of the company are as follows: William L. Brown, president; D. M. Cummings, vice-president; B. W. Wells, secretary and treasurer, and Fred. H. Foote, consulting engineer. The directors are William L. Brown, D. M. Cummings, Charles Deering, Walter F. Cobb and Charles H. Foote. The blast furnace product will be sold by Pickands, Brown & Co., and the other products by the company. New machinery in all parts of the plant where necessary and a supply of iron ore, coke, limestone and other essential materials for the operation have all been contracted for.

This disposes of the rumor that the property has been purchased by the Federal Steel Company, and it is officially stated that neither that company nor any other have any connection with this plant in any shape or manner, but it is a separate and distinct operation exactly as set forth above.

Bradlee & Co. of Philadelphia have recently completed for Charles J. Colonna of Norfolk, Va., for use on his Marine Railway, one piece of 2¼ inches, D. B. G. Special, side welded marine railway chain, 725 feet in length, weighing approximately 30,000 pounds.

HARDWARE.

Condition of Trade.

THE general tone of the market continues strong, with an active demand for goods. The state of the Iron market is such as to necessitate advances in many lines, and this has the effect of giving a marked firmness to prices and at the same time stimulating trade. In some kinds of goods there is a good deal of complaint on the part of manufacturers of difficulty in obtaining raw material, and with the generally liberal purchases there are some indications that a number of goods will be hard to get before the season is over. From the report which follows of the special features of the market it will be seen that several advances are announced. In goods in which large advances have been made in price the trade are buying with caution and the market will be tested as to its real and permanent strength when the trade are obliged to buy new stocks at new prices. In the meantime both jobbers and manufacturers find a much more favorable condition of things than for a long time, and with prudent management and conservative methods business should be large and profitable. From the retail trade reports are also encouraging, although retail business generally throughout the country does not in all cases show activity corresponding to that prevailing in manufacturing and jobbing circles. There is, however, doubtless a very hopeful feeling and an evident improvement, with the prospect of a good trade during the season.

Chicago.

(By Telegraph.)

Shelf Hardware jobbers report continued heavy business. Their trade during March has been much beyond that usually observed in this month. It is rather remarkable that no complaint has been heard of bad roads or mud blockades. These have caused more or less interference in the March movement in Hardware in other years. Jobbers are looking forward to April and May as months of even greater activity than March. Screws were advanced during the week from 87½ to 85 off, which is a jump upward of 20 per cent. Sheet Zinc, which had been marked down ¼ cent, has been advanced again to 8 cents for 600-pound casks of 36-inch sheets. The Steel Sheet trade is in a peculiar condition owing to the refusal of many manufacturers to quote prices. Jobbers fortunately have good stocks on hand, but these stocks are now being drawn upon from unusual sources, and will be likely to be rapidly reduced. A very good movement is reported in staple goods of all kinds. The high prices have not checked the demand for Wire Nails or other Wire products. Poultry Netting is in good supply, not being as scarce as in previous years at this time, although the hight of the season is yet to come. Heavy Hardware jobbers report an unusually good volume of business, finding an excellent demand for all kinds of Wagon Stock and Carriage Material, as well as Iron and Steel.

St. Louis.

(By Telegraph.)

The month's business has been highly encouraging. No particular line seems to have forged ahead in the demand. Tinware and Sheet Metal Stamped Ware of all kinds show advances, and are bringing about 15 per cent. better prices. The business in this particular line of manufacture is said to be in volume just what makers care to book, as in other branches of the Metal trade. Buyers are fondly hoping that good sized orders sent to makers on basis of old discounts will be snapped up. As showing the tone of the market it must be said that such orders do not meet with acceptance. Makers of Stamped Goods believe prices of Tin Plate will not be immediately lowered. Builders' Hardware is finding buyers for quick use and retail stocks are moving more freely. Paints, Oils and Varnishes stocks are being put in good shape and larger sales are looked for. The Wire Cloth situation is no brighter and manufacturers of Screen Doors now quote new prices. The Heavy Hardware trade is enjoying a fine trade and much more is promised with the advent of spring.

Notes on Prices.

Wire Nails.—The situation in Wire Nails is substantially the same as last week, there having been no further change in prices, with a continuance of a good demand. The market is represented by the following quotations, f.o.b. Pittsburgh or Cleveland:

To jobbers in carload lots	$2.00
To jobbers in less than carload lots	2.02½
To retailers in carload lots	2.05
To retailers in less than carload lots	2.15

As natural under the circumstances Nails are still in some cases obtainable from second parties at lower prices than are now being named by the manufacturers, who are very firm in maintaining prices, goods being in most cases, especially to the smaller trade, sold at a figure which includes freight to destination.

New York.—A good tone characterizes the market in New York and vicinity and merchants report a good demand with a prospect of increase as the season advances. The prices regularly named as based on the manufacturers' quotations are as follows: Carload lots on dock, New York, $2.15 to $2.20; small lots from store, $2.30 to $2.35. These are in some cases shaded.

Chicago, by Telegraph.—Manufacturers have had an excellent trade, which shows no signs of diminution. They continue to quote carload lots at $2.15, Joliet and De Kalb. Jobbers quote small lots from stock at $2.25 and also state that they are enjoying a good volume of business.

St. Louis, by Telegraph.—The market is unchanged on Wire Nails and demand continues good. Manufacturers' carload quotation to jobbers continues $2.15, St. Louis. Jobbers are selling small lots at $2.25 to $2.30.

Pittsburgh —Conditions in the Wire Nail market are unchanged. Mills of the American Steel & Wire Company are busy, mostly on orders booked before the last advance, and the movement in Nails is heavy. Jobbers report a large demand from the small trade, and the outlook is that the volume of business in Wire Nails this spring will be the heaviest ever known. We quote Wire Nails as follows: To jobbers in carload lots, $2; to small buyers in carload lots, $2.05; to retailers in less than carload lots, $2.15, f.o.b. Pittsburgh or Cleveland. It should be noted that taking effect Saturday, April 1, the minimum weight of carload lots of Wire Nails will be 30,000 pounds instead of 24,000 pounds as heretofore.

Cut Nails.—The Cut Nail market is decidedly firm and prices are quotably higher than a few weeks ago. The market in a general way is represented by the quotation of $1.60 to $1.65 for carload lots f.o.b. Pittsburgh, but

some manufacturers are naming slightly higher prices. The Eastern manufacturers have been conferring with reference to measures which will secure a more uniform market in their territory.

Chicago, by Telegraph.—No change has been made by jobbers, who continue to quote $1.65 for small lots from stock.

St Louis, by Telegraph.—No startling sales can be reported in Cut Nails. They meet with an even sale just now at $1.65 for small lots from store.

Pittsburgh.—The volume of business in Cut Nails is fairly large and prices are strong. Mills anticipate a good spring trade. We quote at $1.60 to $1.70 in carload lots f.o.b. Pittsburgh.

Barb Wire.—The indications are that the demand for Barb Wire during the season will be very heavy and there are already indications of a prospective shortage. There has been no change in price since our last issue, the manufacturers' quotations being as follows, f.o.b. Pittsburgh or Cleveland:

To Jobbers in carload lots,	Painted	$2.10
" "	Galvanized	2.50
To Retailers "	Painted	2.15
" "	Galvanized	2.55
" in less than carload lots,	Painted	2.25
" " " " "	Galvanized	2.65

These prices are sometimes cut more or less freely, but the trade generally are disposed to hold Wire firmly in view of the strictness with which prices are maintained by the manufacturers and the prospect that the demand will be large.

Chicago, by Telegraph.—The demand for Plain Annealed Wire is exceptionally good, but the movement of Barb Wire is not so large as it was. Manufacturers expect a falling off in the demand for Barb Wire at this time and until out door work is actively resumed. They quote carload lots Painted Barb Wire $2.25, Joliet or De Kalb; Galvanized, $2.65, and Smooth Annealed, $2, base. Jobbers quote small lots from stock at 10 cents per 100 above these prices and report a continued heavy business in Plain Wire, but some falling off in the demand for Barb Wire.

St. Louis, by Telegraph.—The usual movement on Barb Wire is noted. Stores have a good stock in readiness for quick use at $2.40 in small lots. Galvanized can be had at an advance of 40 cents per 100 pounds.

Pittsburgh.—There is a fair movement in Barb Wire and a considerable increase in demand is looked for in April. We quote to large buyers in carload lots: Painted, $2.10; Galvanized, $2.50; to small buyers in carload lots, $2.15 for Painted; Galvanized $2.55; to small buyers in less than carload lots: Painted, $2.25; Galvanized, $2.65, f.o.b. Pittsburgh.

Smooth Wire.—Quotations are as at our last report, being represented by $1.85, base, for Plain Wire, f.o.b. Pittsburgh or Cleveland, and $2.25 for Galvanized. To single carload buyers the price is 5 cents higher. There is already a heavy movement of Smooth Wire, with the prospect that the consumption this year will be materially larger than last year, which broke former records.

Pittsburgh.—There is a heavy demand and there is some complaint from consumers over delayed shipments. The tonnage in Smooth Wire this spring promises to be the heaviest ever known. We quote at $1.85, base, with 40 cents advance for Galvanized. To single carload buyers the price is $1.90, base, and for less than carload lots $2, f.o.b. Pittsburgh or Cleveland.

Bright Wire Goods.—The manufacturers of Bright Wire Goods have adopted a revised list, which goes into effect April 1. This list is given below. It will be observed that it is materially lower than the late list and is subject to much smaller discount, the result of the new list and discount being a further advance in the prices of goods. The new list is as follows, subject to a discount to the general trade of 40 and 10 per cent.:

BRIGHT WIRE GOODS.

Revised List April 1, 1899.

Stair Rod Eyes.

Bright, per gross ..... $0 75 Bronzed, per gross $0.90

All Screw Eyes with Short Shanks (½ numbers) not listed above are five cents list per gross higher than the corresponding regular numbers.

Screw Hook and Strap Hinges.—A further advance has been made in the price of Screw Hook and Strap Hinges, which are now represented by the quotation of 3¼, 3 and 2¾ cents, with the usual concessions to large buyers.

Carriage Bolts, Machine Bolts, &c.—As the result of another conference between the manufacturers of this line of goods prices are still further advanced. The meeting, which was held at Cleveland, was largely attended and thoroughly representative. The manufacturers agreed in reporting an excellent condition of business, with a fair demand, notwithstanding the fact that most of them are occupied on old orders and are obliged to meet the competition of goods purchased at lower prices. An advance of 5 per cent. was made in Common Carriage Bolts and an advance of about 10 per cent. in Machine Bolts, Bolt Ends, &c. The regularly published prices on these goods are as follows, but large buyers can obtain an additional 10 per cent. discount:

	Per cent.
Common Carriage Bolts	70
Machine Bolts	70 and 10
Bolt Ends	70 and 10

Lag and Coach Screws.—Similar action was taken by the manufacturers in regard to Coach Screws, the regularly announced prices being as follows, subject to an extra 10 per cent. in large orders:

	Per cent.
Gimlet Pointed Coach	80
Common " "	80 and 5

Nuts.—The market for Nuts is characterized by a firm tone and at the meeting last week a further advance was made. Nearly all the manufacturers are full of orders, and with the condition of the market in raw material and the probability that it will be still higher prices are firmly maintained. The regularly announced prices are as follows, with a concession of 1-5 cent additional to large buyers:

	Cents off list.
Cold Punched, Square, plain	5.30
" " Hexagon "	5.50
" " C. T. & R., Square	5.30
" " " " Hexagon	6.00
Hot Pressed, Square	5.70
" " Hexagon	6.30

The action of the manufacturers' embodies, it will be seen, an advance of about ½ cent.

Stove, Plow and Tire Bolts.—An advance of about 10 per cent. has also been made in the price of Stove, Plow and Tire Bolts, which are now quoted at discount 70 per cent.

Harrow Teeth.—In view of the increased price of the raw material an advance has been made in the price of Harrow Teeth, which are now quoted in round lots at 2 and 2.10 cents.

Horseshoes.—The situation in Horseshoes remains as at our last report. The manufacturers who were recently in conference are endeavoring to maintain the somewhat higher prices then determined upon, but in view of the fact that a leading manufacturer has made no change in his prices the market is not entirely even. There will be a further conference on April 2 and the outcome will be awaited with interest.

Trace Chains.—The market for Trace Chains is decidedly firm, not only on account of the advances which have been made by the manufacturers, but also from the likelihood that a scarcity may be developed. This is owing not only to the extent of the demand, but to the fact that the manufacturers find it very difficult to obtain the raw material in sufficient quantities. It looks as if the question of obtaining the goods would be more important than the price.

Axles.—The manufacturers of Axles are conferring with reference to the condition of the market in this line, and it is thought not unlikely that an advance will be decided upon.

Wrought Goods.—The market for Wrought Goods is decidedly firm and a further advance has been made. The market is represented by the quotation of 90 to 90 and 10 per cent., according to the character of order, &c.

Fittings, Cast and Malleable.—The tone of the market in this line is decidedly firm and another advance was made last week.

Galvanized Pails.—As a line of goods directly affected by the important advances which have taken place in the raw material, Galvanized Water Pails, Fire Pails, &c., are considerably higher, manufacturers having withdrawn old quotations and substituted new prices.

Silver Plated Ware.—As the result of agreement between the manufacturers and the course of the market in the raw material, Silver Plated Ware, both Flat and Hollow, is held at prices considerably higher than those ruling a short time ago. The Flatware is represented in a general way by the discount of 50 and 10 per cent., to 50 and 10 and 5 per cent., somewhat lower prices being obtainable on good orders.

Augers and Bits.—The manufacturers generally are maintaining the advanced prices recently determined upon, but the market is not entirely even. The prices of the regular goods are interfered with somewhat by the fact that most of the jobbing trade are making concessions in view of their having stocks purchased at lower prices. The competition of the cheaper or second quality goods has also something of a disturbing effect on the market, as a good many merchants are satisfied to buy them, notwithstanding the uncertainty as to the quality.

Wire Brads.—In sympathy with the movement in Wire Nails in kegs the papered goods are firm in price and quotations are somewhat advanced. The market is represented by the discount of about 85 per cent. to good buyers.

Cast Butts.—An advance has been made in the price of Cast Butts, Loose Pin, Loose Joint, Parliament, &c. The manufacturers' discount on these goods is now 75 per cent.

Padlocks.—An advance has been made in the price of Wrought Iron Padlocks, and the market is now represented by the quotation of 75 and 10 per cent. discount.

Screws.—A further advance has been made in the price of Screws, the base discount on Flat Head Iron being now 85 per cent. This action was taken by all the manufacturers and is announced under date March 22. The present discounts on Screws are as follows, with an additional discount of 2 per cent. for cash in ten days:

Iron.

	Discount. Per cent.

Flat Head	75 and 10
Round and Oval Head	75

Kilbourne & Jacobs Mfg. Company.—Under date March 22 the Kilbourne & Jacobs Mfg. Company, Columbus, Ohio, announce advances, which are rendered necessary by the increased cost of Iron, Steel and other material. The advances are as follows:

Drag Scrapers.

	Each, advance.
All kinds	$0.50

Wheel Scrapers.

Pressed Bowl and Square Box.

Nos.	Each, advance.
1	$1 00
2	2.00
3	3.00

Plows.

Nos.	Each, advance.
5 and 15	$1.00
3 and 13	1.00
106	1.00
105	1 50
101	1.50
103	2.00

It is also intimated that in view of the increased cost of all kinds of material and the very heavy demand a further advance is probable in the near future.

Market and Stone Wire.—Manufacturers of articles into the construction of which Wire enters report a good deal of inconvenience on account of difficulty in obtaining it. The market also is in such condition that it is not easy to get quotations or to cover their prospective requirements with any certainty as to the cost of the goods. The trade also find it difficult to obtain these Wires, and there is some uncertainty as to what are to be considered current prices.

Tacks.—Some of the manufacturers have made minor changes in their quotations, mostly in the way of withdrawing some special concessions. The market thus shows its firmness and its tendency toward higher prices. There is still a good deal of unevenness in current quotations, and the jobbers do not in all cases keep pace with the manufacturers' advances.

Shovels and Spades.—The advance of 75 cents a dozen which was recently made by the associated manufacturers is firmly maintained by them, but there is more or less shading of prices throughout the trade. In regard to the prices of the Oliver Ames & Sons Corporation, to which reference was made in our last issue, there has been some misunderstanding in the trade, many of whom overlooked the fact that the 5 per cent. discount heretofore given to purchasers of $200 worth in six months was withdrawn in the recent discount sheet. The fact that this discount is not now given makes an advance of 5 per cent. on their Ames brand as well as on other goods.

Cordage.—A further advance of ¼ cent per pound was made March 27 by manufacturers in the price of Rope, as follows:

	Per pound, cents.
Manila, 7-16 inch and larger	9½
" ⅜ inch	10
" ¼ and 5-16 inch	10½
Sisal, 7-16 inch and larger	8½
" ⅜ inch	9
" ¼ and 5-16 inch	9½
" Lath Yarn	8

Manila Tarred Rope, 15-thread, is quoted 9½ cents, as is also Manila Hay Rope, medium. The price of Jute Rope is 5½ to 6 cents.

These prices are for carload lots, ¼ cent per pound advance being charged for less quantity. The higher price of Hemp is responsible for the advance in Rope. Though some jobbers are shading these prices there is as a rule a stronger feeling and a nearer adherence to card rates. Demand is fair for actual requirements.

Binder Twine.—The advance in the price of Hemp has also affected Binder Twine, which was advanced ¼ cent on March 27 by manufacturers. The following are the present carload prices, f.o.b. Eastern factories, with an advance of ¼ cent per pound for less quantities:

	Cents.
White Sisal, 500 feet to pound	9⅜
Standard, 500 feet to pound	9⅜
Manila, 600 feet to pound	10⅜
Pure Manila, 650 feet to pound	10⅜

Glass.—A portion of the employees in some of the combine Glass factories have demanded an increase in wages, resulting in a suspension of work and a closing down of the plants. Just how this will affect the independent factories is not known, but in Glass circles it is considered that the trouble precedes an advance in the price of Glass by the combine. From present indications it is assumed that the combine will not be in force later than next fall, and that there will be an open market with the consequent demoralization of prices. The outcome of the struggle for supremacy will be watched with interest. Eastern jobbers are quoting 85 and 5 per cent. discount for less than carload lots. American Glass Company's prices to the regular trade are as follows:

Districts.	A.	B.	C.	D.	E.
5000 boxes or more	85 & 10	85 & 10	.....	.....	85 & 10
Carloads	85	85	85 & 5 & 2½	.....	85
3000 boxes or more	85 & 5	85 & 5	.....	.....	85 & 5 & 2½
1000 boxes or more	.....	.....	85 & 10 & 2½	.....	.....

These prices are subject to freight allowance.

Paints and Colors.—The past week has shown somewhat less activity in the White Lead market and orders are filled more promptly. With better weather the demand will probably increase. Prices remain unchanged, as follows: In lots of less than 500 pounds, 6¼ cents; 500 pounds or over, 5½ to 5¾ cents.

Oils.—*Linseed Oil.*—An advance in the price of Linseed Oil was made by manufacturers March 24 as follows: City Raw in lots of less than five barrels, 48 cents per gallon; five barrels or more, 47 cents. Out of town brands 1 cent less. Calcutta Oil, 58 cents per gallon; Boiled Oil, the usual 2-cent advance per gallon. The advance in the cost of Seed is the cause of the higher price, and some mills have closed down on account of the price and scarcity of Seed. Those well versed in the Seed market would not be surprised to see 50 cent Oil. Large purchasers have about covered their requirements, and the market is also devoid of speculative features. The weather for the past month has not been conducive to the consumption of Oil, resulting in a moderate business. The market is firm at the advance, except in some cases where competition is sharp dealers who have stocks bought at lower prices may shade prices to secure Paint orders.

Spirits Turpentine.—The receipt of the first of the new crop of Turpentine at Savannah rather earlier than anticipated by some resulted in a weak and falling market. From last week's quotation of 48 cents for machine made barrels the price has declined to 45½ cents. Buyers are not free purchasers on a falling market, so it is difficult to forecast the immediate future of Turpentine. Old stocks are light at all points and it is estimated that from 90,000 to 100,000 barrels have been sold for summer delivery, which is supposed to represent about half of the receipts for the summer months. A light crop has been expected because of the lateness of the season, and it is anticipated that the market will recover itself, at least later in the season.

Hardware Organizations.

South Dakota Retail Merchants' Association.

The South Dakota Retail Merchants' Association, who have as a motto "In union there is strength," are moving energetically to secure from their State Legislature the passage of a group of laws designed to benefit them. This association embraces all lines of trade. They have urged each member of the association to communicate with their Senator and Representative, stating what they as an organization want, the data and necessary material for the communication having been worked into condensed form by the executive branch of the association.

Among the bills sought to be enacted into law is one relating to garnishment, which also defines the method of procedure in such cases, being a copy of the Illinois law. Another bill relates to the compounding and adulteration of food products. Another law pertains to the sale of White Lead, and is aimed at adulterated stock sold as pure goods.

Another proposed act provides for licensing transient

retail merchants in cities and towns, so that merchants temporarily disposing of bankrupt, fire and other stocks shall pay something in taxes toward the government, as the regular dealer does.

Still another, copied from New York statutes, relates to the regulation of the sale of merchandise, and to prevent misleading and dishonest representation, particularly aimed at misleading and lying advertisements. The remaining bill which they seek to have passed relates to exemptions of homesteads and personal property. This is a move to benefit the creditor instead of the debtor. It proposes to reduce the value of a homestead from $5000 to $1500, and personal property exemptions one-half. The effect of this law would be to leave the debtor with less property exempt in case of a levy for debt.

Missouri Retail Hardware Association.

A cordial invitation has been extended to every Hardware merchant in the State to be present at the meeting at St. Louis on April 11 and 12, when the organization of a retailers' association will be perfected. The sessions will be held at the Lindell Hotel. E. Thomas of Trenton, Mo., who is secretary of the Committee of Arrangements in charge of the meeting, will be pleased to answer any inquiries touching the gathering which may be sent him. Mr. Thomas hopes that merchants who are intending to be present will notify him promptly so that arrangements can be made for their proper accommodation. A special railroad rate on the certificate plan has been secured, so that the round trip from any point in the State to St. Louis and back can be made at the rate of one fare and a fifth. This important concession has been secured through the Interstate Merchants' Association. The certificate plan is described by Mr. Thomas as follows:

When you buy your ticket purchase it at full fare one way only to St. Louis, and secure from the ticket agent at your station a certificate to the effect that you have purchased such ticket. Do not buy a round trip ticket. This certificate must be signed by you in the presence of your ticket agent. Insist on ticket agent giving you a certificate showing amount you paid for ticket.

When you arrive in St. Louis leave the certificate at the office of the Interstate Merchants' Association, 704 Washington avenue. Do this the day you arrive in St. Louis, to enable you to receive the advantages of the reduced rates to return.

Failure to procure or present a certificate from your station agent invalidates any claim for reduction in return fare. Be sure to get a certificate and be sure and leave it at the office of this association on the day you arrive in St. Louis.

As we have already announced, a number of interesting papers will be read and addresses made at the meeting by well-known and enterprising Hardwaremen, and a large attendance is hoped for, so that the association may make a good start. It would certainly seem to be to the personal interest of every Hardware merchant in the State to identify himself with an organization of this sort, and if not present at the meeting to at least apply for membership in it. The success of Hardware associations in Minnesota, Ohio, Iowa and other States has amply demonstrated their usefulness in mitigating if not entirely correcting the many abuses which have crept into the trade.

Minnesota Retail Hardware Association and Mutual Fire Insurance.

A bill has been introduced in the Minnesota Legislature authorizing the organization of mutual retail Hardware fire insurance companies. With the probable passage of this bill the way will be clear for the Minnesota Association to form a mutual fire insurance company for the benefit of its members, thus adding greatly to its value and usefulness.

Southern Hardware Jobbers' Association.

It has been decided to hold the ninth annual convention of the Southern Hardware Jobbers' Association at Atlantic City, N. J., on June 14, 15 and 16 next.

Hardware Club of New York.

The annual meeting of the Board of Governors for the election of officers was held on Thursday evening, March 23, when the following gentlemen were elected to fill the offices mentioned:

GEORGE H. SARGENT., President.
EDWARD C. VAN GLAHN, Vice-President.
THOMAS F. KEATING, Treasurer.
JAMES H. KENNEDY, Secretary.

After disposing of the business of the evening the new president escorted the retiring executive, Mr. McCartee, into one of the dining rooms, followed by the remaining members of the board. Here Mr. McCartee beheld a beautifully decorated table, and then to his complete astonishment the governors proceeded to entertain him at dinner as a testimonial of their great appreciation of his worth. A programme prepared for the occasion, arranged by Alfred D. Clinch, who was in charge of the arrangements, was at each place and contained the following inscription: "Complimentary dinner to Peter McCartee, president of the Hardware Club of New York, 1895-1899, by the Board of Governors." Inside was a portrait of Mr. McCartee and upon the following page the acrostic here given:

Principle is ever his motto, not expediency.
Everything handsome about him.
Touched nothing that he did not adorn.
Elegant but not ostentatious.
Reputation is more valuable than money.

Much may be made of a Scotchman if he be caught young.
Circumstances are the creatures of men.
An honest man's word is as good as his bond.
Rather be right than be President.
Then he will talk! How he will talk!
Every inch a king.
Everything comes if a man will only wait.

At the proper time Mr. Clinch for the governors presented to Mr. McCartee a handsome sterling silver bowl and ladle bearing this inscription: "Presented to Peter McCartee, President of the Hardware Club of New York 1895-1899, by the Board of Governors, March 23, 1899."

The warm regard in which Mr. McCartee is held by the club and their appreciation of the marked success of his administration are given formal expression in the following resolutions adopted at the annual meeting:

Whereas, Peter McCartee, having declined to accept a renomination on the Board of Governors of the Hardware Club, leaves the presidency after having served more than three years as the chief executive of this club in a most able, capable and efficient manner; be it, therefore,

Resolved, That the members of the Hardware Club, convened at its annual meeting, express to Peter McCartee, its retiring president, their full and complete appreciation of the very able and efficient services performed by him during his term of office, also for his ever courteous and genial manner alike to members and their guests, and for his untiring energy in placing this club in the front rank of down town clubs in Greater New York; and, further,

Resolved, That these expressions, upon a unanimous vote, be spread upon the minute book of the club in recognition of his labors in furtherance of the interests of the club.

Correspondence.

14 WARREN STREET, NEW YORK,
March 24, 1899.

To the Editor: In your report of the dinner of the New England Iron & Hardware Association, in your last issue, my impromptu remarks were condensed very skillfully by your reporter, but in some way I am made to say that "the present remarkable industrial conditions would not last long." To say this, after all the depression of the previous five years, seems like a case of hopeless pessimism. No! I think our present prosperity will last some time. The wonderful balance of trade in our favor, with the cheapness of money, makes it possible for every city, town and county throughout this broad land to make long needed improvements, and enables many legitimate enterprises to be carried out, employing labor extensively and using material of all

kinds. There can hardly help being an era of great prosperity while this condition lasts and general confidence continues.

The point I wished to make was that the productive capacity of our people is so great, with their money, inventive genius, fine workers and intense energy, that the tendency is, under a powerful incentive, as at present, to overproduce in time. How soon this may come is a question as matters now are, but it is likely to come sooner or later. In view of this my opinion is that the export of our products is still the great safeguard against a glutted market and all that it means.

The very wonderful strides of the United States recently in material prosperity and consciousness of its own power gives a new and intense stimulus to efforts for increasing our export trade and securing all the advantages to which our position as a nation is entitled. Everything is favorable to us, and now is the time to carry our commerce throughout the world in the American fashion, a way which is peculiar to ourselves, and which in other matters recently has excited some astonishment abroad. C. S. VAN WAGONER.

The Question as to Advancing Prices.

To the Editor: We have been struggling with an overabundance of orders from our jobbing trade, and while we do not see how we can possibly make a profit or continue to furnish our lines at the present prices without an actual loss, we have not, and shall not, advance prices upon our general lines until we have more thoroughly tested existing conditions, for several reasons, some of which are: We have been many years in establishing our goods in the hands of our present States jobbing and export customers, and an advance in price will certainly disturb their distribution of the goods, and probably, in some instances at least, induce them to find other sources of supply, so encouraging competition against our now established lines. Second, there is a considerable belief among the trade that the advance of metals is caused by combine and trust interests, and many are emphatic in their expression of the belief prices will soon recede nearly if not quite to the low prices of a few months ago, which is not in accord with our views, but should it occur the situation of the manufacturer who had advanced his prices would be most disastrous.

Although this is our busy season, we believe the excessive number of orders we are now booking is somewhat from the fact we have not advanced prices, though we do not sympathize with the view as expressed by some large manufacturers, that jobbing dealers are stocking up for future trade. Our experience is, where our customers have ordered in lines larger than last year, they have already taken what was intended for April shipments, and are sending us lists of goods they are entirely out of, asking us to hurry forward, which would not be the case were they carrying stocks. We believe our customers have less goods of our manufacture in stock than at any previous time in our manufacturing history, all of which tends to confirm our determination to continue old prices rather than disturb the business relations with trade we have been so many years in establishing, particularly in export markets.

NEW ENGLAND.

American Hardware in Germany.

DRESDEN, GERMANY, February 27, 1899.

To the Editor: From my personal observation I should judge that there is a large market here for American Hardware, especially in heating and sanitary lines, plumbing apparatus and appliances, &c., as things seem to be backward here. Further, there appears to be a good opening for small and shelf ware, as well as Tools. As business is good here at present and people are prosperous on account of advancing wages, the opportunity for the introduction of American goods seems to be better than at any other time. Importers in other lines have certainly no reason to regret it, as American wares are *selling* here at prices considerably above those at home.

Letters from the Trade.

Our readers are invited to discuss in these columns questions of trade interest connected with the manufacture or sale of Hardware. We shall be pleased to have a free expression of opinion on subjects deserving the attention of Hardware merchants and manufacturers.

Yard Marking of Oil Cloths.

A good deal of attention is being given by manufacturers to the matter of putting up goods so as to serve the convenience of the retail trade. In this connection the following suggestion from an enterprising house in New York in regard to the marking of Oil Cloths will be of interest:

Would not manufacturers of Oil Cloths and Linoleums confer a favor upon all retailers by yard marking all products on the edge, thus saving the necessity of unrolling yards to find their contents? Inventory has just suggested this matter.

A Commendation of the Spalding Policy.

This letter is from a well-known Ohio merchant, and refers in terms of approval to the Spalding policy:

The radical change proposed by Spalding Bros., as announced by the sending of a small pamphlet by the retail trade throughout the country, is undoubtedly a move in the right direction. The retail trade will now have a chance to handle the goods with a degree of profit.

Then in this new method the consumer comes in contact with the retailer, the person to whom he naturally should look for his supplies, for a personal inspection of goods is by far the better way to buy goods. A catalogue description of goods is not always satisfactory. There are oftentimes flights of fancy in the description of goods by catalogue, and the consumer learns "that words are sometimes used to conceal thoughts."

This is probably not the time or place to enter into a discussion of the reasons why the consumer should buy of the retailer rather than from the catalogue house or the so-called "jobber." We are glad that the radical change is to be tried, and we await the outcome with a good deal of interest.

The Relations Between the Jobbing and Retail Trade.

In the following letter our correspondents discuss the above question, and allude to the fact that in some cases the jobbers go to the consumers and thus interfere seriously with the business of the retail merchants:

An article published in *The Iron Age* on February 2, concerning the movement on foot among the jobbers in Canada to prevent manufacturers selling to the retailers, undoubtedly concerns the jobber in the United States fully as much, but there is another side to the matter in which the retailer finds equally as much room for complaint, with reference to the methods now in vogue among many of the jobbers. The retailer could take revenge by refusing to purchase from the jobber who sends a representative to call first upon the trade and immediately thereafter upon the consumer, to whom he names even a lower price than that given the retailer. In a certain city, noted especially for its product of Boilers and Engines, it is utterly impossible for the retailer to meet the ridiculously low prices made by some of these poor downtrodden (?) jobbers, who resort to the in-

famous method of calling upon the consumer and stealing trade in this unprincipled manner. Shall the retailer lie down like a spaniel and lick the hand that beats him?

The jobber, almost without exception, has no one to blame but himself for his loss of business among retailers. The moment a retailer quotes a price to the consumer, and is informed that he is in receipt of a quotation from Blank & Blank, jobbers, as low or lower than he himself is paying, he immediately turns to the manufacturer for a price that will put him in position to meet this decidedly unjust competition, and after making a satisfactory explanation the manufacturer decides to place him on the ground floor, if a certain amount of goods can be disposed of.

Then the retailer calls upon the trade which rightfully belongs to him, and agrees to meet the price; while under the system of the jobber he would be literally robbed.

The wholesaler is entitled to nothing less than total elimination for his gross violation of good business principles. There is, however, still hope for him if he comes to a realization of the situation and decides to play fair with the retailer.

An American Manufacturer's View of Chinese Trade.

THE information concerning China here given, as about Japan in our issue of January 19, reflects some of the existing conditions in that widening market and densely populated part of the world, as they appeared to a representative of the largest company in its line in the United States and probably on the globe.

The opening up of China is yet a matter of the future. One cannot go there and start in business as in other countries. The Chinese have the same old established system of doing business as in Japan.

Great Importing Houses in Treaty Ports.

The great importing houses are in the principal ports, among which are Shanghai, Tientsin, Foo-Chow, Newchwang and Hong Kong, there being no other open ports of much importance. Hong Kong is an entirely free port. Other treaty ports have a low scale of duties which do not greatly interfere with commerce. In the treaty ports English, Continental and American firms have been established for many years. The palmy days of trade when 100 per cent. profit was normal have passed.

The Compradore.

The central pivot on which Chinese business rests is the "Compradore," signifying buyer. All business is done through him. He is the head of the staff of Chinese salesmen and takes matters in his own hands. He sells goods, collects money and also a commission, which is not infrequently larger than his principal imagines. The Compradore is a go-between and always a Chinaman. There is a society of Compradores, which is one of the wealthiest societies in China.

The Chinese in the interior do not take much of a variety of American products as yet, although in the aggregate the business is large.

Inland and Coastwise Transportation.

The country has excellent facilities for water transportation by means of rivers, canals, &c., there being lines of steamboats on the rivers and up and down the coast.

Russia's Increasing Influence.

Russia has practically annexed a large portion of Manchuria, and is fast Russianizing the country. So long as they do not put a discriminating tariff on goods this occupation is greatly to the advantage of American manufacturers and will increase the demand for American goods.

The English Opening New Treaty Ports.

The opening of new treaty ports now being done by England deserves the heartiest co-operation of Americans. By treaty ports is understood places where the Chinese Government has granted to foreign governments the privilege of trading with the natives and engaging in all kinds of commerce, at the same time giving them definite concessions (for ownership of land, &c.), to be used for building and other purposes and all kinds of municipal administration.

Some Characteristics of Shanghai.

Shanghai is the largest of the ports mentioned, and a most imposing city. Discrimination should be made between the actual demands of natives in the interior and the very considerable quantity of goods sent out for the use of people (largely foreigners) in the treaty ports.

In Shanghai, for instance, there are a number of cotton mills of sufficient capacity to manufacture the bulk of the coarser grades of cotton cloth required in China. There are also large machine shops and shipyards for building river steamers and for general repairs. In the mills, shipyards, &c., English machinery is almost universally used.

Fewer Opportunities in the French Sphere of Influence.

In Indo-China very considerable provinces are under French control, and while a certain volume of American goods is sent there the whole tendency is in favor of discriminating duties, and no large increase of trade can be hoped for in this direction.

Chinese Commercial Character.

The commercial character of the Chinese is in marked contrast to that of the typical Japanese. In Japan no native employee is allowed to handle money as a cashier, Chinamen being employed to fill these positions. According to Chinese custom, which is stronger than law, there being no laws except the laws of villages, the family of any Chinaman holds itself responsible for his good behavior in any position of trust. Various instances can be pointed out where the defalcations of an absconding cashier have been made good by families who have also exerted themselves to catch the culprit and see that justice was administered. The Chinaman is a keen, shrewd man of business, and when his word is once given it can be relied on to a greater extent than that of any other nationality in the East.

C. W. Hackett Hardware Company's Catalogue.

C. W. HACKETT HARDWARE COMPANY, St. Paul, Minn., have issued a large catalogue of 1156 pages, illustrating and describing the lines handled by them. It is the third large edition issued by the company. A picture is given in the front of the book of their establishment on East Fourth street, followed by an alphabetically arranged index of 19 pages. The goods are arranged in departments shown by a department index as follows:

	Pages.
Mechanics' and Edge Tools	1 to 170
Locks, Latches and Builders' Hardware	171 to 452
Farming Tools, Lumbering Tools, &c.	453 to 708
Pocket and Table Cutlery, Razors, &c.	709 to 782
Silver Plated Goods, Clocks, &c.	783 to 816
Sewing Machines, Safes, Wagons, Bicycles, &c	817 to 840
Enameled and Tin Ware, Paints, &c.	841 to 892
Tinners' Trimmings, Tools, &c.	893 to 932
Guns, Ammunition, Sporting Goods, &c.	933 to 1100
Fishing Tackle, Boats, &c.	1101 to 1156

From the foregoing it will be seen that the range of goods is large, covering an extensive variety and including many not shown by the company in former catalogues, which have been recently added to their stock. The book is well printed on a fine quality of paper, is copiously illustrated and substantially bound in leather and cloth The book no doubt will be highly appreciated by the company's customers.

George H. Sargent.

GEORGE H. SARGENT, the subject of this sketch, was unanimously elected president of the Hardware Club of New York at a meeting of the Governors held on Thursday, March 23, succeeding Peter McCartee, who had declined a re-election. Mr. Sargent was the vice-president of the club, having been chosen a governor to fill the vacancy caused by the death of William H. Williams in 1895.

Mr. Sargent has long occupied a conspicuous position in the trade, both on account of the prominence of his firm and his personal character and ability. He has always been identified with the New York house, his brother, Hon. Joseph B. Sargent, supervising the manufacture of Hardware at their extensive works in New Haven, Conn., of which city he was formerly Mayor.

George Henry Sargent comes of sturdy Puritan stock and was born in Leicester, Mass., October 29, 1828. His ancestors were among the founders of the town early in the eighteenth century, the descendants of his progenitors being referred to in the history of Leicester as "most active and zealous of those who were in opposition to the British Parliament, were very public spirited and highly honored citizens and prominent in Massachusetts as American patriots, sharing the glory and fame as brave comrades of the heroes of '76." William Sargent was the forefather of the American branch of the family. He came from Northampton, England, to Charlestown, Mass., in 1638, and became a "freeman" and one of the important men in the colony. He was a "lay preacher," and as Johnson says in his annals of New England, "a Godly Christian." The mingled blood of Pilgrim and Puritan flows in the veins of his descendants.

After a course at Leicester Academy the subject of this sketch entered Harvard College. Among the members of his class, that of '53, were Charles W. Eliot, now president of the university; Professors Peirce, White and Hill, all connected with the university; Edward King, president of the Union Trust Company, New York; Justin Winsor, formerly librarian of Harvard, and many others who have been prominent in business and professional life.

On leaving college in 1853 Mr. Sargent came to New York and entered the Hardware trade, occupying modest quarters in the third loft at 24 Cliff street, moving thence to 85 Beekman street the following year, where in 1856 the present efficient heads of departments, Thomas J. Atkins and William J. Ladd, and in 1860 George Munson, entered the employ of the house. In 1863 they moved to 70 Beekman street, where they remained until 1875, when they entered upon larger quarters at 37 Chambers street. In 1879 the adjoining building, No. 35, was leased and in 1890 No. 33 was added. Condemnation proceedings by the city of their buildings, with many others, to secure a suitable site for the new Hall of Records, caused them to move a few blocks further uptown to a fine and comparatively new building, 149-153 Leonard street, near Centre, where they are now located.

The immense works at New Haven, Conn., were established in 1863, moving there from New Britain, Conn., where for some time goods were manufactured in the building formerly used by Peck & Walter Company, of which company Sargent & Co. were an outgrowth, the removal being necessary in order to get more room than was available in New Britain, and thus this notable manufacturing city lost a house which has since taken its place as one of the largest manufacturing concerns in the country and in the world.

For a long time the two brothers, with Edward Sargent, another brother, manufactured hand cards for carding cotton and wool at their factory in Leicester, a business inherited from their father. In this industry a great deal of money was made during the Civil War, which led to the observation that it was like borrowing money that need not be returned.

Mr. Sargent is endowed by nature with a robust physique and an impressive and dignified bearing, rendering him a conspicuous figure in any assembly. He has a vigorous intellect which has been developed by education, earnest application to business and association with men of culture and of affairs. His opinions on questions relating to commercial matters are regarded as especially sound, resulting from his foresight, balanced and discriminating judgment, and the broad and comprehensive views taken of the subject under consideration. With exceptional financial ability and fidelity to any responsibilities assumed, he has an enviable reputation for sterling honesty and integrity. The fact that he is a good judge of character is also referred to as one of the characteristics which have contributed not a little to the pronounced success of his business career.

While in recent years he has ceased to give as much attention as formerly to details, he is attentive to busi-

ness, keeping an observant eye on what is going on in the store, is very democratic in manner and can be approached without formality. He has a bluff, breezy way but withal a kind, genial manner that wins respect and makes friends.

For years Mr. Sargent has been almost invariably at the office on business days and holidays. It is narrated of him that once seeking to rid himself of an advertising man he finally promised an advertisement on a certain morning, knowing it to be a holiday; but his tormentor took him at his word, was promptly on hand, and contract was given as agreed.

Mr. Sargent used to make it a rule to scrutinize carefully the regular monthly statements before they were sent out, and as occasion required he would often supplement them with a terse, pungent foot note, or if necessary a letter suggesting that the account was somewhat ancient and should be settled. The tact, originality, wit and wisdom of his correspondence in connection with this department of the business are well known and might be illustrated by many examples. Once looking over an unusually long statement, somewhat overdue, he wrote below, "Billy, come down," and not in vain. A letter addressed to an excellent firm in a neighboring city excited the ire of the recipient, who contemplated a reply in the same vein, but was dissuaded by one of his partners, who dryly remarked, "Don't answer it; if you do you will get another." Mr. Sargent certainly has the faculty of uttering trite and striking sayings in a genial, jocose way, that, read between the lines, usually accomplish what is desired.

Mr. Sargent, while frugal in personal affairs, has the reputation of being broad and generous in business matters, notwithstanding his remark once made in his office, "It takes a brute to sit right here and keep expenses down." He once handed an expense account back to a traveling man with the injunction to revise it. The salesman replied that the only revision possible would be to charge it to his personal account, whereupon he signed it at once. In view of his personal characteristics he is referred to by some who have known him long and well as one of the most popular of the prominent Hardware merchants of the country.

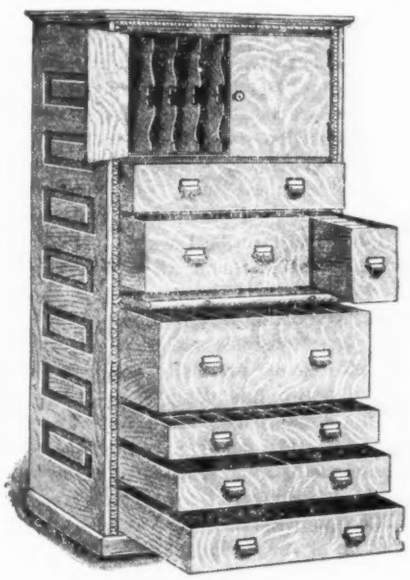
Instances of his liberality and kindness are not far to seek. A gentleman about his own age who had long dealt with him became involved in serious financial difficulties during the depression following 1893, and found in Mr. Sargent a warm friend. Speaking of it recently he said that he could not have received better treatment if Mr. Sargent had been his brother or father, being given more consideration than he would have asked or expected.

Besides being a member of the Hardware Club he has long belonged to the Union League Club and the University Club, is a director of the Mercantile National Bank, and in January last was elected a member of the Chamber of Commerce, indicating the prominent place he occupies among the business men of the city. As a representative Hardware merchant and in view of his position and character, there is evident propriety in his selection as president of the Hardware Club.

The Leonard Catalogue Cabinet.

A CONVENIENT method of storing and classifying catalogues, circulars, postal cards, &c., which every wide awake and enterprising concern are supposed to preserve for ready reference, is accomplished by means of the Leonard Catalogue Cabinet, illustrated in the accompanying engraving. This Cabinet, which is being introduced by the Leonard Mfg. Company of Grand Rapids, Mich., is made of solid oak, with quarter sawed front, highly polished. It is 32 inches wide, 24 inches deep and 63 inches high, outside measurements, mounted on strong ball bearing centers. The upper cupboard is divided into nine compartments, each 3 inches wide by 13½ inches high, extending back the entire depth of the case. The upper drawer is divided into 18 compartments, each 9¾ inches long by 4½ inches deep. These compartments are intended for odd sized catalogues ranging between the envelope and the standard 6 x 9 size. The second drawer contains 12 compartments, each 9¾ inches long by 7½ inches deep, these being intended for standard 6 x 9 books. The smaller drawer shown at the right in the engraving is intended for the card indexes. Just below these two drawers is a sliding shelf which can be used as a work table. The large drawer below the shelf contains nine compartments, each 19½ inches long by 9½ inches deep, these being intended for catalogues of about 9 x 12 inches standing on edge, and also for standard 6 x 9 catalogues standing on end. The next drawer below contains 27 compartments, each 6½ inches long by 3½ inches deep, these being intended for small size envelope catalogues, circulars folded to fit the spaces, postal cards, &c. The drawer next to the bottom one contains two compartments, each 19½ inches long by 13 inches wide, which are intended for catalogues lying flat. The bottom drawer has no compartment, it being intended for the very largest catalogues lying flat. Each bin is numbered, and the numbers on the drawer pulls include the numbers on the bins.

In the system of classification employed the books, catalogues and circulars are placed in the cabinet according to size. When this has been done each book or package is taken out and marked with the number of the bin in which it is placed. As each book or package is marked, the firm name, address and number on the book are written on an index card, the card being placed in



The Leonard Catalogue Cabinet.

the index drawer, and this method continued until the contents of all the compartments have been indexed. Several names may be written on each card, provided they come within the alphabetical classification of the index. When this work has been done it will be easy to find any catalogue desired, provided the name of the firm making the article is recalled. If this is not the case it can be found by means of the cross index. This is a second card index arranged just behind the first, the cards being headed with the name of the article. The name and address of every firm making the particular article, so far as known, are written on this card, also the number of the bin in which each catalogue is kept. This cross index will be found valuable when it is desired to send out inquiries for new prices on any article, and it will also give at a glance the addresses of all makers so far as known of that particular article.

Combined with the Leonard Cabinet is the Leonard system for buyers, by means of which cost price cards furnish a complete system for buying goods at lowest prices. They are made the size of a large memorandum book, say 5½ x 7 inches, in order that they may be readily slipped in the pocket. The first column of the cost card should have the general name of the article written at the top, while on the body of the card are written the different kinds, these being classified according to individual ideas Other columns carry the addresses of concerns making the articles, date of quotation, time allowed, cash discount and freight allowance. It is not intended to put list prices on the cards, but the net price at which the goods are offered. If desired, the last column can be taken for a retail price, and the next to the last for a wholesale price. The company claim that the great advantage of this card system is that it permits an accurate comparison of prices.

Russell & Erwin Mfg. Co.'s Catalogue.

RUSSELL & ERWIN MFG. COMPANY, New Britain, Conn., and 45 Chambers street, New York, announce the publication of their new complete catalogue for 1899, Volume 9. This forms a book of over 1000 pages, bound in dark red cloth with olive edges and artistically stamped in gold.

The general arrangement of the catalogue does not depart widely from that with which this company's customers have long been familiar, being practically the same as that followed in their last catalogue. In fullness and conciseness of description, however, it is far in advance of that publication; and is perhaps unequaled in this respect by any Builders' Hardware catalogue now in the hands of the trade. Information is given in tabular form whenever possible, and covers even such points as the size of lock fronts and distance from center of hubs to keyholes, dimensions not ordinarily given. Case quantities and weights are specified upon all such goods as are sold in large quantities.

In that portion of the book covering Locks, the Russwin Pin Tumbler Lock is for the first time fully presented, and upon pages 40 and 41 the construction and possibilities of both types of Cylinder Locks made by Russell & Erwin Mfg. Company are briefly and clearly set forth. Master Keyed Locks are given a section by themselves (pp. 62 to 69), prefaced by a page of reference to such other Locks as are classified under various types, but which may be fitted with master-keys if it be so desired. Upon the pages where these Locks are illustrated their possibilities as Master Keyed Locks are given in foot notes.

Pages 120 to 155 describe Lock Sets, from rim sets to front door and vestibule sets, all designated by number with the exception of sliding door sets. Sets with design goods are shown in the next section of the book, which covers the cheaper designs, such as dealers are likely to carry in stock. These are fully illustrated with wood cuts, and the entire line comprised in one design described upon a single page. Here, as in the Fine Goods Supplement mentioned below, a radical change has been made in the mode of numbering, tending to simplify the whole system of numbers. Like goods are now designated by like numbers, and these numbers made specific by the addition of the design name. This is no new device, but is now for the first time employed by this company and is a great improvement over the bewildering multiplication of numbers which grew out of the gradual increase of their design goods. A comparative list of old and new numbers is issued for use until the trade has become familiar with the new system.

In the Butt section of the catalogue case quantities are given upon all those sizes of the cheaper goods which are bought in quantity, and upon the finer Bronze Butts the weight per pair is specified. The pages devoted to Store Door Handles cover the entire line of these goods, even including those which are identified with design goods of the very highest quality and cost. To mark the distinction between these and stock patterns they have been illustrated with gelatine prints of exquisite workmanship, made directly from the goods themselves. Here, again, the same revision of the numbering system has been made that was referred to as affecting design goods.

The miscellaneous goods which follow Store Door Handles are arranged much as in previous catalogues, allowing for the many omissions and additions which have been made since the last catalogue was issued. Finish No. 3 (black background, light polished bronze relief) has been made standard for ornamental bronze and bronze plated goods; finish No. 11 (polished bronze, natural color) for plain goods. Wherever there is chance for misunderstanding, statement is made that the goods are either cast or wrought metal as the fact may be.

In Padlocks are shown the extended line of standard types which this firm have long manufactured and, in addition, the wrought metal Padlocks which have more recently been put upon the market. Hinge Pins and Kuhn's Stove Door Pins, goods which have been made for some years, but not hitherto illustrated, are shown in the Screw section, which has been compiled with the twin purpose of fully illustrating the goods and giving price-lists, which are boldly and distinctly printed. A page at the head of this section shows a large number of special Screws for which there is more or less constant demand.

That portion of the catalogue beginning with page 517 is devoted to the large line of jobbing goods dealt in by Russell & Erwin Mfg. Company, for some of which, like Swan's Mechanics' Tools, they have the exclusive agency.

An exhaustive general index and a numerical index of all the goods of the company's own manufacture complete a catalogue notable for clearness and comprehensiveness, and which, in its printing and binding, shows great care and skill.

As an appendix to the catalogue there is issued a Fine Goods Supplement, which, although complete in itself, may be bound up with the catalogue proper. In this are illustrated, by means of gelatine prints exclusively, the many designs of fine bronze Hardware which this firm have developed in the last few years, as well as their Glass Knobs. The more recent designs especially show a strict adherence to architectural forms and motives which brings them into perfect harmony with the style of the buildings for which they are intended. The gelatine process reproduces the goods with all the fidelity of a photograph and the delicacy of a wash drawing. Every left hand page illustrates a number of articles of a single design; and upon the opposite page are described all the pieces made in that design. Each design is made the subject of a short treatise, giving the features of the school to which it belongs, the relation of that school to others which succeeded it, and, in some cases, the motive which inspired the design. There is just enough of a connection between these treatises to make them a short history of art, exemplified in Hardware, and to carry the interest forward from one page to the next. This is an altogether novel feature in a work of this kind.

Reference is made at the base of each page to the finishes in which the goods will be furnished, and suggestions made as to finishes which are most appropriate for the various designs.

The Fine Goods Supplement is one of the most artistic works yet issued to the Hardware trade; combined with Catalogue Volume 9, it gives all the goods dealt in by Russell & Erwin Mfg. Company in remarkably compact and convenient form, considering the number and variety of these goods.

Catalogues may be obtained through any of Russell & Erwin Mfg. Company's warehouses in New York, Philadelphia, Baltimore and London, from their factories in New Britain or Dayton, Ohio, or from their sample offices in Chicago or Boston, the last but recently opened at 814 State street, Exchange Building.

A Tin Cycler.

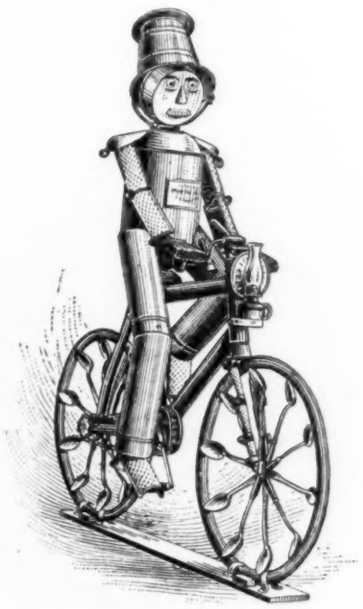
THAT an attractive window display will pay a better profit on the time and money expended in producing it than anything of a similar cost to which a merchant can turn his attention has been the experience of William Dunsmore, Oxford, Nova Scotia, who has sent us a photograph of an attraction which he placed in his window a short time since and which we reproduce in the illustration herewith.

It consists of a tin cycler which was put together by Mr. Dunmore's son Archie, and is made up of different articles carried in stock.

The frame of the Bicycle was made of Conductor Tubing, Buck Saw Frame, Barn Door Hinges and Nutmeg Graters. The hook of the Hinge served as a step.

The wheels were made of Lead Pipe with Basting Spoons for spokes; the sprockets of Star Patty Pans and small Pie Plates with Basting Spoons for cranks and pedals. A Trace was used for a chain and a Tape Measure serves for a cyclometer. The head of the frame holds a Monkey Wrench grasping a Brace for a handle bar. A Shot Pouch is used for a tool bag, a Team Bell hangs on the handle bar for an alarm, and a small Reflector Lamp is used for a light.

The body of the cycler is a 5-gallon Oil Can having legs of Hot Air Pipe and arms made of Potato Graters; Tin Scoops form the shoulders and Whitewash Brushes form the hands. The feet are made of Potato Graters, with Funnels for heels. The head is a deep Pudding Pan, with Pan Feet for eyes, a Coffee Pot Spout for



A Tin Cycler.

nose and half an oblong Patty Pan for a mouth. The Dog Collar at the throat and the large Chamber Pail for a high hat give the finishing touches to the gentleman.

Enameled Ware Litigation.

IN the suit brought by Lalance & Grosjean Mfg. Company, New York, and St. Louis Stamping Company, St. Louis, Mo., against the Haberman Mfg. Company and Matthai, Ingram & Co., Judge Lacombe of the United States Circuit Court has decided that the court does not lose jurisdiction by reason of subsequent events, and will hold the causes until final disposition upon accounting for damages and profits. He also holds that the execution of assignment and release by one of the joint owners (St. Louis Stamping Company) does not destroy the co-owners' (Lalance & Grosjean Mfg. Company) right to recover damages from the defendants. The matter of making the St. Louis Stamping Company defendants with the Haberman Mfg. Company and Matthai, Ingram & Co., is for the present held in abeyance, but the Court says should they (St. Louis Stamping Company) undertake to delay, harass or impede the orderly progress of the cause the motion can be renewed.

The former solicitors for the complainant, who withdrew as attorneys for Lalance & Grosjean Mfg. Company and accepted a retainer from the St. Louis Stamping Company, have surrendered and filed all the papers, exhibits, &c., relating to these causes with the court clerk, who for the prosecution of the suits will transfer them for the time being to the custody of Lalance & Grosjean Mfg. Company's attorneys.

Requests for Catalogues, Quotations, &c.

A. F. WIXSON, who has covered the Lake Superior territory for Fletcher Hardware Company, Detroit, Mich., has purchased the stock of Burgan Hardware Company, Laurium, Mich. Mr. Wixson takes possession about April 1 and solicits catalogues from manufacturers and jobbers of general Hardware. The new firm will be known as the Laurium Hardware Company.

Frank B. Hoole is opening a Hardware store in East Aurora, Erie County, N. Y., and is desirous of receiving manufacturers' and jobbers' latest catalogues and price-lists.

E. T. Martin Hardware Company will open up a general Hardware store at St. Mary's, W. Va., about April 15 and desire catalogues and prices on Hardware, Tinware, Sporting Goods, Stoves, Farm Implements such as Wagons, Plows, Harvesting Machinery, &c.

Price-Lists, Circulars, &c.

THE CLYDE CUTLERY COMPANY, successors to the Hunter Tool Company, Clyde, Ohio: Cutlery and Hardware Specialties.

THE STOWELL MFG. & FOUNDRY COMPANY, South Milwaukee, Wis.: Catalogue of Door Hangers, Wire Workers' Goods, Hot Air Registers, Furnace Goods, Grindstone Hangers, &c. Also catalogue of Railroad Door Hangers, Barn and House Door Hangers, Rail, &c. The company also issue special catalogues, six in number, devoted to particular lines, such as Registers, Wire Workers' Goods, Malleable Hardware, Hangers, &c.

BLAIR HUSKING GLOVE COMPANY, Bucyrus, Ohio: Husking Gloves, Pins and Mittens.

THE HENDEE WIRE BRUSH COMPANY, Milwaukee, Wis.: Catalogue and price-list of Wire Brushes and Wire Brooms, Badger brand Belt Filling and Hardware Specialties.

W. C. HELLER & Co., Montclair, N. J.: Steel Hardware Shelf Boxes, Screw Cases, Mail Boxes, Riding Harrow, Ripping Plow, &c.

EDW. K. TRYON, JR., & Co., Philadelphia, Pa.: Eighty-eight page catalogue showing a large line of Fishing Tackle.

THE MARKHAM AIR RIFLE COMPANY, Plymouth, Mich., issue for the use of the retail trade a neat booklet devoted to their Air Guns.

PERCY G. JAMES, who for some years has occupied a responsible position in the house of Hartley & Graham, New York, has bought the business of Martin S. Rapelye, Jamaica, L. I., and expects to take possession April 4. This is an old established stand on Fulton street, one block east of the town hall, and was bought 12 years ago by Mr. Rapelye from his grandfather. The stock consists of Hardware, Paints, Oil, Glass, &c. It was Mr. Rapelye's invariable custom to take advantage of all cash discounts in making purchases, and Mr. James will continue the same custom.

J. E. Reynolds & Co. and Reynolds Bros., Manson, Iowa, have consolidated their interests under the former style. They are occupying a new store, 25 x 100 feet, two stories and basement. The establishment is equipped with the Warren fixtures. They also have an Implement house, 45 x 100 feet.

S. W. Woodbury, dealer in Hardware, Iron and Steel, Mill Supplies, Farm Implements, &c., Northampton, Mass., has leased a store in the new Masonic Block, two doors below his present establishment. The new store is being stocked with fresh goods and up to date fixtures.

The Pacific Hardware Company have succeeded Castle & Cooke, at Honolulu, H. I., in the wholesale and retail Hardware, Implement and Sporting Goods business.

J. C. Richards is successor to Richards & Williams, at Farmer City, Ill.

F. M. Crow is now conducting the Hardware and Implement business formerly carried on under the style of C. P. Crow & Co., Lane, Kan.

Trade Items.

THE GOODELL-PRATT COMPANY is now the name of the firm formerly known as Goodell Brothers Company, Greenfield, Mass., well known as manufacturers of Mechanics' Tools. They advise us that the officers, directors, management and location remain the same as formerly.

ROCKFORD BIT COMPANY, Kokomo, Ind., advise us that they sold more goods during 1898 than in any year since they were established, each month being a record breaker as to sales. Notwithstanding that during the fall and winter their new buildings were completed and new machinery installed, thus largely increasing the capacity of their works, they state that they were early this year obliged to withdraw all quotations, owing to the large number of orders entered, and they are finding it difficult to keep their regular customers supplied with sufficient goods to meet regular demands. The company employ no traveling salesmen, the business largely coming through the mails from houses throughout the United States and Canada.

H. M. PUTNAM, formerly connected with the Simonds Rolling Machine Company and later with the Fitchburg Steel Ball Company, has accepted a position with the Iver Johnson's Arms & Cycle Works of Fitchburg, Mass.

THE SMITH & HEMENWAY COMPANY, 20 Warren street, New York, on or about May 1 will move from their present address to 296 Broadway.

J. E. SMITH, third vice-president of the Simmons Hardware Company, St. Louis, Mo., is on a visit of two or three months to Honolulu, in the Hawaiian Islands. Mr. Smith is accompanied by his family.

MALTBY-HENLEY COMPANY, 20 Warren street, New York, who have recently sold out all that pertains to the Hardware branch of their business to the Smith & Hemenway Company, will on or about May 1 remove to 3 Maiden lane, where they will continue their Silver Plated Hollow and Flat Ware business.

THE ONEIDA COMMUNITY, LIMITED, Niagara Falls, N. Y., have purchased the Weldless Chain business of the Garland Chain Company, Rankin Station, Pa., and are removing the machinery to their own plant, which is located on the lands of the Niagara Falls Hydraulic Power & Mfg. Company. The Garland Chain Company will continue manufacturing Common or Welded Chain, as well as Galvanized Pump Chain, and have lately increased their capacity in these lines.

Among the Hardware Trade.

The Tyler Hardware Company, James R. Adams, proprietor, to whose purchase of the wholesale and retail business of the Caspary Hardware Company extended reference was made in our last issue, are located at Tyler, Texas.

W. G. Clark is successor to Clark & Mardis in the retail Hardware business at Corydon, Iowa.

Harry Hankins Hardware Company have succeeded Hankins & Dillard, at Monticello, Ark.

H. J. Winans & Co. have succeeded Frank H. Burr in the Hardware business at Rochester, Mich.

The Hardware firm of Kokernot & Wells, Gonzales, Texas, have dissolved partnership. W. H. Kokernot will continue at the old stand.

Roberts & Nesbitt have purchased a stock of Hardware at Constantine, Mich.

F. Dement & Co., Astoria, Ore., have lately moved into more commodious quarters.

Jordan Hardware Company are successors to C. A. Schrandt in the Hardware and Harness business at Gordon, Neb.

L. A. Doane is now carrying on the business at De Graff, Ohio, formerly conducted by Doane & Pegan.

The store of Horace Beach, at Prairie du Chien, Wis., was burned out a few weeks since. Mr. Beach is rebuilding.

D. M. Simonson is successor to Frank McGovney, dealer in Hardware, Stoves and Implements, Milo, Mo. Mr. Simonson is adding another story to his building.

The Canada Hardware Company, Limited, Montreal, Quebec, have been incorporated with a capital of $50,000. They will conduct a strictly wholesale business in Shelf and Heavy Hardware, Bicyles and Sporting Goods.

F. L. Anderson has succeeded Jas. P. Clagg & Son, at Webster City, Iowa.

M. F. Porter has lately embarked in the Agricultural Machinery business at Kaufman, Texas.

B. T. Meehan has succeeded F. H. Small & Co., at Tiskilwa, Ill.

Tupper & Odden, Osage, Iowa, will soon move into a new store more convenient and commodious than the present quarters.

The Gardner-Warner Hardware Company, Minneapolis, Minn., whose store was damaged in a recent fire in the Boston Block, have made the necessary repairs, and the firm are now in as good shape as ever.

Ackland & Siblerud have commenced business at Hartland, Minn., handling a line comprising Shelf and Heavy Hardware, Stoves and Tinware, Agricultural Implements, Sporting Goods, &c.

J. G. Wright is successor to Wright & McKay, at Wilcox, Neb.

Jones & Watson have succeeded Keen & Co., at Elkhart, Ind. The new firm have materially increased their stock, and are intending to install new fixtures, &c., for the accommodation and display of goods.

The stock of goods of the D. C. Brown Company, Brandon, Vt., will be closed out, and their business consolidated with the old firm of F. R. Button, which was established in 1827.

Ahrenbeck & Terrell are successors to E. L. Ahrenbeck, at Navasota, Texas.

The Vancouver Hardware Company have moved into their new building at Vancouver, B. C. The structure is five stories high, and is equipped with modern fittings throughout. The company do a wholesale and retail business, and their travelers cover the whole province from Atlin to Crow's Nest Pass. They have a branch house at Nelson to handle Kookenay trade.

C. H. Reinholdt, Manning, Iowa, has completed a new Hardware store. The building is 75 x 90 feet in dimensions and of brick. Mr. Reinholdt refers to the business of the past year as exceeding even the prosperous year of 1892, and states that the prospect for the present year is better than any during his 11 years' experience in the Hardware line.

G. W. Bloodgood & Co., Wyandotte, Mich., have disposed of their business to Fowler & Hastings, who are continuing at the old stand. The Messrs. Bloodgood are intending to engage in business at another point not yet determined.

William Rancier has succeeded Polk & Co., at Killeen, Texas.

Wentworth, Anis & Co. have succeeded Wentworth & Wilson at Smith Center, Kan. The new firm have built a 30-foot addition to the store.

J. M. Moss & Co., Cainesville, Mo., have added a line of general merchandise to their Hardware stock. Some improvements have also been made in their establishment, which has been thoroughly overhauled. The shelving now runs to the ceiling, rolling ladders being employed.

Wastell Bros. have opened up in business at Columbia, B. C., handling Stoves and Tinware in addition to a line of Shelf Hardware.

The Merritt Hardware Company have succeeded the Southern Hardware Company, at Macon, Ga., wholesalers and retailers of Hardware, Stoves and Tinware, Implements, Sporting Goods, &c.

True & Blanchard Company, Hardware merchants, Newport, Vt., are also interested in the sale of pure Vermont maple sugar and syrup. Situated as they are in one of the best sugar making districts in the State they refer to their ability to supply strictly pure high grade goods at very reasonable prices. They are soliciting private or family orders as well as those for larger quantities.

Poppe & Klahn, Oxford Junction, Iowa, have dissolved partnership. D. W. T. Poppe will continue the Hardware part of the business, and Mr. Klahn the Implement and Lumber part.

J. C. Button, Merrill, Iowa, has sold out to Schindel & Berner.

Toat & Ashbrook, Spickard, Mo., have been succeeded by Wm. M. Ashbrook.

Chas. E. Watson is now carrying on the business at Hemple, Mo., formerly conducted by Devilbiss & Watson.

D. E. Shrauger has succeeded Shrauger & Hansen, at Exira, Iowa.

Hardman & Stands, Lafontaine, Ind., have dissolved. R. D. Hardman is successor.

H. M. Sherwood & Son have purchased the Terrell Hardware stock at Linton, Ind.

Victor J. Bulliett has succeeded Long & Bro., at Corydon, Ind.

De Long & Freed have opened a new Hardware and Implement store at American Fork, Utah.

O. J. Heng has been admitted to partnership in the business of Louis D. Smith, Havelock, Iowa, and the firm style is now Smith & Heng.

Robert McIntyre has succeeded H. McIntyre & Son in the Hardware business at Bellflower, Ill.

Tarver, Henslee Company have succeeded Tarver & Henslee, at Rodebud, Texas. The company are intending to build a new store during the coming summer. Its dimensions will be 60 x 120 feet.

The J. A. Tappin Hardware Company, Helena, Ark., have been incorporated with a capital of $25,000. The company are successors to J. A. Tappin in the wholesale and retail business.

W. Marvel has succeeded Marvel & Berryhill in the Agricultural Implement business at Gresham, Neb.

Hubbell & Keeler have bought the stock of W. H. Smith & Co., Norwalk, Conn. They have also purchased the business of the South Norwalk Hardware Company, South Norwalk, and removed the stock to Norwalk.

Barker & Belden, Pittsfield, Mass., have dissolved. Mr. Barker's interest in the firm has been purchased by Wm. S. Smith, formerly in business at South Norwalk, Conn., and the style has become the Hardware Supply Company, William S. Smith and Frederick G. Belden being proprietors.

I. C. N. Cottrell has bought the interest of E. A. Fradenburgh in the Hardware firm of Cottrell & Fradenburgh, Faribault, Minn., and will again continue the business under his own name.

M. R. O'Neill, who is well known to the Minnesota trade, has disposed of his business at Graceville to R. A. Costello of Duluth, who has had many years' experience in this line.

The corporate name of the Wm. Frankfurth Company, Milwaukee, Wis., has been changed to Peter Paulus Hardware Company. The primary reason for the change was the similarity of the name to that of the Wm. Frankfurth Hardware Company of the same city, causing annoyance to both companies. Mr. Paulus has been president of the company since their incorporation, and his name has accordingly been substituted for that of Wm. Frankfurth, one of the former proprietors. The ownership and management of the concern continue unchanged.

J. B. Collins has bought out W. D. Craig's Hardware and Implement business at Gayville, S. Dak.

Davidson & Co., Weston, W. Va., have been succeeded by Bailey & Koblegard.

W. A. Polk & Son, Oaktown, Ind., have admitted a partner, W. E. Walker, and the style has been changed to W. A. Polk & Co.

J. H. Rees & Co. have purchased the stock of Eimer Hardware Company at Costello, Pa., and will continue at the same stand adding Harness to lines formerly carried.

The Columbus Rubber & Belting Company, Columbus, Ohio, realizing that this style does not adequately describe the varied and extensive lines of Mill and Mine Supplies they are now handling, and for the purpose of having a more appropriate style, have changed the name of the corporation to the Columbus Mill & Mine Supply Company.

Young & Young, Newmarket, N. H., have recently moved to larger and more commodious quarters. They now occupy two floors 120 x 25 feet in dimensions and have added materially to their former stock. They are dealers in Agricultural Implements and Stoves as well as Shelf and Heavy Hardware.

Miscellaneous Notes.

Patent Extension Gas Fixture.

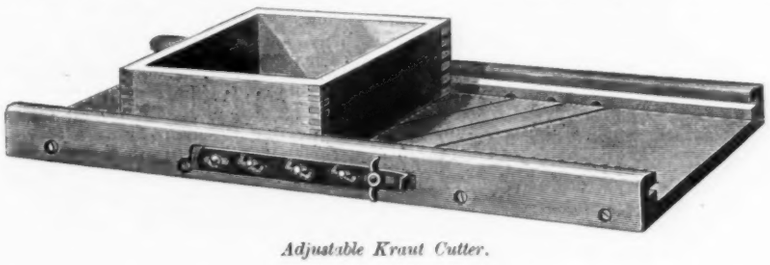
Edward Milier & Co., Meriden, Conn., and 28-30 West Broadway, New York, have just put on the market a No. 50 patent extension gas fixture. It is ready for service as soon as connected with the gas pipe, and can be used either up out of the way or drawn down for sewing or reading purposes. Closed it is 29 inches long and is 57 inches extended. It has a ⅜-inch regular gas nipple, takes a 10-inch dome shade and is made of brass, polished finish. Concealed by the brass canopy at the top is a mechanism for raising or lowering by the use of side chains the lower or burner portion. Gas is conducted between the two sections by a flexible rubber tube, which is always kept in spiral form by a shaped wire extending the length of the tube inside of it. The rubber tube can be removed and renewed readily if necessary. The gas supply is controlled by a shut off cock placed immediately under the canopy and operated by the chains attached to the arms of the cock. This arrangement relieves the flexible tube of any pressure when the fixture is not in use. While adapted for any gas burner, it is especially designed for incandescent lights in connection with Welsbach or other mantles.

Bathroom Fixtures.

Meriden Bronze Company, 30 Park place, New York, and Meriden, Conn., manufacturers of lamps, gas portables and art goods, have recently brought out a large line of high grade bathroom fixtures in polished nickel on cast and wrought brass, according to the character of the fitting. In many of the kinds there are a number of styles and sizes. The assortment consists of towel racks, robe hooks, towel rings, soap dishes, tumbler holders, tooth brush and powder holders, sponge holders, combination holders for sponge and soap, toilet paper holders, towel shelves, &c.

Adjustable Kraut Cutter.

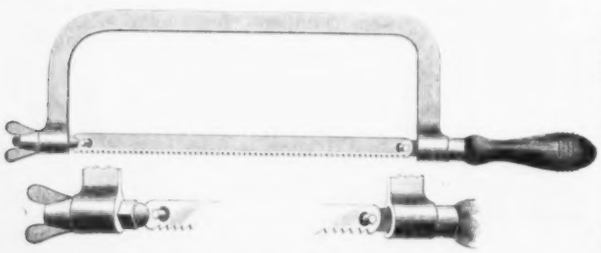
The illustration herewith shown is of a kraut cutter put on the market by Henry Disston & Sons, Philadelphia, Pa. The adjustment of the hight of the cutting blades is effected by pulling the sliding lever at the side of the cutter. It is referred to as being made of seasoned cherry lumber, with knives of best cast steel.



Adjustable Kraut Cutter.

Adjustable Hack Saw Frame.

The accompanying cut relates to an adjustable hack saw frame offered by Henry Disston & Sons, Philadelphia,



Adjustable Hack Saw Frame.

Pa. The frame is adjustable for blades from 6 to 12 inches in length and is referred to as well and strongly made.

The Bayer Thuroscope.

Bayer & Co., 19 North Juniper street, Philadelphia, are offering the thuroscope, or window mirror, shown in the accompanying cuts. Fig. 1 shows the part facing the street, where it is fastened to the window sill by the

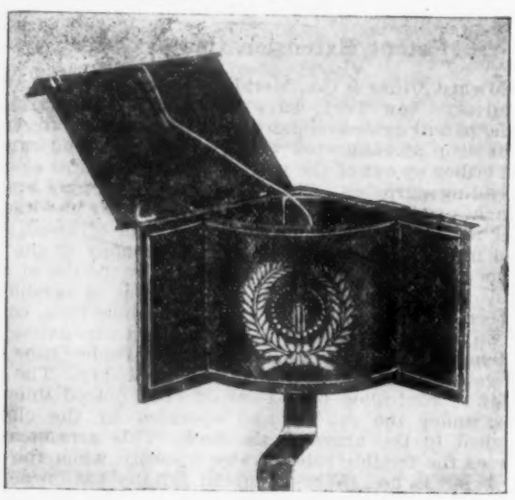


Fig. 1.—The Bayer Thuroscope.

upright cleat, as shown, extending below the thuroscope. Fig. 2 represents it as it appears from the interior of the room, the two mirrors, placed at an adverse angle of 45 degrees, showing two sides of the street in both directions, it is stated, from six to eight blocks, with a third

Fig. 2.—The View of the Street.

glass at an angle on top enabling those within to observe any one on the front door step without raising the window or being seen. It is pointed out that the device can be used with equally good results at any window, second, third or fourth floor, that it presents an ever changing panorama and that it is not only useful to the housekeeper, but that it relieves the monotony of indoor life for the invalid.

A joint stock company under the style of the Sistersville Hardware Company have been organized at Sistersville, W. Va., and the stocks and good will of the following firms purchased: Berry & Colbert, W. G. Gorham and Smith & Boeshar. The new company will have a capital stock of $100,000. The incorporators are F. M. Berry, F. J. Colbert, E. A. Durham, R. McCormick, Geo. E. Work and F. D. McCoy.

Crescent Acetylene Gas Lamp.

Hermann Boker & Co., 101-103 Duane street, New York, are marketing the Crescent acetylene gas lamp for cycle and carriage use, as illustrated herewith. It is

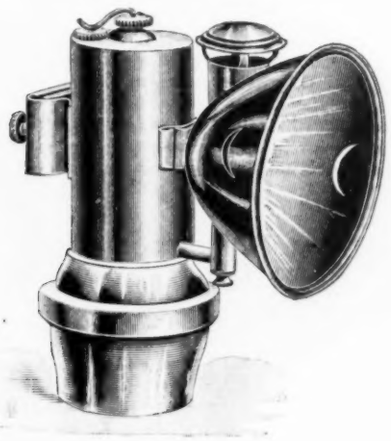

Fig. 1.—Crescent Acetylene Gas Lamp.

spoken of as light, small and attractively designed, weighing 10 ounces and being 5½ inches high. It is made of 24-gauge brass, nickel finished, and has a capacity of six hours' burning. Attention is drawn to the facility with which carbide residuum is removed by pulling out a false bottom. The water is fed in well regulated drops and the supply controlled by the valve D, and by means of the perforated tube allowed to come in contact with the carbide, not only at the bottom, but on the sides, thus delivering the water at several points at once, causing, it is said, a very steady flame through the even chemical action. Fig. 2 is a sectional view showing the construction of the lamp. The water tank A is filled through the opening B. The water valve D regulates and controls the water, the pointer E indicating the amount of water fed. C is a receptacle for the

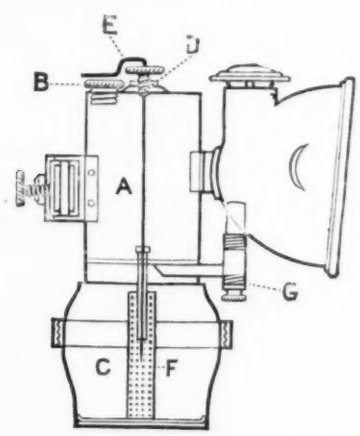

Fig. 2.—Sectional View of Lamp.

carbide and F a perforated tube to keep the carbide out. If the burner needs cleaning a bicycle pump can be screwed into the opening G, which is threaded to fit standard nipples.

Lewis Quick Acting Vises.

Lewis Tool Company, 44 Barclay street, New York, have just brought out the Lewis rapid transit or quick acting vises, here illustrated, in both swivel and plain bottoms. The main characteristics emphasized by the manufacturers are efficiency and pronounced simplicity, with but one more piece than in regular screw vises, they claiming for it the same positive action, durability, tenacity and power of screw vises. In use the movable jaw can be placed against the work in a moment, whatever its position, when with less than a complete turn of the handle material can be rigidly gripped, the jaws beginning to gather on the object as soon as the handle turns, gathering in all on an average vise about ⅝ inch. Fig. 1 is a sectional view showing the working parts, Fig. 2 illustrating the threaded cylinder, with a longitudinal section cut away, together with the rack above the cylinder, with which the teeth, pointed at the ends, engage instantly when the lever is turned. It will be seen that the portion of the cylinder from which the threads have been removed permits the outer jaw to move back and forth freely when the lever is reversed.

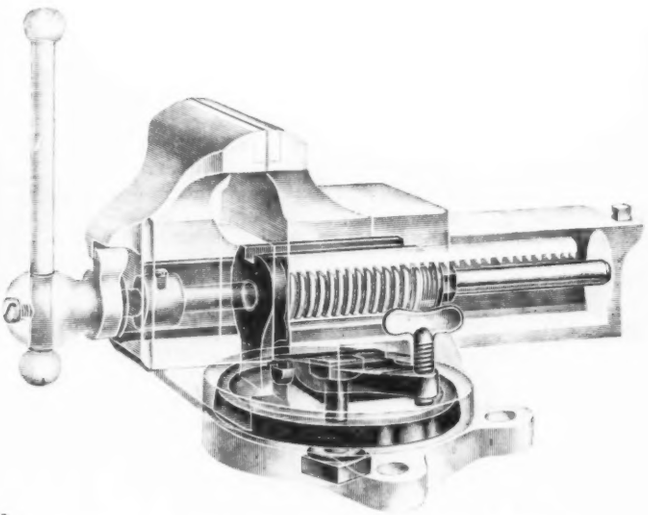

Fig. 1.—Sectional View of Lewis Swivel Quick Acting Vise.

The handle turns a shaft which is keyed to the inner side of the threaded cylinder referred to. It is also pointed out that the teeth, having very long bearing sur-

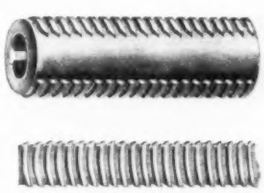

Fig. 2.—Section of Toothed Cylinder and Rack.

faces, cannot slip or easily get out of order. No springs are used in the vise. Figs. 1 and 3 illustrate the swivel

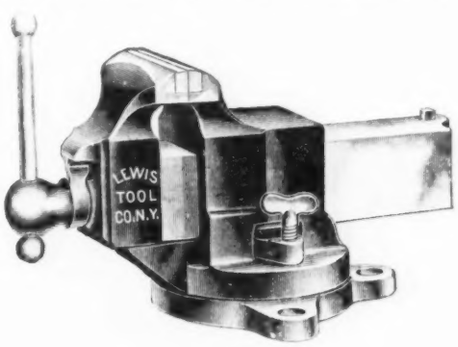

Fig. 3.—Lewis Swivel Quick Acting Vise.

vise, which can be instantly swung to any desired position on the machine finished cone of the base and by

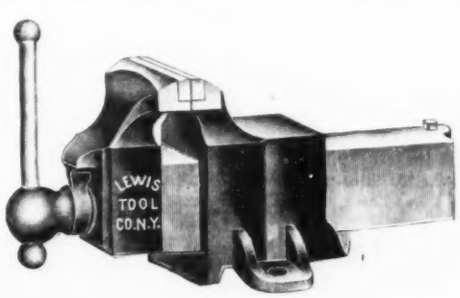

Fig. 4.—Lewis Plain Bottom Quick Acting Vise.

a turn of the thumb screw held securely anywhere. The thumb screw is at the end of a strong lever through which the center bolt passes, the other

end of the lever being held in position by two lugs for that purpose. The handle can be held at any point for convenience in revolving by the set screw in Fig. 1. The jaws are of crucible steel. It is stated that several of the vises have been in some of the largest shops for over a year and have successfully withstood severe tests. The vises are made in both swivel and flat bottoms, as seen in Figs. 3 and 4, each in six sizes, with jaws 3½, 4, 4½, 5, 5½ and 6½ inches wide, opening 5, 6, 7, 8, 9 and 10 inches. The weights vary according to size and style from 30 to 153 pounds. The vises are listed at from $8.50 to $35 each.

Trojan One-Hand Nail Puller.

Hagen & Reid, Troy, N. Y., are offering the one-hand nail puller which is shown in the accompanying cut two-thirds its actual size. It is made of tool steel with

Trojan One-Hand Nail Puller.

malleable iron handle, and is designed to pull tacks, wire brads and wire nails as large as 6d. It is referred to as noiseless, light and strong. The noiseless feature is pointed out as particularly adapting it for use in hardware stores, where the usual noise of opening boxes in the presence of customers, especially ladies, is disagreeable and annoying. In the home, it is pointed out, it fills the place of the tack puller, at the same time being large enough to open boxes.

H. D. Hull, Troy, N. Y., advises us that in 1896 the H. D. Hull Company were formed to avoid possible litigation, Mr. Hull holding twenty-three twenty-fifths of the stock. The matter in question having been settled, and finding no advantage but rather expense and annoyance in the style, the H. D. Hull Company have been dissolved and the old firm name of H. D. Hull resumed. All demands against the company, it is stated, will be met by Mr. Hull.

The Walda Improved Sectional Window Weight.

The accompanying cuts relate to an improved sectional window weight offered by Barney & Reed Mfg. Company, 85 Water street, Boston, Mass. The weight hangs from the center to permit free running in the box, the eye being smooth, it is explained, so that there is no wear at points where the cord comes in contact with the shoulder in the head of the weight. It is shown that there is no possible chance of the pieces becoming detached after they have been placed in the box, as they couple and uncouple

The Walda Improved Sectional Window Weight.

only when held nearly at right angles, but it is stated they can be easily removed at any time if necessary. The weight is made round and square to meet the requirements where small, medium or extremely heavy windows are used, with ample or cramped pocket room as the case may be. It is so designed that a workman, by the use of the weight, can balance a sash exactly right before leaving it without breaking a weight or sending to the store for another. Half pound sizes are made by coupling on a ½-pound piece. The weights are packed in small crates containing 100 pounds of a size, both crates and weights being plainly marked. A crate or two of each size may be placed on the floor where the work is being done, so that the sash may be balanced as the workmen proceed. The manufacturers state that the merchant is able to furnish every size required if he has the number of pounds in stock, while not so much capital is invested in the same proportion of stock. Reference is also made to the saving of space and labor, and non accumulation of old stock. The manufacturers furnish fixtures constructed to fit the head of the weight where chain is used. They also carry the thimbles and rings for attachment to the sash.

Adjustable Compass Saw No. 9.

Henry Disston & Sons, Philadelphia, Pa., have put on the market the adjustable compass saw shown in the accompanying illustrations. The handle is apple

Fig. 1.—Adjustable Compass Saw No. 9.

wood, carved and polished, and so constructed that new blades may be quickly inserted. The handle has a take up device, or tightening screw, Fig. 2, to compensate for

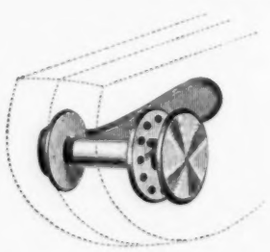

Fig. 2.—Take Up Device for Compass Saw.

different thicknesses of blades, which adds to its convenience when one has use for compass, keyhole and pruning blades. The No. 9 is put up only with compass blades.

Current Hardware Prices.

MARCH 29, 1899.

NOTE.—The quotations given below represent Current Hardware Prices, whether made by manufacturers or jobbers. They apply to such quantities of goods as are usually purchased by retail Hardware merchants. Very small orders and broken packages often command higher prices, while lower prices are often given to larger buyers.

The character @ is used to indicate a range of price: thus discount 50 & 10 @ 50 & 10 & 5%, signifies that the goods in question are sold at prices ranges from 50 & 10% to 50 & 10 & 5%.

Many of the lists referred to in the following quotations are given in *The Iron Age* Standard Hardware Lists (price 50 cents). On many other articles, however, the different manufacturers have their own lists, which they will send to the trade on application. In the advertising columns will be found the announcements of manufacturers of nearly all kinds of Hardware, who will be pleased to furnish the trade information in regard to their goods and prices.

In the present condition of the market while many advanced prices are announced by manufacturers, in many cases lower prices are made by the wholesale trade who have stocks on hand purchased at former quotations.

NEW YORK, Nov. 26, 1897.

NORTH AMERICAN METALINE CO., 43 Third St., Long Island City, N. Y.

Gentlemen: Your favor of 20th inst. received: in reply are pleased to say that your Metalined Bushings have given us entire satisfaction. We first applied them in 1886 or '87 under very trying conditions, put them in fast running loose pulleys with high tension belt, and they gave perfect satisfaction. Since then we have extended their use throughout our works, and they have given satisfaction wherever we have placed them.

Very truly yours,
JAS. PYLE & SONS.

New "Cold" Process of Galvanizing.

In use for more than two years with best and absolutely satisfactory results. Articles that cannot be galvanized by any other process, such as screws, nuts, cutting instruments, tools of every description, springs, locks, artistic metal articles, can be galvanized in a superior manner by this process. The multitude of articles that can be galvanized is without limit. Uniformly smooth surface is preserved, thickness of coating can be regulated saving of spelter about 80%, besides many other advantages. *We grant licenses for territory, also shop rights on royalty basis.*

☞ *AGENTS WANTED.*

U. S. Electro Galvanizing Co.,
348 Broadway, New York.

"Lang Lay" Wire Rope.

Wires and strands twisted in the same direction. Why? To get a longer bearing surface on the wires.
Advantages claimed are greater flexibility and longer life. There's a trick in making it, but we sell it at the same price as ordinary wire rope.
If you don't want this we can give you the regular lay, and also ropes for special applications. Also equipments for Wire Rope Tramways, Cable Hoist Conveyors, Surface and Underground Haulage, etc.

Not responsible for delay or non-fulfillment of contract when caused by strikes, acts of providence or other unavoidable causes.

San Francisco Sept. 29/98.

Hoyt Metal Co.,
St. Louis, Mo.

Gentlemen:-

Reporting on the merits of the Nickelehe Babbitt Metal, we have used a large quantity of it with the most satisfactory results. It has given better satisfaction than any other babbitt metal we have used, including all the standard brands, particularly for electric and marine engine bearings where it is subject to the severest duty.

We will be pleased to give you or others the names of steamers using it, also the names of their engineers and owners to whom any one can write. Without exception we believe, that all will speak favorably of it and from our own experience with it and other metals we decidely recommend it.

Very truly,
FULTON ENGINEERING & SHIP BUILDING WORKS.

Dict. by J. S. Sr. *James Spiers Pres*

Nickelene, although very hard, is so tough that it can be hammered to a knife edge.

Nickelene is being used by many in place of Phosphor Bronze.

Nickelene can be melted in an iron ladle or kettle, and at a little higher temperature than that necessary for melting Babbitt Metal, runs freely and makes a good casting.

NICKELENE IS THE BEST BABBITT METAL IN THE WORLD.

WRITE US FOR PRICE.

YOU WILL SEND US AN ORDER.

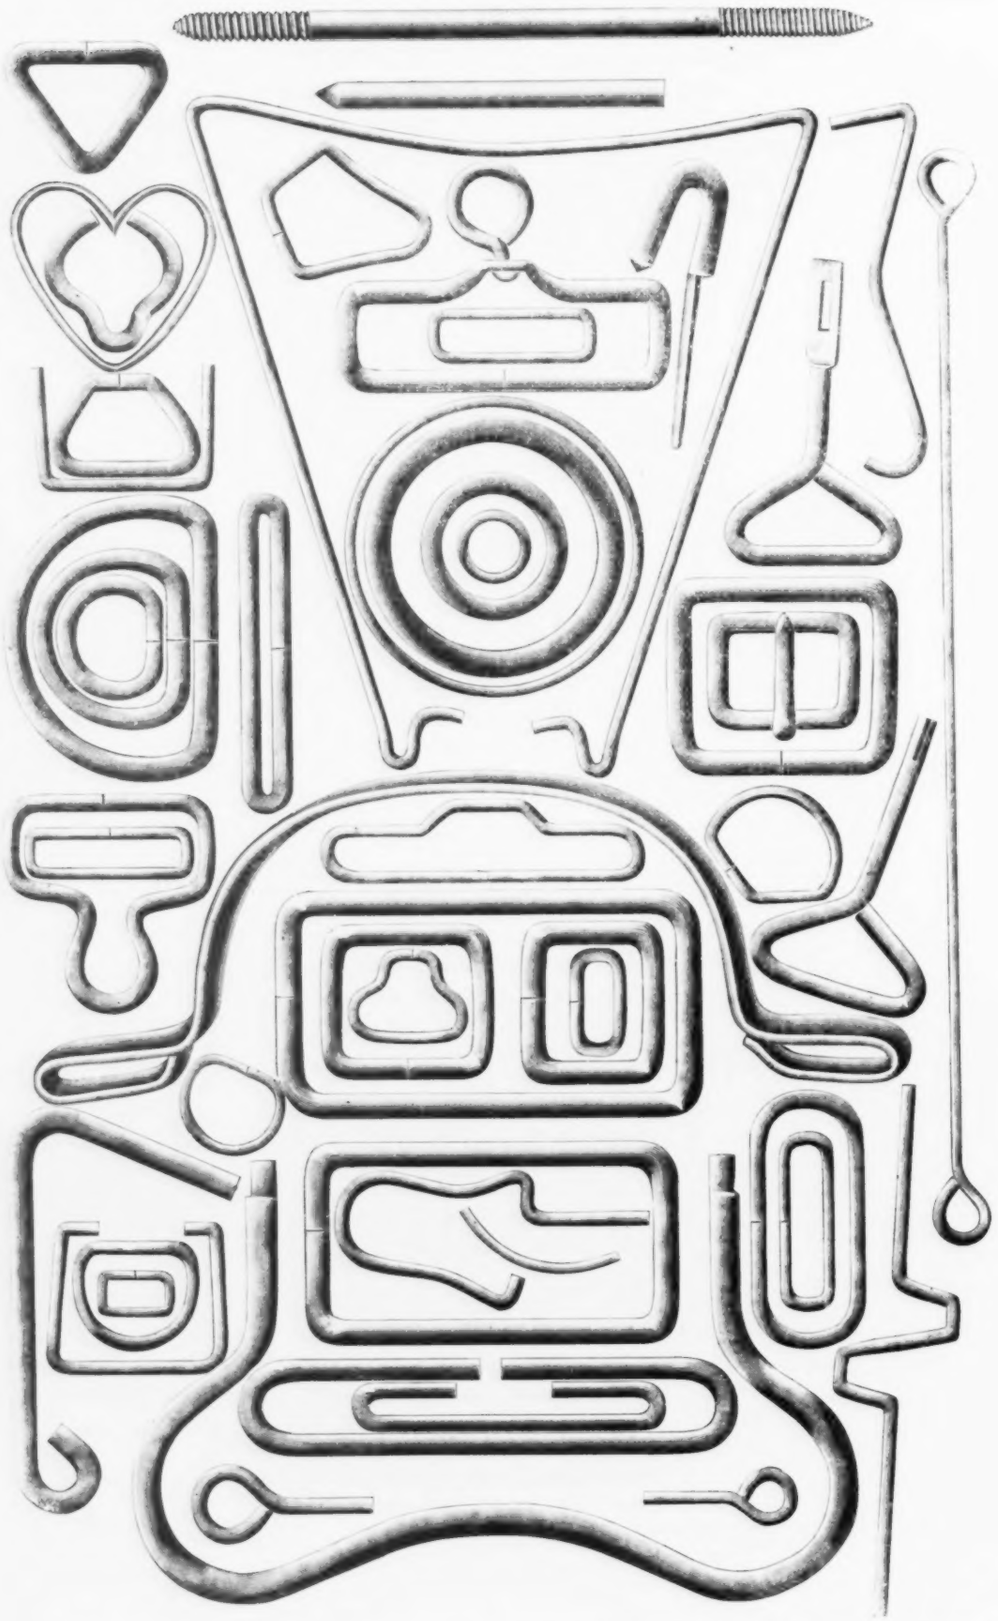
SPECIAL WIRE WORK TO ORDER.

Sole Selling Agents, JOHN H. GRAHAM & CO.; 113 Chambers St., New York.

We cut and bend wire from 15 to 0 gauge and shape it automatically or leave it straight.

This is a Rolled Thread Screw.



These are a few of our curves—in wire. We make all kinds of stamped metal work also, and hope you will give us a chance to bid on anything you have.

R. C. JENKINSON & CO.,

MANUFACTURERS OF ALL KINDS METAL GOODS, &c., &c.,

289-297 Washington St., Newark, N. J.

We make in Sheet Metal anything from a coach-step cover to a small washer or shell. Try us.

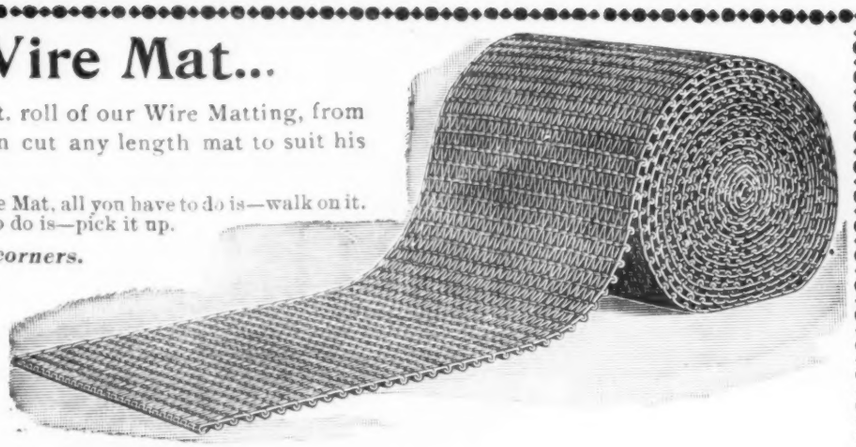
The U. S Wire Mat...

The cut shows a 50 ft. roll of our Wire Matting, from which the dealer can cut any length mat to suit his customer.....

To clean your feet on a U. S. Wire Mat, all you have to do is—walk on it.
To clean the mat, all you have to do is—pick it up.

It does not curl up at the corners.
It does not hold the dirt.
It rolls up like a carpet.
It is made in all widths.

Write for our Booklet.



UNITED STATES WIRE MAT CO., - - Decatur, Ills.

Be Progressive

and use Aluminum Coated Sheet Steel.

Superior in all respects to galvanized iron. It contains all its merits, with none of its defects. It is united more firmly to the base, consequently does not peel like galvanized iron. It can be heated to a red heat without destroying the coating. Sulphurous gases, brine, salt and acids do not affect it as readily as galvanized. It can be soldered with common solder. It is the only metal that will hold kerosene, gasoline and all other carbon oils satisfactorily. Give it a trial and be convinced. Prices and samples furnished on application.

Manufactured by the STEEL AND IRON METAL COATING CO., WEST CHICAGO, ILL.

GOOD & WATERMAN, 316 Security Bldg., St. Louis, Southwestern Selling Agents

ATLAS METAL.
TENSILE 50,000 POUNDS.
Atlas Metal is defined by Prof. Charles James, the well-known Steel Expert, as "A New Commercial Product, standing between Iron and Steel, and uniting in itself the best characteristics of both."
ITS CHIEF POINTS ARE
GREAT STRENGTH. GREAT WEAR. UNIFORMITY. EASILY MACHINED.
HOMOGENEOUS.—Atlas Metal is not surface treated—the castings can be made of any weight, size or thickness, and the metal will be of uniform structure and entirely homogeneous throughout.

H. O. CANFIELD,
Bridgeport, Conn.

Don't be misled into thinking that you will save money if you buy a second-rate steam or electric pump. Such an investment is poor economy. You will find after you have used a cheap pump a little while that your money has been literally thrown away. The various amounts you will be forced to spend for repairs from time to time will lighten your purse. Purchase a Worthington machine. There is no better on the market. If you have not a copy of our catalogue, we will be glad to forward one on receipt of request.

The Hunt System

of machinery for hoisting and handling heavy and bulky materials, **Coal Handling Machinery** in particular.

The foundry car shown is 36 inches from top of rails to top of ladle. The spout when tipped is 17 inches high. The gear is our patent cam gear, locking the ladle at every position. The ladle moves steadily in the same direction as the handle—one twelfth as fast.

Our line is a large one. Write us your requirements. Address the works direct.

DO YOU

Burn Petroleum under Your Boilers?

If You Don't, but would like to, Write us for Suggestions.

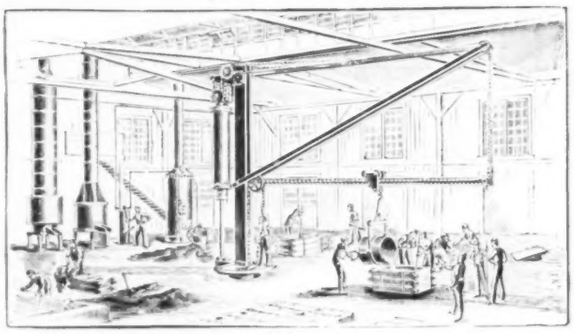
U. S. FUEL OIL EQUIPMENT CO., - 623 Drexel Building, Philadelphia, Pa.

"New Year's! I Hereby Resolve

I am going to make some Money in this, the very last year of the great Century.

"I propose to stop 'hossing' my heavy stuff around in the slow and noisy, main strength and awkwardness way I am doing it now.

"Yes, sir-ee, I am going to hitch my steam boiler to all this heavy lifting and moving, and as Ridgway has been talking about it so much and seems to be doing the business for other people I am going to call him in and see what he has to say about it and what he has to propose."

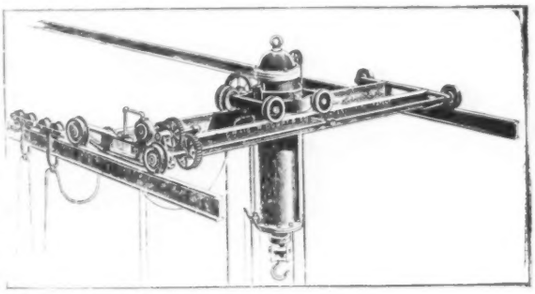


5 ton Steam-Hydraulic Crane in a Foundry.

Bully for you, brother! That's something like making a New Year's resolution. Do you have a foundry? Well, then, it's the Ridgway Balanced Steam (Air) Hydraulic Crane you need See that little cut over there? That's it. Greatest machine ever put in a foundry. **Same molders you have now will turn out 50 per cent. more work for the same wages.** That's what they say—the people who use them. Ask them for yourself To be sure you can work it with Air if you want to. If you have Compressed Air pipe the crane for both so when the Compressor breaks down or valves stick or belt breaks in middle of a big heat all you have to do is to turn a valve and go ahead with Steam. Besides, Steam is the cheaper and there is always enough other work for the Compressor. Stick to your resolution and you'll make money in 1899.

HYDRAULIC AIR HOISTS.

A little oil does the holding back. Air pushes and the whilom dangerous Air Hoist becomes a perfect machine. Best establishments are getting them. Cost more than other air hoists, but are worth the price many times over Will save difference in cost in one hour. But what is the use talking about it? An Air Hoist is peculiarly easy to try. All you have to do is to hang it up. Get one and try it. If you don't think it is the best thing you ever saw, send it back, and no harm is done. We are now too busy to change over other hoists, so don't make a mistake in buying your Air Hoists —but get the latest and best.



"PLEASE TAKE THE ELEVATOR."

Your steam pipe will give you the best and most economical of hydraulic elevators.

THINK OF IT. . .

If a person is entangled in machinery driven with a Friction Clutch, a life may be saved by moving the lever.

Shifting Belts wear out rapidly, and the lacings need frequent attention.

If 100 men are employed in a factory and it is necessary to stop the whole factory five minutes for repairs, or to put on a belt in one department where only 20 men are at work, 100 men will be idle five minutes, which equals five hundred minutes, or **eight and one-half hours.**

If that department is driven with a Friction Clutch, only the time of the men in that department will be lost.

Then Write for Our FRICTION DEPT. CATALOGUE.

A Chuck that Holds.

The trouble with ordinary chucks is that the jaws have to centre the tool and drive it too. It's too much; like an overloaded horse, they slip, and wear out, and break down.

In the Pratt Chuck the jaws have only to hold the tool perfectly true; the positive driver does the driving. It can't slip, even if the jaws are not tightened.

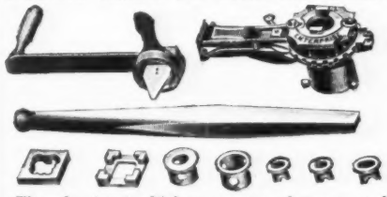
It pays to have tools that will always keep at work.

SEND FOR BOOKLET.

Pratt Chuck Co., Frankfort, New York, U.S.A.

ENTERPRISE

Combined Ratchet Die Stock and Reamer.



Threads pipe in ditches, corners of rooms and other difficult places. Excellent for bench work. Reamer instantly attached or detached and reams all sizes of pipe the stock will take. Mechanical feed. No chatter. Can ream even while thread is being cut. Big advantage in its use.

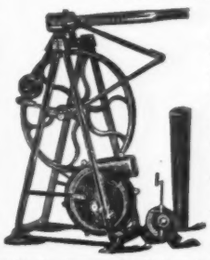
The Oster Manufacturing Company,

CLEVELAND, OHIO, U. S. A.

The New Champion 1898 ANGLE STEEL Blacksmith Blower.

Made with Lever only or with both Lever and Crank.



The New Champion 1898 Angle Steel Blacksmith Blower frame is constructed on new principles, getting entirely away from the old and faulty construction of spreading the four ends at the lower end or base of the frame where stiffness and firmness is most essential.

The New Champion Angle Steel Frame is entirely reversed; it has its bent and stiff parts of the angle steel for its base, and the "four" ends are stamped together at the top or upper end of the frame, connecting all the ends at the smallest possible centre, with the lever knuckle joint on top of the "four" ends, giving a direct downward motion and placing the strain of the lever motion equal on the four uprights, thus forming a binding truss, giving strength and rigidness that was never thought possible to obtain on a blower frame heretofore, also taking away entirely the usual twisting of the frame where the lever knuckle joint is placed in the corner, and the entire strain of the lever motion continually working on one upright.

Fan 16 inches and Fly Wheel 28 inches in diameter—has the capacity of a 50-inch bellows, with our Patent Tuyere Iron and Piping complete, with Lever only.....$15.00

With Lever and Crank combined..... 17.50

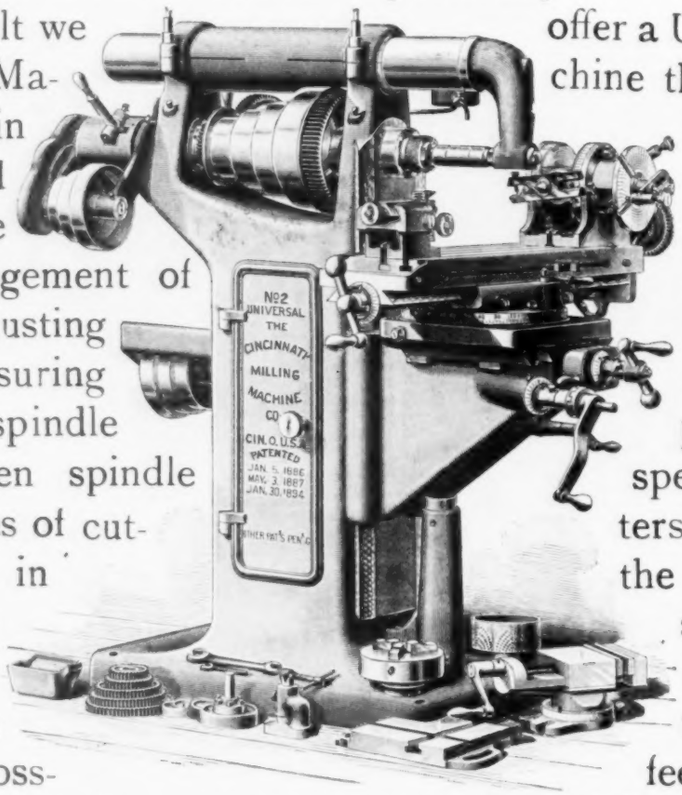
"CINCINNATI" MILLERS

YEARS AGO

We began to build Milling Machines as a specialty. To-day we probably build more Millers of the type and sizes to which we confine ourselves than anybody else.

Our equipment is strictly first-class and the best "feature" about our plant is the "fixed intent" that the machine built to-day must be better than the machine of yesterday.



As a result we offer a Universal Tool Room Milling Machine that has sufficient strength in all working parts to stand severe strain and remain true in alignment.

An arrangement of handles and levers for adjusting and operating the machine, insuring quick manipulation. Ample spindle power and feed power. Sixteen spindle speeds to accommodate all sizes of cutters and twelve distinct changes in the table feed for every spindle speed to suit each piece of work incidental to the tool room. An automatic cross-feed in line with spindle, desirable for rack-cutting, boring, drilling, etc.

These Millers are going into the best shops all over this Country and Europe.

Our catalogue will tell more about them. Write to-day.

Yours for

The Cincinnati Shaper Co.

MANUFACTURERS OF

Standard Machine Tools

1401-1407 SYCAMORE ST.

Cincinnati, Ohio, U.S.A.

It affords us pleasure to announce to the Trade, and those using Machine Tools, that early in 1899 we will put on the market a complete line of both Crank and Geared Shapers of the following sizes:
CRANK SHAPERS, 16 inch, 20 inch and 24 inch stroke.
GEARED SHAPERS, 20 inch, 24 inch and 28 inch stroke.

These tools will be strong, efficient and accurate.

They will be modern in design, and each size will be built to an exact standard in all its parts.

Our shop is equipped for the ***exclusive*** production of SHAPERS, and our tools have all been selected with a view to their efficiency and accuracy in this line of work.

It will be our aim to construct a rigid, powerful tool of ample weight, with extra long bearings, and thoroughly up-to-date in every respect.

It will be found, upon investigation, that our SHAPERS are entirely satisfactory in point of design, workmanship, and, if quality is taken into consideration, in PRICE.

Very truly yours,

THE CINCINNATI SHAPER CO.

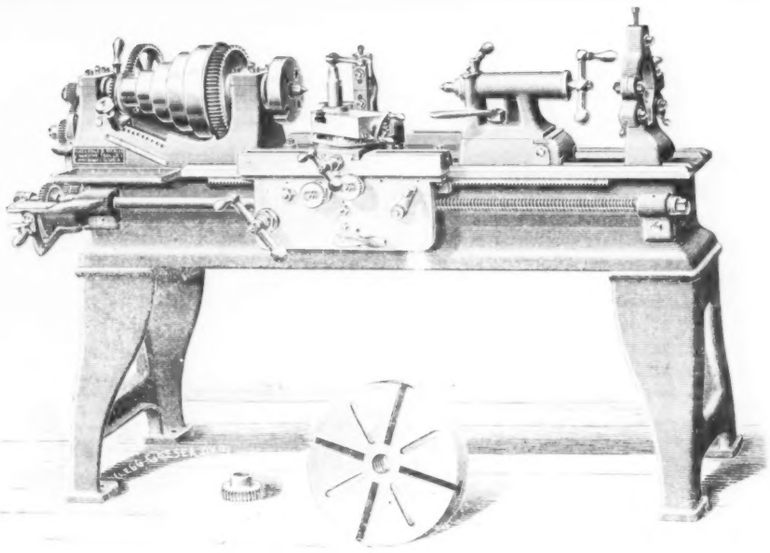
TO WHOM IT MAY CONCERN!

Is the above named Company new to you? Surely not, for we have been in the business for nearly a quarter century, our goods have reached nearly every part of the Globe, either direct through us, or some of our customers. We pride ourselves on having some of the most progressive and successful manufacturing Firms and Corporations on our order books, who have intrusted their orders with us repeatedly, which is the best proof of satisfaction of quality and price. While we do not claim to be the cheapest and best house in the world, or anything of that sort, our aim is to satisfy, and give a man what he buys. We are at your command, in your employment, and will do what is right towards you. That is the way we will hold your confidence, and that means you will keep us employed by placing with us your orders for iron, steel or brass Set Screws, Square Head Cap Screws, Hexagon Head Cap Screws, Round and Filister Head Cap Screws, Flat and Button Head Cap Screws, Collar Screws, Planer Head Bolts, Patch Bolts, Coupling Bolts, Milled Iron Studs, Standard Steel Taper Pins, Semi-finished Hexagon Nuts, Finished Case Hardened Hexagon Nuts, all kinds of Machine Screws, all varieties of Taps, either standard or special, made to your sample, sketch or drawing. Get acquainted with us, send for anything in our line you want. If you overtax our capacity we will increase our facilities. That's all. With compliments of the season and best wishes, we are sincerely yours,

To command,

THE CINCINNATI SCREW & TAP CO.

YOU DON'T HAVE TO FIGURE



If you use our Engine Lathe, as you do if you stick to the old style machine. You can obtain instantly any thread or feed the lathe will cut. Our 20 in. Lathe has eleven *steel* change gears mounted on a shaft which runs in bearings at both ends. By a simple adjustment (made in three seconds) we multiply these changes four times so as to give 44 threads or feeds. We manufacture this same design of Lathe in 14, 16, 18, 20, 22, 24, 27 and 30 in. swing; beds in even lengths.

WRITE FOR CATALOGUE.

Represented in European Countries by Leading Machinery Dealers.

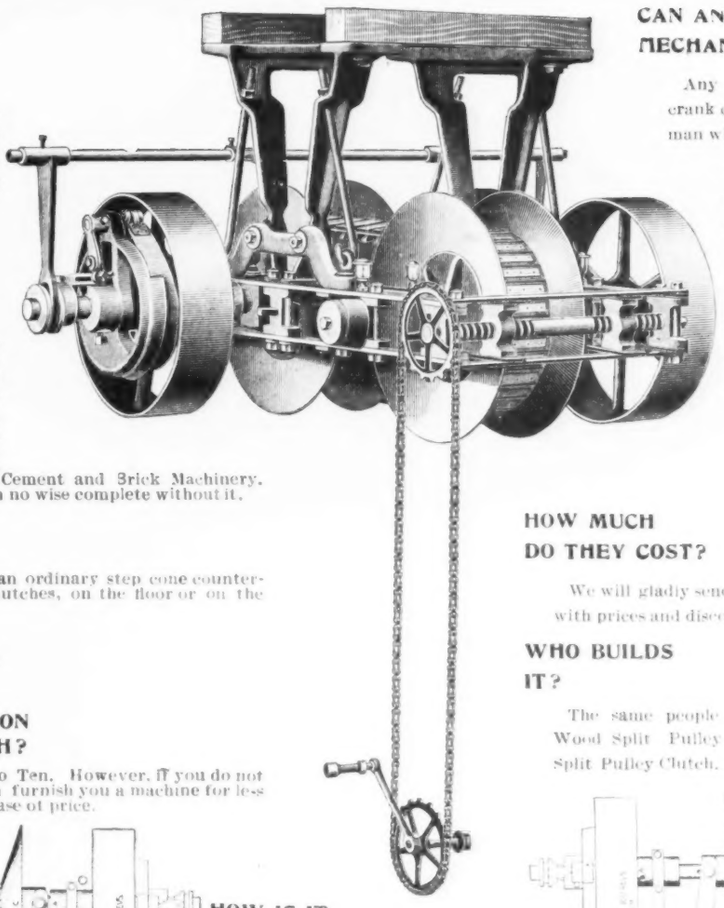
THE NATIONAL MACHINERY CO., Tiffin, Ohio, U. S. A.

WHAT IS "THE REEVES" VARIABLE SPEED COUNTERSHAFT?

Simply a compact little mechanism which enables you to procure any variation of speed on any kind of machine, without perceptible loss of power or time.

ON WHAT KIND OF MACHINES CAN IT BE PROFITABLY USED?

On any kind requiring a change of speed or feed. In particular, Iron Lathes Milling Machines, Drill Presses, Bolt Machines, Shapers, Boring Mills, Wood Working Machinery of all kinds, operating upon the feed. Paper Mill Machinery. Cement and Brick Machinery. A Job Printing Press is in no wise complete without it.



HOW IS IT CONNECTED?

Precisely the same as an ordinary step cone countershaft, with or without clutches, on the floor or on the ceiling.

HOW MUCH H. P. WILL IT TRANSMIT?

From Two to Twenty.

HOW MUCH VARIATION WILL IT ACCOMPLISH?

Anything from One to Ten. However, if you do not require so much, we can furnish you a machine for less at a corresponding decrease of price.

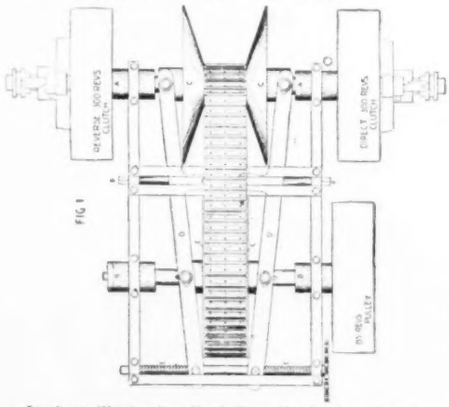


FIG. 1

In above illustration, the belt on the driving discs has assumed its smallest diameter and the driven shaft is propelled at its lowest speed.

HOW IS IT MADE?

That is just a little difficult to answer in so brief space as we can spare. Kindly refer to the outline cuts and briefly we will explain:

The shaft upon which the clutches are mounted, we shall call the driver. This shaft always runs at a uniform speed, and is belted direct from the line shaft. The other shaft mounted parallel with the first is the driven. The novel feature of the mechanism is the two sets of split mounted discs. One disc of each set is attached to a common pivoted straight bar, which bar is operated upon by a screw in such manner as to bring together one set of discs as the other set is forced apart.

The inner side of these discs, as will be seen, form a V shaped groove, in which is fitted an especially designed belt, having its tractional bearing on the edges instead of the bottom, as in an ordinary belt.

The operation is very simple. One set of discs act as driver the other as driven. As the driving circumference of one is increased, the other is decreased; the power is transmitted and the variation anything within the compass of the two extremes.

CAN AN ORDINARY MECHANIC OPERATE IT?

Any boy who can turn a little crank can use it just as well as the man who invented it.

HOW LONG WILL ONE OF THEM LAST?

As long as any ordinary countershaft.

WHAT KIND OF GUARANTEE DO YOU FURNISH?

We guarantee the mechanism to do just what we claim it will do.

HOW MUCH DO THEY COST?

We will gladly send you a complete catalogue, with prices and discounts, upon application.

WHO BUILDS IT?

The same people who build "The Reeves" Wood Split Pulley and "The Reeves" Wood Split Pulley Clutch.

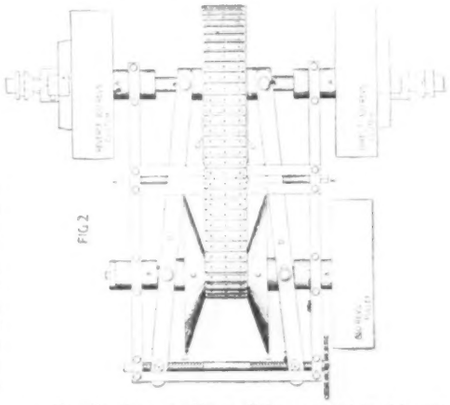

FIG. 2

Exactly the opposite conditions prevail in this cut, and the driven shaft is propelled at its greatest speed.

"The Reeves" Wood Split Pulley,

with interchangeable bushing system for belt power transmission.

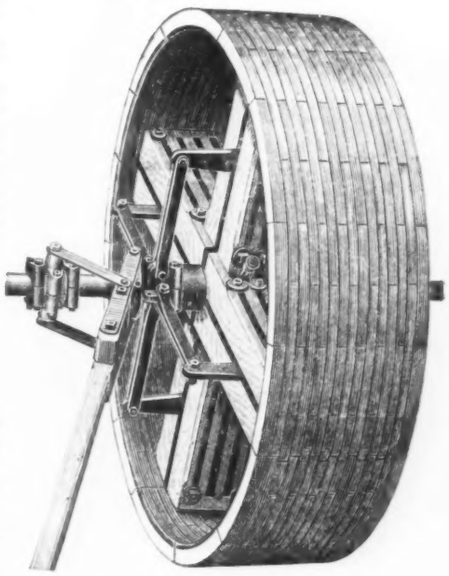
Lighter than an iron pulley. Stronger than a steel pulley. Each pulley will fit thirty-five sizes of shaft. No set screws. No keyway.

Complete stocks carried in every jobbing centre in the United States and Europe.

"The Reeves" Wood Split Pulley Clutch.

Powerful, durable, simple and efficient. Embodying in a clutch the advantages of a wood split pulley, and the full strength of the most powerful steel clutch mechanism.

All parts requiring adjustment stand still when clutch is not engaged.

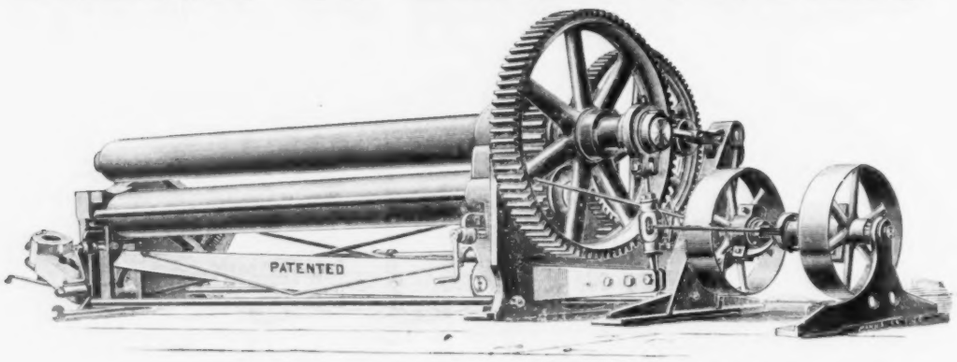


REEVES PULLEY COMPANY,

COLUMBUS, INDIANA, U. S. A.

IMPROVED ROLLING MILL

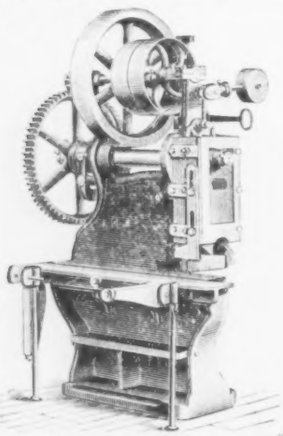
SHEARS AND BENDING ROLLS



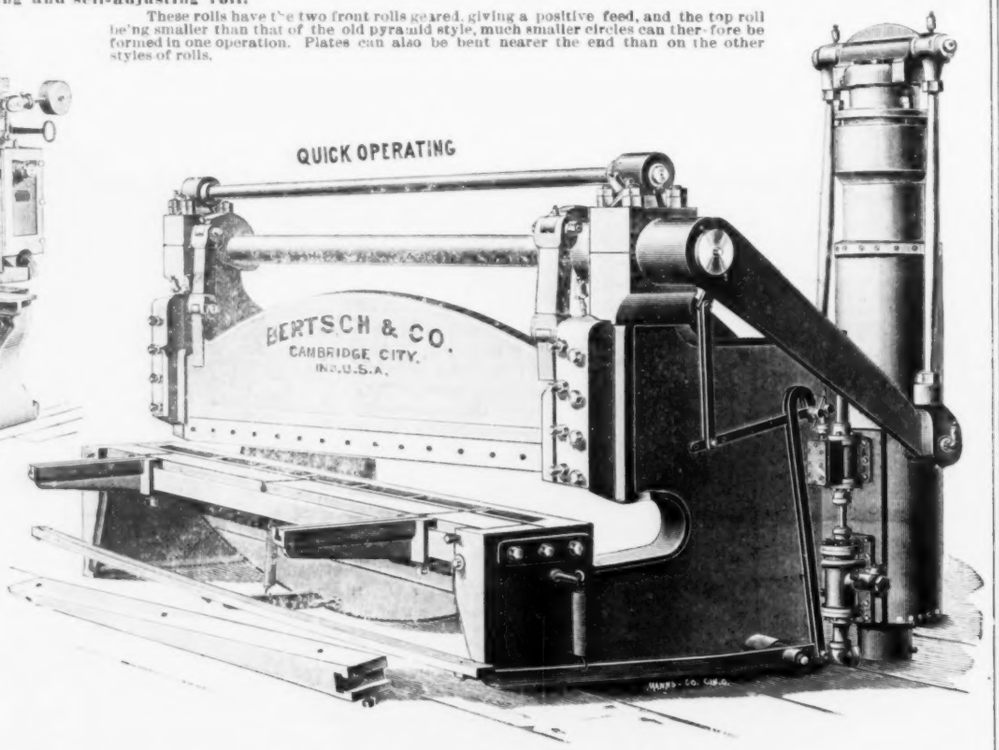
PATENTED BENDING ROLLS.

Our Large Rolls can be easily opened and closed by one man in five to ten seconds by simply disengaging and turning back the hinged housing supporting the top roll. This raises and supports the end of the top roll and at the same time lowers the opposite end of the bottom roll sufficiently to release a formed plate of extreme width. The hinged housing, lever and top roll being so constructed as to be in balance, the machine is opened and closed surprisingly easy, and as the adjustment of the lower feed roll need not be changed in the least after the machine has been opened and closed, it becomes practically **a self-opening and self-adjusting roll.**

These rolls have the two front rolls geared, giving a positive feed, and the top roll being smaller than that of the old pyramid style, much smaller circles can therefore be formed in one operation. Plates can also be bent nearer the end than on the other styles of rolls.



Improved Power Plate Slitting Shear.



PATENT DIRECT-ACTING AUTOMATIC STEAM, AIR OR HYDRAULIC SHEARS.

ADVANTAGES

1st. Nothing in the way to obstruct the view of the operator from seeing a line or mark on his work.

2d. **A Perfect Safety against seriously breaking this shear accidentally.**

3d. **A large saving of steam,** the steam being entirely cut off the instant the cut is made, the knife and the hold-down returning by gravity. **No steam or power is used only when actually cutting,** the engine being attached direct to a compound lever, doing away with a continuous running engine and gearing, unless desired for continuous cutting.

4th. **A perfect automatic engine,** which can be changed from the longest to the shortest stroke in an instant.

5th. **Fewer wearing parts** and less wear than any other machine; from 100 to 300%. There are no complicated parts to get out of order, no check valve to give trouble. There is no piston stuffing box to pack. **No noisy clutch,** shafting, gearing, pulleys, nor heavy fly wheels in continuous motion, thus reducing wear and friction to a minimum.

6th. **The automatic hold-down** is operated from the main rock shaft by compression.

7th. Our machines are built on lines which experience has proven to possess the most features of merit.

8th. **It is impossible to break our machine** by the lapping of the blades, or the introduction of any piece of material of undue thickness between the blades, as unlike a geared machine, it will stop at any point of the stroke, all parts being sufficiently strong to prevent any accidental breakage.

9th. **The shear is also provided with our patent center bearing** attached direct behind the gate or knife bar to prevent same from springing. All parts are rigid. The housings and knife bar being well braced increase the capacity of the Shear, especially when the blades become dulled, as they will not need as frequent grinding.

Made of Swedish Charcoal Steel. What? Why

That's why bicycles built of it **COST MORE** and are **WORTH MORE** than those constructed of **CHEAPER TUBING.**

BICYCLE RIDERS, for their own safety, should demand of the manufacturer or dealer a mount made of "**SHELBY TUBING;**" accept nothing "just as good and a little cheaper."

Shelby Tubing

BICYCLE DEALERS, large and small, should handle lines constructed of "**SHELBY TUBING.**" Why, do you ask?

It helps sell your wheels; it gives you a reputation for handling bicycles of the best construction; it helps you make a fair margin of profit on your investment. Excellent reasons, are they not?

Send for our new 1898-1899 Bicycle Specialty Catalogue.

STANDARD BOOKS
— ON —
Foundry Practice.

The Iron Founder.

A comprehensive treatise on the art of molding, including chapters on core making, loam, dry sand and green sand molding, also crystallization, shrinkage and contraction of cast iron and a full explanation of the science of pressures in molds, added to which are formulas for mixtures of iron, tables, rules and miscellaneous information. By SIMPSON BOLLAND. Illustrated with over 300 engravings. 12mo; cloth, $2.50

The Iron Founder Supplement.

A complete illustrated exposition of the art of casting in iron, comprising the erection and management of cupolas, reverberatory furnaces, blowers, dams, ladles, etc., mixing cast iron, founding of chilled car wheels, malleable iron castings, foundry equipments and appliances, gear molding machines, molding machines, burning, chilling, softening, annealing, pouring and feeding, foundry materials, advanced molding, measurement of castings, wrought iron, steel, etc. Also the founding of statues, the art of taking casts, pattern modeling, useful formulas and tables. By SIMPSON BOLLAND. Illustrated with over 200 engravings; 400 pages; 12mo; cloth, $2.50

American Foundry Practice.

Treating of loam, dry sand and green sand molding, and containing a practical treatise upon the management of cupolas and the melting of iron. By THOMAS D. WEST, practical iron molder and foundry foreman. Fully illustrated. Revised. 408 pages; cloth.....$2.50

Moulders' Text Book,

Being Part II of American Foundry Practice, giving the best methods and rules for obtaining good castings, with detailed description for making molds. A thoroughly practical book that should be in the hands of every molder. By Thomas D. West. 460 pages; cloth.....$2.50

The Practical Brass and Iron Founder's Guide.

A treatise on brass founding, molding, the metals and their alloys, etc. By JAMES LARKIN, late conductor of the brass foundry department in the Penn Works, Philadelphia. A new revised and greatly enlarged edition. Contents: Among the most important and entirely new sections of this edition of this valuable and popular book are the following: Behavior of Metals and Alloys in Melting and Congealing; Malleable Iron Castings; Wrought Iron or Mitis Castings; Manufacture of Steel Castings; Casting of Brass; Casting of Bronze; Bell Founding; Chill Casting; Casting without Core; Casting on to Other Metals; Casting Iron and Other Metals Upon Lace, Embroideries, Fern Leaves and Other Combustible Materials; Some Modern Bronzes. In one volume; 12mo; 400 pages....$2.50

The Encyclopedia of Founding and Dictionary of Foundry Terms

used in the practice of molding. Together with a description of the tools, mechanical appliances, materials, and methods employed to produce castings in all the useful metals and their alloys, including brass, bronze, steel, bell, iron and type founding, with many original mixtures of recognized value in the mechanic arts. Also aluminum, plating, gilding, silvering, dipping lacquering, staining, bronzing, tinning, galvanizing, britannia ware, German silver, nickel, soldering, brazing, ores, smelting, refining, assaying, etc. By SIMPSON BOLLAND, Author of "The Iron Founder," "The Iron Founder Supplement." 12mo; cloth.....$3.00

"Bliss" No. 73½ Overhanging Geared Power Press.

This Press is specially designed for cutting and shaping bicycle stampings, such as crank-hangers, seat-posts, crowns, hub collars, and various styles of connections: also heavy cups and shells of brass, steel, German silver, etc.

It is usually made with a 4½ inch stroke, has 6 inches distance back from center of slide, 8 inches from bed to slide when down, with adjustment up, 5x8-inch opening in bed, 2½ inch cam-actuated knock-out movement, so arranged that it can be timed to suit any special case by adjusting the cam around the shaft. In addition to the Bliss Automatic Clutch on the main shaft it has a friction clutch on the back shaft, operated by a hand lever not seen, so that the operator can stop the slide at any point of the stroke. A countershaft to run the Press at 28 and 40 strokes per minute is furnished. Weight, 6,725 lbs. Write for further particulars

All kinds of machinery, new and second-hand at very reasonable prices.

Locations for Industries.

The Chicago, Milwaukee and St. Paul Railway Company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material markets and surroundings will ensure their permanent success.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines.

The trend of manufacturing is Westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable.

FLORENCE MACHINE CO,
Florence, Mass.

FOR SALE.
MANUFACTURING PLANT.

Situated at Sharon, Pa., between the E. & P. R.R. Penn'a Division, and Erie Railroad. The plot contains four acres and is connected by switch to railroads leading to all points of the compass. The buildings are well adapted for almost any kind of manufacturing. The main building is four stories high, built of brick, and the girders and supports are 12x12 and 14x14 in. square; size of building, 50 by 200 ft. Adjoining this building is the Boiler House, with a 14 ft. Tubular Boiler, and in main building the engine is placed, a 14x20 BUCKEYE, or Mansfield Engine Company's make. The building is fitted with Steam Power Elevator. All machinery is in good condition.

An additional building of brick and iron clad 185 x65 ft., one story, and built in connection with this is an iron-clad building 85x100 ft., one story, now used as moulding rooms. The cupola has a capacity of ten tons an hour, with blower attached, all ready for use—is in good condition. The core oven is situated close by, and is built of brick, sand shed of frame, and the barn is two stories of frame. Coal and coke yard convenient. The water supply is the best.

The plant is now being operated by well known Stove Manufacturers, who, in a very short time, will occupy their new building, and can give possession of above described premises at almost any time.

Terms will be made satisfactory to the purchaser.

WANTED.

Two second-hand Nut Machines. Must be first-class make and at a bargain. Write for full particulars to

"NUT MACHINERY"
office of *The Iron Age*, 232-238 William Street, N. Y.

WE HAVE FOR SALE

ONE POWER PUMP

BUILT BY THE

Waterbury Farrel Foundry and Machine Co.

This pump is built with separate valve chambers and four single stroke cylinders, 5 in. in diameter by 12 in. stroke, driven through gears designed to give the pump a normal speed of about fifty revolutions per minute, with a delivery of about two hundred gallons per minute. The pump is capable of pumping against a pressure of 1000 lbs. per square inch.

All the pressure parts are made of air furnace gun iron, which have been used but little.

The extra parts for the above include :—

4 cylinders complete.
4 plungers and outside rods to connect same.
2 cross heads and connecting rods complete.
2 slides for cross heads.
2 babbited bearings for driving shaft.
2 caps for main bearings, with bolts and adjusting screws.
1 four-branch discharge fitting, finished complete.
1 " " " planed, not drilled.
4 valve chambers complete.
2 valve seat castings, finished.
1 valve bonnet casting, rough.
4 glands, finished (brass).
1 gland, rough (brass).
1 3 inch Pratt & Cady valve.
1 piece of shafting, 4 15-16 in. diameter, with pinion attached.
1 coupling for above.
1 large gear, same pitch as above.

We have also for sale an accumulator, formerly working in connection with the above. This accumulator has a plunger 12 in. in diameter by 12 ft. stroke.

Included with the above are :—

2 special valves.
2 safety valves.
3 sets of cushioning springs.
2 boiler iron supply tanks, 5 feet in diameter by 7 feet deep.
Regulating attachment for working by-pass direct from the accumulator.
Cast iron weights for the accumulator amount to 45 tons, 104 pieces weighing 831 lbs. each, and 8 pieces weighing 415 lbs. each.

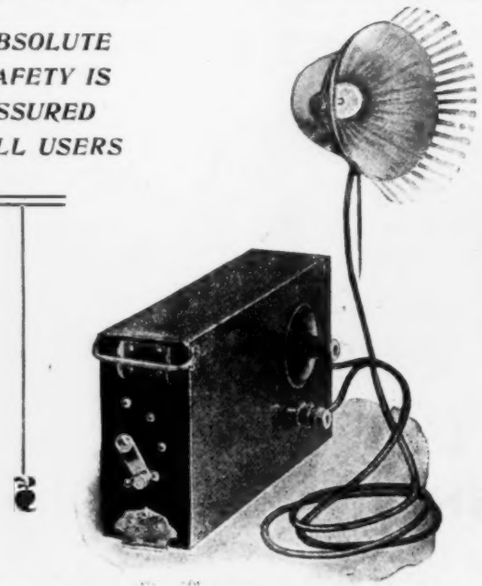
McIntyre's Dry Battery Portable Electric Safety Lamp...

ABSOLUTE SAFETY IS ASSURED ALL USERS



This is an Electric Lamp set in a White Enamel Parabolic Reflector, and can be attached to the cap or any part of the clothing by means of a stick-pin attached to reflector and connected to the battery with a flexible cord. The battery is arranged to be carried on a belt or in the pocket. So the user has free use of hands. The current can be turned off when not in use. Dry batteries are used and can be recharged from direct Incandescent Electric Current Charger and full directions go with each Lamp.

IS USED BY THE FOLLOWING: For Watchmen, Miners, Mine and Gas Inspectors, Boiler Shops, Oil and Gas Works and Gas Fitters, City Sewer and Underground Cable Inspectors; Powder Mills and Warehouses where explosive materials are manufactured and stored; exploring cellars and trenches where leaks occur, and investigating pipe connections where it is impossible to carry an oil lamp or candle for fear of explosion—and all parties requiring a safe portable light. The whole outfit is neat and compact.

Embodying

All Improvements.

The only reasons that higher prices are being constantly paid by the most prominent steam users in the United States for Cahall Boilers are—that they are better made, last longer, cost less for maintenance, show a higher efficiency and make drier steam than any other kind.

Advertising Pocket-Wallets
FOR carrying letters, papers, etc., in the pocket. Size, 7½ x 4 inches. Cheap enough to scatter broadcast; strong enough to wear for six months; good enough to offer your best customers. As an advertising medium these Wallets far outstrip the terribly over-done Calendar.
I invite correspondence from anyone seeking an effective, inexpensive advertising medium combining cheapness, utility and permanence.
Should you decide to send for sample and prices, please act promptly.
FRANCIS I. MAULE,
330 Chestnut Street, Philadelphia.

WOULD you deem it desirable to have an original and unique announcement of your general business (or of any "specialty" you may be pushing) carried around for months constantly next to men's hearts?
The connection between a man's heart and his pocket is often a very direct one.
F. I. M.

1898 EDITION
—OF—
Experimental Science
By GEO. M. HOPKINS.
20th Edition Revised and Enlarged.
914 Pages, 820 Illustrations.
Price $4.00 in cloth; $5.00 in half morocco, postpaid

THIS is a book full of interest and value for Teachers, Students, and others who desire to impart or obtain a practical knowledge of Physics. This splendid work gives young and old something worthy of thought. It has influenced thousands of men in the choice of a career. It will give anyone, young or old, information that will enable him to comprehend the great improvements of the day. It furnishes suggestions for hours of instructive recreation.

UNSURPASSED WORKMANSHIP.

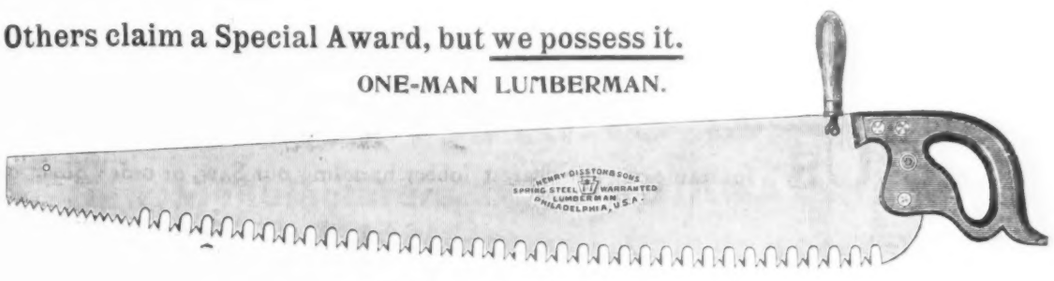
OUR WORLD'S COLUMBIAN EXPOSITION SPECIAL AWARD:

"DISSTON SAWS ARE *UNEXCELLED.*

ORIGINALITY OF DESIGN AND SUPERIORITY OF QUALITY AND FINISH ENTITLE THEM TO HIGHEST COMMENDATION."

Others claim a Special Award, but we possess it.

ONE-MAN LUMBERMAN.

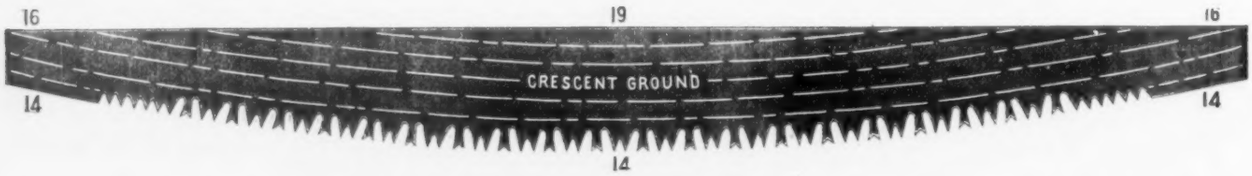


BRANCH HOUSES:

Chicago, Ill. *Louisville, Ky.* *Boston, Mass.* *San Francisco, Cal.* *New Orleans, La.*

A Simple Story Simply Told.

The *Simonds Crescent Ground* and *One-Man Cross-cut Saws* received a *Special Medal* and *Diploma* at the World's Columbian Exposition, Chicago, 1893.



The Award reads as follows: *"For process of tempering to form, thus giving absolute uniformity of temper, a stiffness that never leaves them, and making possible the use of a high grade of steel. The crescent grinding gives the edge, or teeth, an even gauge or thickness throughout the entire length, increases the back ends of Saw two gauges, and makes the Saw thinner in middle of back, thus requiring but little set, and making a very light running Saw."*

The Simonds Crescent Ground Cross-cut Saw is sold subject to following warranty:

We (The Simonds M'f'g Co., established 1832) guarantee that the Crescent Ground Saw will cut 10 per cent. more timber, same labor being used, than any other brand of Saws made in the United States.

Besides the above (our ***Special Award*** on Cross-cut Saws at the World's Fair, Chicago, 1893), we have three other Diplomas, and two other medals, making Three medals and Four Diplomas awarded us at that Exposition, covering our goods in general, and many important points of manufacture in particular, operated and controlled by us alone.

The Pick of Jobbers in the United States handle the SIMONDS Crescent-Ground Cross-Cut Saw.

Write Us for name of your nearest Jobber handling our Saw, or order direct of us.

OFFICE OF
THE MECHANIC ARTS HIGH SCHOOL,
BOSTON, November 17, 1898.

BUCK BROTHERS,
Millbury, Mass.

GENTLEMEN:

There are in use in the Mechanic Arts High School the following tools of your make which have been purchased during the last five years:

Two hundred seventeen sets of carving tools, sixteen in a set. } 5,770
Three hundred twenty-seven sets of carpenters' chisels, four in a set. } Tools.
Ninety sets of wood-turning tools, eleven in a set. }

We have, also, a considerable number of special chisels and gouges. These tools were purchased because we believe them to be the best available, and we have had no occasion to regret our choice. No more than six or eight defective tools have been discovered, and these have been promptly replaced by perfect ones without expense to the school.

Your house is to be commended both for the uniform excellence of its products, and its eminently satisfactory business methods.

Very truly yours,
CHARLES W. PARMENTER, PH. D., Head Master.

IMPORTANT DECISION RELATING TO THE

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, &C.

The U. S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

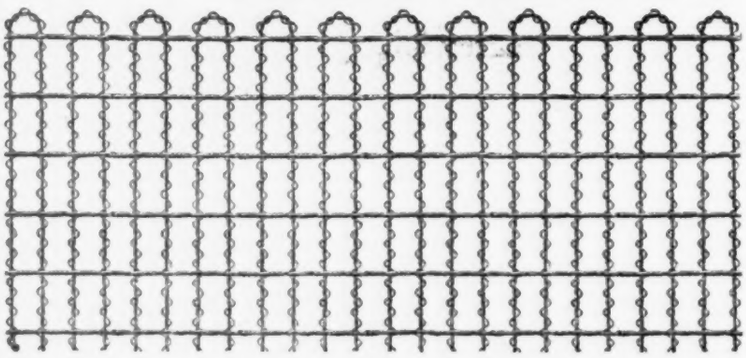
M. M. S. Poultry Fence

Patented July 21, 1896. [TRADE MARK.] Patented July 6, 1897.

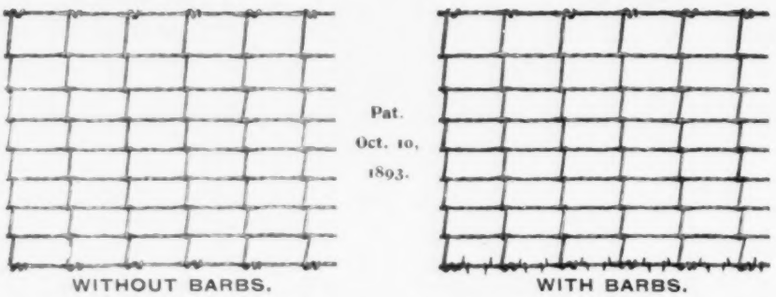
No other line of fencing has ever been put on the market that has grown so rapidly in demand or that has given such universal satisfaction as our M. M. S. Poultry Fencing; a cable selvage and a cable every foot in the height of the fence with its multitude of horizontal lines makes it the strongest and best; stretches up nicely and affords a saving of fully 50 per cent. to the user, as it requires but few posts and no top or bottom rail.

Steel Web Picket Lawn Fence



is used extensively in every state and territory in the Union; indestructible, artistic in design, made entirely of steel, yet cheaper than wood. Full line of steel gates, posts, rail, etc.

Our Cabled Field and Hog Fence



WITHOUT BARBS. WITH BARBS.

has more good qualities than all others combined, perfectly adapts itself to hilly or undulating ground, is easily and rapidly erected, and is the only successful farm fence now produced.

De Kalb Fence Co.

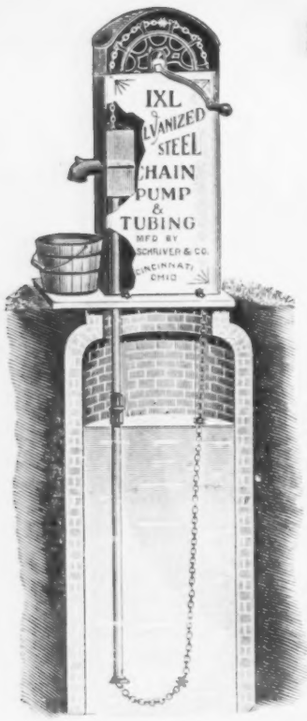
The Largest Door Hanger Plant in the World.

STOWELL MANUFACTURING & FOUNDRY CO.,

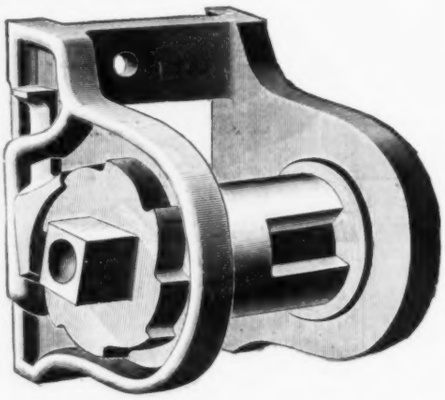
SOUTH MILWAUKEE, WIS.

WM. H. LITTELL, Eastern Agent, 127 Duane St., New York.



"I. X. L." SPECIALTIES.

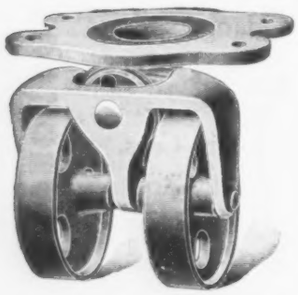
The dealer and consumer are saved much time and trouble in handling the **I. X. L.** Improved Ratchet, as it is so constructed that all the parts are held together as one piece, which avoids the losing of PAWLS, and it will not fall to pieces when the wire slackens after being adjusted to the fence. It has a quick action, positive catch and no keys to fall out.



Chain Pumps have always been in favor on account of the many advantages they have over others, and the objection to the wood curb and tubing is overcome in the I. X. L. Galvanized Steel Curb and Steel Tubing, making it the best and most beautiful pump on the market.

We especially call attention to its superiority over the old Wooden Suction and Iron Pitcher Pumps, as there are no valves to get out of order or dry out, and it will always throw a larger stream of water than any other Pump on the Market.

It Throws More Water and Pumps Easier than any other pump in existence.
It Keeps the Water Pure and Fresh.



"HERCULES CASTERS"

Are the Strongest and Best in the market, having all the advantages of other casters, and Special Features of their own, namely, a larger anti-friction wheel being one-half the diameter of the floor wheel, which makes it revolve easier, its long stem giving sufficient side motion so as to let the floor wheels adjust themselves to uneven surfaces.

Why You Should Use the I. X. L. Galvanized Steel Tubing.

It does not make the water taste as wood tubing does.
It will not rust, being made out of No. 24 Gauge Best Galvanized Steel.
It will not rot or accumulate filth, and leaves the water clear and pure.
It is anti-freezing, as the reservoir piece has a small hole in same, which allows the water to run out.
It only weighs ½ lb. to the foot, while wood tubing soaked with water weighs 6 lbs. or more per foot.
It can be used in wells as deep as 40 feet.

The I. X. L. Galvanized Steel Tubing can also be used on any make of wood curbs, as the stirrup on all other curbs will fit the square reservoir box on the Galvanized Tubing.

"SEE THE HAIR FLY. NOW IS THE TIME"

For the New '98 Chicago Clipper.

Retails for $8.75.

"Known the world over" as the "Greatest Clipping Machine ever invented." Patented in the United Sta es, Canada, England, France, Germany and Russia. Holds World's record for fast horse clipping. Time, 14 minutes. All enterprising hardware men can sell this machine in place of the old fashioned two-hand variety. Can be set up in one minute in any place by any one. Thousands of testimonials from well satisfied customers. Weight of machine, 35 pounds; boxed, 55 pounds. The day is gone by when a man will spend half a day clipping a horse when it can be done with the new '98 Chicago Clipper in as short a space as 14 minutes Get in line. Send for a catalogue.

"STEWART PATENT."
Most Highly Finished Clipper Made.

Hair Clippers. There are two kinds—

"Hair Clippers" and "Hair Pullers." If you want "Hair Pullers" ask for "any old kind." If you want "Hair Clippers" insist on the "Stewart Patent." There's no other "just as good." They will cost you no more than the "inferior kind." Each part is absolutely interchangeable; each Clipper is warranted to cut perfectly. We have just been awarded Gold Medal at Trans-Mississippi Exposition, highest and only award for horse clipping, sheep shearing and cattle grooming machines.

Send for catalogue of "Modern Clippers."

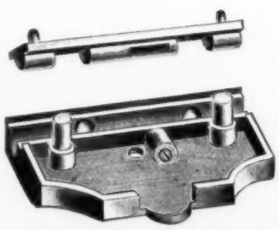
SUCCESSOR TO
HOTCHKISS SONS.

Established in 1850

EDWARD S. HOTCHKISS,

Manufacturer of **Hardware,**

BRIDGEPORT, CONN.



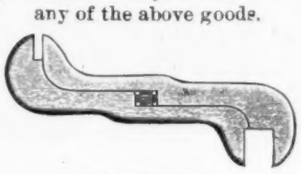
No. 40 B.B. Clipper.

The No. 40 Ball Bearing Clipper, as illustrated above, is one of the best horse clippers that can be manufactured. It is very handsome in appearance, simple in construction, strong and splendidly finished. It sells rapidly, and will give much better than the average profit. I recommend this clipper as a most superior article and solicit your order. The ball-bearing cap and ball carriage, as shown on the left, are in operation held together by the small screw, thus avoiding any chance of losing the balls.

I manufacture and carry in stock a full line of

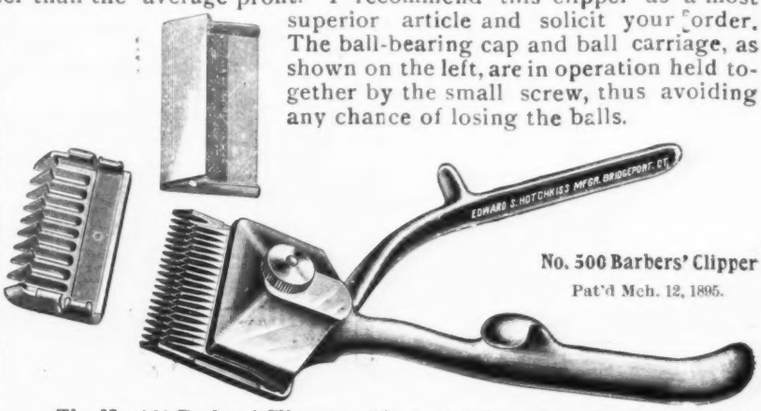
Curry Combs,
Horse and Barbers' Clippers.
Rat and Mouse Traps,
Baxter Pattern
S Wrenches, &c.,

and hope to hear from you when in want of any of the above goods.



S Wrench.

Made in 4, 6, 8 and 10 inch sizes.



No. 500 Barbers' Clipper
Pat'd Mch. 12, 1895.

The No. 500 Barbers' Clipper, as illustrated above, is made in two lengths of cut, and is furnished with or without the adjustable shoe, as shown in cut. This gives two additional lengths of cut. This Clipper is made with a cap entirely separate from the handle, making a very simple and superior construction. Orders and inquiries will receive most careful attention.

Send for our New 1899 Catalogue, finely illustrated and completely describing the

This is the only complete work on the subject.

It gives practical suggestions in regard to the arrangement of the store—office, shelving, counters, racks, bins, sampling, window display, etc., etc.

It describes the practice of Hardware merchants in all parts of the country, and many different methods of accommodating and displaying leading goods.

Illustrations and detailed descriptions with measurements are given, so that Hardware merchants can readily adopt the methods described in the volume.

This book with its mass of practical and detailed information will be of great service—

To progressive Hardwaremen who are desirous of improving their stores;

To those who are intending to open new stores;

To those who want information as to the best methods of displaying and accommodating any given class of goods;

To those who wish to know how other merchants arrange their stores;

To those who are interested in the question of window display;

To those who are extending their business in any direction;

To those who desire practical suggestions in regard to the arrangement and sale of the different Hardware articles.

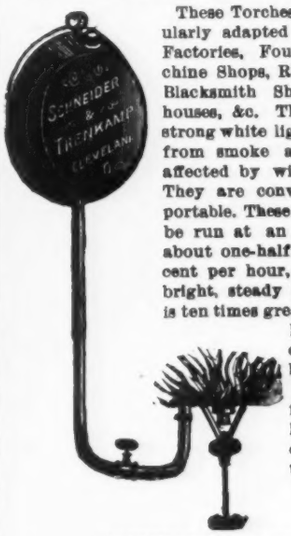
Reliable Torches

Made either for Oil or Gasoline.



These Torches are particularly adapted for use in Factories, Foundries, Machine Shops, Rolling Mills, Blacksmith Shops, Warehouses, &c. They make a strong white light, are free from smoke and are not affected by wind or rain. They are convenient and portable. These Torches can be run at an expense of about one-half cent to one cent per hour, burning a bright, steady light, which is ten times greater than the light of an ordinary gas burner.

Write us for prices. A liberal discount given to the trade.

YUKON Refrigerators.

The Yukon combines all the best points of the best makes with several new features, which makes it the best Refrigerator on the market.

The Yukon is made in two styles, with ***Removable Flues***, and with the ***entire Ice Chamber Removable.***

We note some of the excellent features of the Yukon:

Thoroughly seasoned ash lumber.
Elegance of finish.
Carved panels.
Swinging and removable base board
Solid bronze hardware, Roman gold finished.
Zinc lined. Patent casters.
Galvanized iron flues, ice rack and shelves.

The shelves being so constructed that small dishes placed upon them will not tip over.

Patent Trap, connected with waste pipe in bottom of provision chamber, where it is most accessible, both trap and waste pipe being easily removed, cleaned and replaced, without a back-breaking process or poking with a stick.

The insulation used is ***Granite Rock Wool*** and Charcoal Sheathing.

Buy the Yukon and you will have the best Refrigerator made as well as an elegant piece of furniture.

THE TOLER
Liquid Door Check and Spring.

PERFECTION ATTAINED AT LAST.

Entirely new in style and mechanism, **strong, simple and effective**, giving in results all the best achievements of other checks, together with new and valuable features only to be found in this.

It has a vertical case, with openings only at the top.

It has no plugs or caps screwed to the cylinder ends. It cannot leak. There is no way for the liquid to escape after the Check is applied.

The piston is idle during a greater part of the opening and closing of the door, thus saving the wear on all parts.

It is made of the very best of material throughout.

It works to perfection, closing the door quickly and gently.

It is easily taken apart by anyone; no returning to the factory for anything. This saves time and money. The working of the Check will speak for itself.

Regular finish, Gold Bronze. No extra price for Silver Bronze or Dead Black when so ordered. Furnished Plated in Brass, Nickel, Copper or Silver, Plain or Oxidized, at a reasonable extra charge. No extra charge for Brackets where needed.

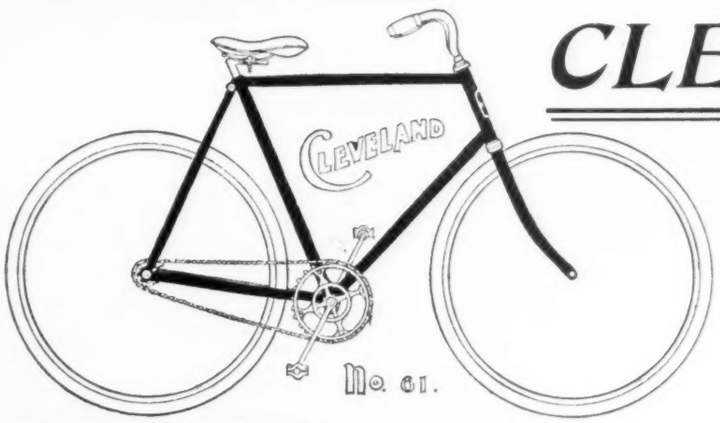
CLEVELAND BICYCLES



Price, $50.

WE OFFER THE TRADE in the above models Bicycles of Cleveland Quality throughout, guaranteed better value than anything on the market at the price. This is good, strong talk, but we mean every word of it.

Such distinctive features as Burwell Detachable Tires, Burwell Dust-Proof Self-Oiling Bearings and the Cleveland Chain are included in the make-up and equipment.

Every detail of construction demonstrates the why and wherefore of Cleveland Reputation.

We like nothing better than to talk to bicycle dealers who find local competition a little too keen to be perfectly enjoyable.

We've something very interesting to tell you. Write us.

PALMER'S PATENTED HAMMOCKS

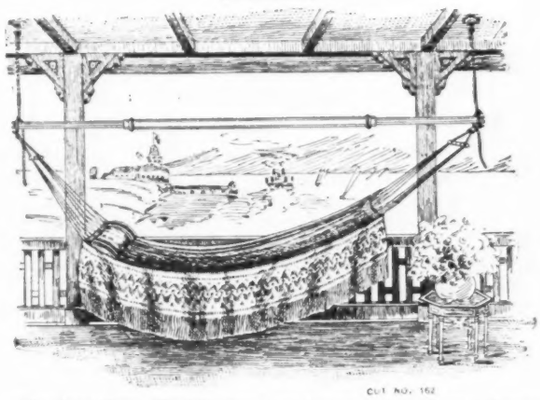
AND TRAPEZE SUSPENSION.

PALMER'S UTOPIA.
(PATENTED)

CUT No 156

The above Figure represents a reclining position in an Adjustable Hammock Support as used indoor. This support may be extended or contracted. The Seat may be lowered or raised by the adjustment of the side cords where attached to the seat.

PALMER'S ARAWANA.
(PATENTED)



CUT NO. 162

The above Figure, No. 162, shows an Arawana slung from a Trapeze adjusted to its maximum extension as regards its suspension from the ceiling.

The Trapeze Suspension, as may be seen at a glance, is especially adapted to Veranda use, is adjustable to different sizes of Hammocks within its scope (from 6 ft. 3 in. to 11 ft.), and to giving different degrees of dip and heights of suspension. Every conceivable swinging motion is obtained without effort.

ESTABLISHED 1840.

GLIDDEN'S METALLIC REPAIR OUTFIT

The one that has the Hinged Plugs.

THIS is the smallest, neatest, most compact and practical repair outfit ever offered to the public. Complete in a tin box 1½ inches long, 1 inch wide and ¼ inch thick. It will repair a puncture at once, without the use of cement, and any woman or child can use it. The plug is made of metal with a **hinged head, which can be forced into a much smaller opening than one with a stationary head.** Two sizes of plugs are furnished with each kit, which will fit ordinary punctures; also a cutter is furnished, to be used when the puncture is too small to admit the plug.

Directions for use. Place the flat plate of the plug so it will be loose on the key. Screw the key into the plug and insert into the hole, leaving the flat plate on the outside of tire. Draw back the key so that the plug will rest flat on the inside of the tire. Screw the flat plate to plug with wrench (left hand thread), and turn key to right. Remove the key by turning to left, and you have a permanent repair which does not injure the tire or its looks.

DISCOUNT TO THE TRADE, ASK YOUR JOBBER FOR IT.

Practical Drawings for the Erection of Low Cost Houses.

Cottage Designs with Constructive Details

BY VARIOUS ARCHITECTS.

A PRACTICAL BOOK FOR BUILDERS AND THOSE INTENDING TO BUILD.

A series of twenty-five designs of cottages, most of which have already been erected, ranging in cost from $600 to $1,500, together with constructive details of interior and exterior finish, all drawn to convenient scale and accompanied by brief specifications.

PRICE, $1.00.

One of the many features of *Carpentry and Building* is the publication in each issue of one or more practical designs of attractive houses with accompanying floor plans, details, &c. A selection of these designs is now presented in convenient book form.

These plans are especially complete and available for the requirements of builders and carpenters, for not only are floor plans and elevations given, but also the ***details of construction,*** showing how the work is done as well as the style of interior trim and exterior finish, all ***drawn to convenient scale.***

The practical value of the designs is further enhanced by the addition of brief ***specifications.***

Practical builders and those who wish to act as their own architects will find in this valuable book many complete details of construction for a variety of attractive, well arranged, and inexpensive cottages or suburban residences.

Engine and Boiler Supplies.
Sherwood Mfg. Co., Buffalo, N. Y.

Engine Stops.
Monarch Mfg. Co., 39 Cortlandt St., N. Y.

Engravers.
Mugford, A., Hartford, Conn.

Exhibition, Export.
International Land & Exhibition Co., New York.

Expansion Bolts.
Church, Isaac, Toledo, O.
McCabe Hanger Mfg. Co. 533-543 W. 22d Street N. Y.
Steward & Romaine Mfg. Co., Phila., Pa.

Expanding Mandrels.
LeCount, Wm. G., So. Norwalk, Conn.

Experimental Work.
International Electric Co., 76 Beekman St., N. Y.

Exterminators, Insect.
Smith, D. S. & Co., Utica, N. Y.

Farm Fencing.
Kokomo Fence Machine Co., Kokomo, Ind.

Faucets, Wooden.
Boston & Lockport Block Co., Boston, Mass.
Sommer's, John, Son, Newark, N. J.

Feed Cutters.
Silver Mfg. Co., Salem, O.

Feed Water Heaters and Purifiers.
Harrisburg Pipe Bending Co., Harrisburg, Pa.
National Pipe Bending Co., New Haven.
Taunton Locomotive Mfg. Co., Taunton, Mass.
Webster, Warren & Co., Camden, N. J.
Wefugo Co., Cincinnati, O.
Whitlock Coil Pipe Co., Elmwood, Conn.

Fence Ratchets.
Schriver, O. P. & Co., Cincinnati, O.

Fencing, Iron and Wire.
Adam, W. J., Joliet, Ill.
American Steel & Wire Co., Chicago, Ill.
Parnum, E. T., Detroit, Mich.
Clinton Wire Cloth Co., Clinton, Mass.
Columbus Wire & Iron Works, Columbus, Ohio.
De Kalb Fence Co., De Kalb, Ill.
Dwiggins Wire Fence Co., Anderson, Ind.
Ellis & Halfenbarger, Indianapolis, Ind.
Gilbert & Bennett Mfg. Co., 42 Cliff St.
Ludlow Saylor Wire Co., St. Louis, Mo.
Stewart Iron Works, Cincinnati, Ohio.

Fencing Machines.
Kokomo Fence Machine Co., Kokomo, Ind.

File Cutting Machines.
Hess Machine Works, Phila., Penna.

Files and Rasps.
Manufacturers of.
Arcade File Works, Anderson, Ind.
Barnett, G. & H. Co., 41 & 43 Richmond, Phila.
Disston, Henry & Sons, Phila., Pa.
Heller & Bros., Newark, N. J.
McCaffrey File Co., Philadelphia.
Nicholson File Co., Providence, R. I.
Stokes Bros. Mfg. Co., Freehold, N. J.

Filters.
Wefugo Co., Cincinnati, O.

Finished Castings.
Franklin, H. H. Mfg. Co., Syracuse, N. Y.

Fire Brick.
Borgner, Cyrus, Philadelphia, Pa.
Gardner, Jas. & Son, Cumberland, Md.
Maurer, H. & Son, 420 E. 23d, N. Y.
Ostrander Fire Brick Co., Troy, N. Y.
Presbrey Stove Lining Co., Taunton, Mass.
Union Mining Co. Mt. Savage, Md.
Valentine, M. D. & Bro. Co., Woodbridge, N. J.

Fire Shovels.
Wheeling Hinge Co., Wheeling, W. Va.

Flanged Fittings.
Latrobe Steel Co., Phila., Pa.

Flexible Shafting.
Chicago Flexible Shaft Co., Chicago, Ill.
Stow Flexible Shaft Co., Phila., Pa.
Stow Mfg. Co., Binghamton, N. Y.

Flint and Emery Paper.
Baeder, Adamson & Co., Phila., Pa.

Floor Hinge
Lawson Mfg. Co., Milwaukee, Wis.

Flue Cleaners.
Jackson Flue Scraper Co., Jackson, Mich.
Jarecki Mfg. Co., Erie, Pa.
Sherwood Mfg. Co., Buffalo, N. Y.

Fly Killers.
Bigelow, J. F., Worcester, Mass.

Foot Rests.
Star Heel Plate Co., Newark, N. J.

Forges, Portable, &c.
Bradley Co., Syracuse, N. Y.

NEW YORK, NOV. 26, 1897.

NORTH AMERICAN METALINE CO., 43 Third St. Long Island City, N. Y.

Gentlemen: Your favor of 20th inst. received; in reply are pleased to say that your Metalined Bushings have given us entire satisfaction. We first applied them in 1886 or '87 under very trying conditions, put them in fast running loose pulleys with high tension belt, and they gave perfect satisfaction. Since then, we have extended their use throughout our works, and they have given satisfaction wherever we have placed them. Very truly yours,

JAS. PYLE & SONS.

New "Cold" Process of Galvanizing.

In use for more than two years with best and absolutely satisfactory results. Articles that cannot be galvanized by any other process, such as screws, nuts, cutting instruments, tools of every description, springs, locks, artistic metal articles, can be galvanized in a superior manner by this process. The multitude of articles that can be galvanized is without limit. Uniformly smooth surface is preserved, thickness of coating can be regulated saving of spelter about 80%, besides many other advantages. *We grant licenses for territory, also shop rights on royalty basis.*

Fulton Engineering & Ship Building Works

Not responsible for delay or non-fulfillment of contract when caused by strikes acts of providence or other unavoidable causes

San Francisco Sept. 29/98.

Hoyt Metal Co.,
St. Louis, Mo.

Gentlemen:-

Reporting on the merits of the Nickelene Babbitt Metal, we have used a large quantity of it with the most satisfactory results. It has given better satisfaction than any other babbitt metal we have used, including all the standard brands, particularly for electric and marine engine bearings where it is subject to the severest duty.

We will be pleased to give you or others the names of steamers using it, also the names of their engineers and owners to whom any one can write. Without exception we believe, that all will speak favorably of it and from our own experience with it and other metals we decidely recommend it.

Very truly,
FULTON ENGINEERING & SHIP BUILDING WORKS.

Dict. by J. S. Sr. *James Spiers Pres*

YOU WILL SEND US AN ORDER.

Nickelene, although very hard, is so tough that it can be hammered to a knife edge.

Nickelene is being used by many in place of Phosphor Bronze.

Nickelene can be melted in an iron ladle or kettle, and at a little higher temperature than that necessary for melting Babbitt Metal, runs freely and makes a good casting.

NICKELENE IS THE BEST BABBITT METAL IN THE WORLD.

WRITE US FOR PRICE.

DIRECTORY

TO THE

Iron and Steel Works

of the United States for 1898.

Thoroughly Revised. *400 Pages, Cloth Bound.*

Price, Seven Dollars.

This, the 14th Edition, includes a complete Directory to many leading industries which are large consumers of Iron and Steel, and embraces more complete details of all the Iron and Steel Works of the United States, and of industries which are large consumers of Iron and Steel, than any preceding edition. Among the many new features are complete lists of the Rail Mills, Structural Mills, Steel Casting Works, Bolt, Nut and Rivet Works, Chain Works, Seamless Tube Works, and Riveted Pipe Works. The lists of Plate and Sheet Mills and of Tinplate and Stamping Works are much more complete than in previous editions. The names and location of all the works described are given in alphabetical order, followed by a description of their character, capacity and products, with the names of the principal officers, etc., including the names of selling agents.

It contains a complete list of

Blast Furnaces,
Rolling Mills,
Bessemer Steel Works,
Open-Hearth "
Crucible "
Plate and Sheet Mills,
Rail Mills,
Structural Mills,
Steel Casting Works,
Cut Nail "
Tinplate "
Stamping "
Forges and Bloomaries,
Wire-Rod & Wire Mills,
Wire-Nail Works,
Iron and Steel Bridge-builders,
Iron and Steel Ship-builders,
Horse-Nail Works,
Locomotive "
Malleable Iron "
Cast-Iron Pipe "
Cast-Iron Soil and Plumbers' Pipe Works
Wrought Iron, Wrought Steel and Riveted Pipe Works,
Seamless Tube Works,
Chain Works,
Bolt, Nut and Rivet Works,
Car-Axle Works,
Car-Wheel Works,
and Carbuilders in the United States.

Also a List of the Iron and Steel Works in Canada and Mexico.

THE TRENTON MALLEABLE IRON CO., - Trenton, N. J.
ATLAS METAL.
TENSILE 50,000 POUNDS.
Atlas Metal is defined by Prof. Charles James, the well-known Steel Expert, as "A New Commercial Product, standing between Iron and Steel, and uniting in itself the best characteristics of both."
ITS CHIEF POINTS ARE
GREAT STRENGTH. GREAT WEAR. UNIFORMITY. EASILY MACHINED.
HOMOGENEOUS.—Atlas Metal is not surface treated—the castings can be made of any weight, size or thickness, and the metal will be of uniform structure and entirely homogeneous throughout.

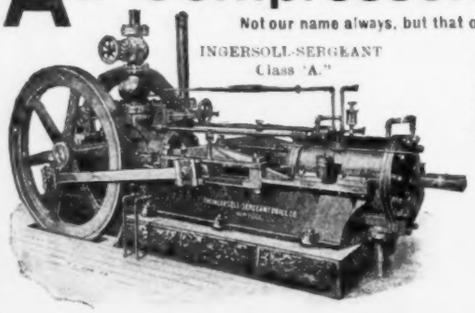
Air Compressors Catalogue No. 32.

Not our name always, but that of others to show what can be done.



INGERSOLL-SERGEANT Class "A."

The Passaic Rolling Mill, Paterson, N. J., with a monthly output of 5,000 tons of structural steel, use 40 cylinder hoists, 12 riveters, 5 drills and reamers, 2 chipping tools and other apparatus, all operated by compressed air from an Ingersoll-Sergeant Class "A" Straight Line Piston Inlet Air Compressor. The plan of distribution of air power necessitated careful engineering and close investigation of the merits of Air Compressors to secure good results. It is the high-class machine, built rigidly, embodying every detail of scientific construction, that wins in a test like this.

Catalogue No. 41, ROCK DRILLS Mines, Quarries, Tunnels, Contract Work, Good Roads.

Catalogue No. 72, POHLE AIR LIFT PUMP Water Works, Railroads, Factories, Irrigation, Etc.

The Ingersoll-Sergeant Drill Co., Havemeyer Building, New York.

Don't be misled into believing that we build only steam pumps. We manufacture electrically-driven power pumps, mine pumps, fire pumps, brewery pumps, marine pumps, pressure pumps, in short, pumps for every condition of service, and are prepared to furnish estimates for anything you need in the way of pumping machinery. Write for our catalogues, which are interesting and complete.

A TRUISM.

A COCHRANE Feed-Water Heater and Purifier after a duplex pump will give better results than a low pressure cylinder after a high pressure cylinder.

For the reason that, so long as the quantity of exhaust is not greater than is necessary to heat the water to 212°, ***all*** of the heat in the steam can be conserved—that is, saved and turned back into the boilers—whereas the low pressure cylinder only enables one to take advantage of the re-evaporation, and of the little further expansion which occurs before the ***remainder*** of the steam passes into the condenser, from whence its heat is carried away and wasted through the condensing water.

As to why a

COCHRANE

will best answer for this service—it would be a pleasure to tell you, though we might add here that the Cochrane Heaters are well designed appliances (since their design has been approved by many of the best known mechanical men in this country), built to withstand corrosion and pitting, and made particularly easy to clean.

Address,

Harrison Safety Boiler Works,
Heater Department,
Col. Sta., Philadelphia, Pa.

LIQUID BRAZING.

The economies and advantages of liquid brazing are not confined to bicycle manufacturers, although they are the ones that have developed it and demonstrated its great advantage and economy over the old-time fire brazing.

One bicycle manufacturer estimates that he is saving twenty dollars per day every day he runs the new system, besides requiring fewer workmen and less fuel.

A descriptive pamphlet will be sent to all who are interested.

SOUNDS ROUGH AND HARSH

To come right out and use the word **LIAR,** but that is just about the size of it!

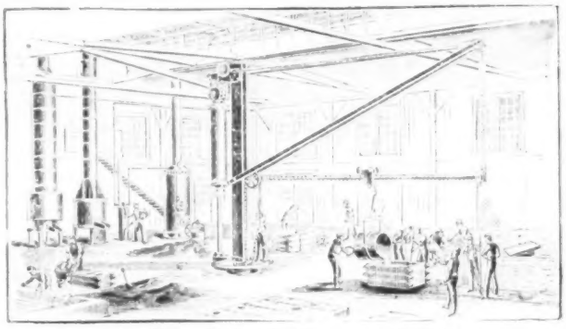
With the Ridgway Balanced Steam (Air) Hydraulic Crane in your foundry the same molders for the same wages will turn out 50 per cent. more work.

If this statement is true you can not afford to be without the Ridgway Crane a single day.

If it is not true we are no ordinary **LIARS,** for we keep saying it, over and over from one year's end to the other.

Now which ?

All wise men know the perfect foundry crane is the desired crane for all duties.



5 ton Steam-Hydraulic Crane in a Foundry.

AIR HOISTS—HYDRAULIC.

This magnificent Air Hoist is now admitted by every body to be the best Air hoist there is. It is more expensive than others, because there is more work to make it. But this gentle, safe and perfect hoist will save the difference in its price in one hour. Get one and hang it up and try it a week or longer and if it don't save its cost over any other send it right back. No trouble to try an Air hoist—easiest of machines to try.

We are furnishing these wonderful hoists to the best shops in this country and Europe, and giving every body two dollars of value for every dollar of money. You ought to know about it.

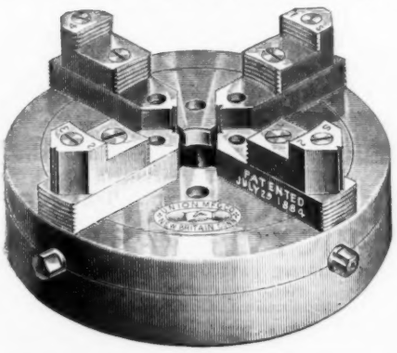
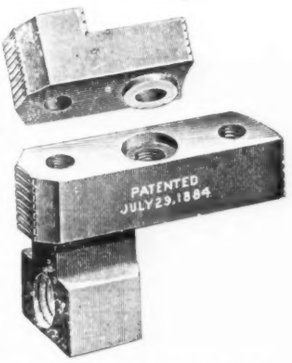
WESTFIELD. MASS. U.S.A.

COMBINATION CHUCK,



No. 21.

Always **Universal** if so required.
Can be changed to **Independent** movement in one second and back again to **Universal** as quickly, by simply sliding stud on the back.
The **Reversible Jaw** feature is unexcelled, combining quickness of adjustment with accuracy and strength.



UNION MFG. CO., New Britain, Conn.

Manufacturers of a full line of Independent, Combination, Universal, Geared, Scroll, Union and Czar Drill Chucks.
Warehouse, 103 Chambers Street, N. Y.

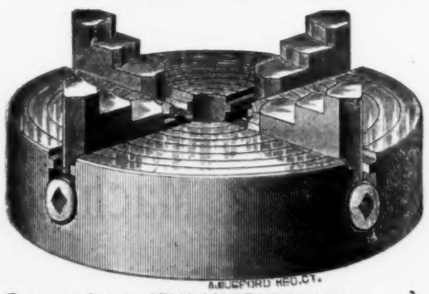
The success that has been achieved by

THE HORTON CHUCK

is its best recommendation.
IT HAS STOOD THE TESTS FOR THE LAST 50 YEARS.
Send for Catalogue. It is up-to-date and tells all about them.

E. HORTON & SON CO., = Windsor Locks, Conn., U. S. A.

CHAMPION INDEPENDENT CHUCKS.



An entirely new line of small Chucks, provided with 3 or 4 independent reversible steel jaws. The best Chuck in the market for foot lathes. Ask your dealer for them or write to us.

THE D. E. WHITON MACHINE CO.,
New London, Conn.

European Agents, SELIG SONNENTHAL & CO.,
85 Queen Victoria St., LONDON.

BAD TEMPERED CHUCKS.

Drill chucks that can't keep their temper have lost many a machinist's temper too.
The jaws soon wear, and the drill slips—always at a critical time
Pratt Positive Drive Drill Chucks keep both their own temper and the machinist's. Tools held by them never slip The flat end of the drill is inserted in the positive driver just above the jaws, and once there it cannot slip, even if the jaws are not tight. The Pratt Chucks are made to standard gauges, and are interchangeable. Cost no more than ordinary kinds. Send for booklet.

PRATT CHUCK CO.,

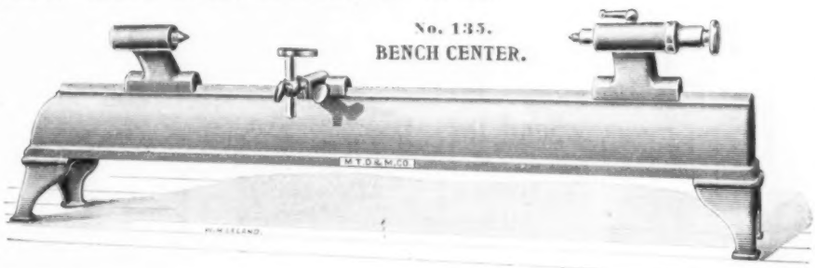
No. 135.
BENCH CENTER.



The Bench Center will swing 6 inches diameter and take 26 inches in length between centers.
The head and foot stocks can be adjusted to any position, and secured by a clamp.
The spindle is of steel ¾ inch diameter, and has a taper hole, which admits of using centers as required, and is adjusted to work by a coiled spring, which admits of considerable variation in the length of the piece to be centered.
The rest can be adjusted to any position and securely fastened by a clamp and supplies a support for the hand or for attaching an indicator for testing work held on center.
Net weight about 50 pounds.
Price includes male and female centers, F. O. B. New Bedford, Mass.

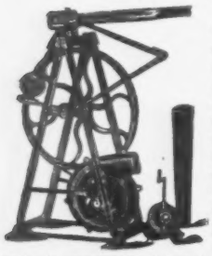
The New Champion 1898 ANGLE STEEL Blacksmith Blower.

Made with Lever only or with both Lever and Crank.



The New Champion 1898 Angle Steel Blacksmith Blower frame is constructed on new principles, getting entirely away from the old and faulty construction of spreading the four ends at the lower end or base of the frame where stiffness and firmness is most essential.

The New Champion Angle Steel Frame is entirely reversed; it has its bent and stiff parts of the angle steel for its base, and the "four" ends are stamped together at the top or upper end of the frame, connecting all the ends at the smallest possible centre, with the lever knuckle joint on top of the "four" ends, giving a direct downward motion and placing the strain of the lever motion equal on the four uprights, thus forming a binding truss, giving strength and rigidness that was never thought possible to obtain on a blower frame heretofore, also taking away entirely the usual twisting of the frame where the lever knuckle joint is placed in the corner, and the entire strain of the lever motion continually working on one upright.

Fan 16 inches and Fly Wheel 28 inches in diameter—has the capacity of a 50-inch bellows, with our Patent Tuyere Iron and Piping complete, with Lever only.....$15.00

With Lever and Crank combined..... 17.50

STANDARD BOOKS
— ON —
Foundry Practice.

The Iron Founder.
A comprehensive treatise on the art of molding, including chapters on core making, loam, dry sand and green sand molding, also crystallization, shrinkage and contraction of cast iron and a full explanation of the science of pressures in molds, added to which are formulas for mixtures of iron, tables, rules and miscellaneous information. By SIMPSON BOLLAND. Illustrated with over 300 engravings. 12mo; cloth, **$2.50**

The Iron Founder Supplement.
A complete illustrated exposition of the art of casting in iron, comprising the erection and management of cupolas, reverberatory furnaces, blowers, dams, ladles, etc., mixing cast iron, founding of chilled car wheels, malleable iron castings, foundry equipments and appliances, gear molding machines, molding machines, burning, chilling, softening, annealing, pouring and feeding, foundry materials, advanced molding, measurement of castings, wrought iron, steel, etc. Also the founding of statues, the art of taking casts, pattern modeling, useful formulas and tables. By SIMPSON BOLLAND. Illustrated with over 200 engravings; 400 pages; 12mo; cloth, **$2.50**

American Foundry Practice.
Treating of loam, dry sand and green sand molding, and containing a practical treatise upon the management of cupolas and the melting of iron. By THOMAS D. WEST, practical iron molder and foundry foreman. Fully illustrated. Revised. 408 pages; cloth..... **$2.50**

Moulders' Text Book,
Being Part II of American Foundry Practice, giving the best methods and rules for obtaining good castings, with detailed description for making molds. A thoroughly practical book that should be in the hands of every molder. By Thomas D. West. 460 pages; cloth..... **$2.50**

The Practical Brass and Iron Founder's Guide.
A treatise on brass founding, molding, the metals and their alloys, etc. By JAMES LARKIN, late conductor of the brass foundry department in the Penn Works, Philadelphia. A new revised and greatly enlarged edition. Contents: Among the most important and entirely new sections of this edition of this valuable and popular book are the following: Behavior of Metals and Alloys in Melting and Congealing; Malleable Iron Castings; Wrought Iron or Mitis Castings; Manufacture of Steel Castings; Casting of Brass; Casting of Bronze; Bell Founding; Chill Casting; Casting without Core; Casting on to Other Metals; Casting Iron and Other Metals Upon Lace, Embroideries, Fern Leaves and Other Combustible Materials; Some Modern Bronzes. In one volume; 12mo; 400 pages.... **$2.50**

The Encyclopedia of Founding and Dictionary of Foundry Terms
used in the practice of molding. Together with a description of the tools, mechanical appliances, materials, and methods employed to produce castings in all the useful metals and their alloys, including brass, bronze, steel, bell, iron and type founding, with many original mixtures of recognized value in the mechanic arts. Also aluminum, plating, gilding, silvering, dipping, lacquering, staining, bronzing, tinning, galvanizing, britannia ware, German silver, nickel, soldering, brazing, ores, smelting, refining, assaying, etc. By SIMPSON BOLLAND. Author of "The Iron Founder," "The Iron Founder Supplement." 12mo; cloth..... **$3.00**

OWNING AND OPERATING THE STILES AND PARKER PRESS CO.

"Bliss" Inclinable Power Presses (Patented).

There is probably no type of power presses that has met with such **general favor** among manufacturers of sheet-metal goods as the line of inclinable presses which we designate by the numbers **18 to 22.** Nearly all the best manufacturing establishments in this line in America, and many in Europe and Australia, employ one or several of these presses. The range of work for which they are adapted covers nearly every kind of blank-cutting, perforating, forming, and combination die work, including a large proportion of the operations needed in the manufacture of cans, pieced tinware, brass goods, trimmings, etc.

For **convenience, durability, and range of usefulness,** this line of presses is acknowledged to be unsurpassed. Several modifications have recently been made in their construction, giving them greater capacity, accuracy and strength, but they retain the same general appearance as heretofore. The feature which mainly distinguishes this line of presses from others of our make is the **ease with which they may be adjusted from the upright to the inclined position** by a few turns of a wrench. This is a point of importance for users of combination dies and other tools which are preferably used on inclined die beds so as to allow the stamped article to slide off by gravity. The Nos. 21½ and 22 are the only ones of this series which, being very heavy, cannot be used in both positions on the same set of legs. In connection with the slide of all these presses (Nos. 21½ and 22 exempted) we furnish a **knockout attachment** for discharging the work from the upper die, thus dispensing with the numerous springs which, in combination dies, so often prove unreliable.

WRITE FOR FURTHER PARTICULARS. ESTIMATES FURNISHED.

Locations for Industries.

The Chicago, Milwaukee and St. Paul Railway Company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material markets and surroundings will ensure their permanent success.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines.

The trend of manufacturing is Westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable.

Irondale Furnace, Independence, W. Va.

These plants contain over 7,000 tons of machinery and equipment of every description.

C. R. BAIRD & CO.,
Pig Iron,
Philadelphia, Pa.

To the Preferred and Common Stockholders of the

AMERICAN STEEL AND WIRE COMPANY.

During several months past the holders of a large portion of the shares of the American Steel and Wire Company have been carefully considering the advisability of obtaining by purchase or reorganization other leading wire concerns in the United States, among them the Cleveland Rolling Mill Company of Cleveland, Ohio, manufacturers of pig iron, Bessemer steel, and open-hearth steel, as well as wire in its various forms, and the Washburn & Moen Manufacturing Company of Worcester, Mass., and Waukegan, Ill.

It is believed that there would result greater economy in management and operation, and thereby be of advantage to all the stockholders of the several companies. After a thorough investigation of the several properties and their values, actual as well as relative, the acquisition of the following plants has been assured upon a just and fair basis:

Washburn & Moen Manufacturing Company of Worcester, Mass., and Waukegan, Ill.

Worcester Wire Company, of Worcester, Mass.

Cleveland Rolling Mill Company of Cleveland, Ohio.

Oliver & Snyder Steel Co. of Pittsburgh, Pa.

Oliver Wire Company of Pittsburgh, Pa.

Newcastle Wire Nail Company of Newcastle, Pa.

Pittsburgh Wire Company of Pittsburgh, Pa.

Cincinnati Barbed-Wire Fence Company of Cincinnati, Ohio.

Laidlaw Bale and Tie Company of Joliet, Ill., and Kansas City, Mo.

Consolidated Barb-Wire Company of Lawrence, Kan., and Joliet, Ill.

Newburgh Wire and Nail Company of Newburgh, N. Y.

To accomplish the object suggested, the following plan has been agreed upon:

AGREEMENTS HAVE BEEN ENTERED INTO FOR THE ORGANIZATION OF A CORPORATION UNDER THE LAWS OF THE STATE OF NEW JERSEY, TO BE KNOWN AS THE AMERICAN STEEL AND WIRE COMPANY. THIS CORPORATION WILL HAVE AN AUTHORIZED CAPITAL STOCK OF $90,000,000, OF WHICH $40,000,000 WILL BE SEVEN PER CENT. CUMULATIVE PREFERRED STOCK AND $50,000,000 WILL BE COMMON STOCK.

This corporation will acquire the above properties either by direct ownership or through the ownership of not less than a majority of the capital stock, where it is not practicable to purchase the properties themselves.

A SYNDICATE HAS BEEN FORMED WHICH WILL FURNISH THE NECESSARY CAPITAL FOR THE ABOVE PURCHASE, AND IN ADDITION THERETO PROVIDING THE NEW COMPANY WITH A WORKING CAPITAL OF ABOUT $13,000,000, EXCLUSIVE OF THE WORKING CAPITAL OF THE SEVERAL CONCERNS WHICH WILL ENTER THE NEW CORPORATION. WHATEVER MAY BE NECESSARY OF THIS WORKING CAPITAL MAY BE USED FOR THE PURCHASE OF OTHER PROPERTIES WHICH MAY BE AGREED UPON HEREAFTER, THE ENTIRE AMOUNT OF CAPITAL TO BE FURNISHED BY THE SYNDICATE BEING $28,000,000.

The syndicate agreements will provide that the New Jersey company shall acquire such of the capital stock of the American Steel and Wire Company of Illinois, not less than a majority thereof, however, as may be offered, on the following basis:

For each share of the preferred stock of the Illinois corporation the holder thereof shall receive one share of the seven per cent. cumulative preferred stock of the New Jersey corporation, and in addition thereto six-tenths of one share of the common stock of the New Jersey corporation; for each share of the common stock of the Illinois corporation the holder thereof shall receive one and two-tenths shares of the common stock of the New Jersey corporation. It is further arranged that the banking-house of J. & W. SELIGMAN & CO. OF NEW YORK CITY, or its agent for that purpose (THE ILLINOIS TRUST AND SAVINGS BANK OF CHICAGO, ILL.), will exchange the certificates of the American Steel and Wire Company of Illinois, on the above-named basis, provided the same are presented and deposited at either of the offices above named on or before TUESDAY, JANUARY 17, 1899; that in event of delay in issuing the certificates of the New Jersey corporation interim certificates will be issued exchangeable for the engraved certificates when issued. The interim certificates will be issued by either J. & W. Seligman & Co. or their agents (the Illinois Trust and Savings Bank at Chicago).

It is very desirable that the fiscal year of the New Jersey corporation commence on January 1, 1899, and to that end the plan must be consummated at the earliest possible date; therefore, the stockholders in the American Steel and Wire Company of Illinois are requested to present and deposit their stock promptly, so that the same may be speedily and without delay exchanged, and the organization of the New Jersey company facilitated.

Books of transfer of the American Steel and Wire Company of Illinois were closed on Wednesday, January 4th, 1899, and will not be reopened until about January 25th, 1899, and the books of the New Jersey corporation will be opened as soon as the engraved certificates are ready for delivery, not later, however, it is believed, than January 25th, 1899.

IT IS PROPOSED THAT THE NEW COMPANY WILL DECLARE REGULAR QUARTERLY DIVIDENDS ON THE PREFERRED STOCK OF ONE AND THREE-QUARTERS PER CENT., BEGINNING ABOUT APRIL 1ST, 1899.

The undersigned, comprising the entire Board of Directors of the American Steel and Wire Company of Illinois, after a careful consideration, believing that the consummation of the plan proposed will increase earnings, decrease expenses, result in a more stable cost of manufacture, and more satisfactory results to the stockholders, have decided to exchange their own shares in the Illinois corporation for shares in the New Jersey corporation, upon the above-named basis:

J. W. GATES,
A. CLIFFORD,
I. L. ELLWOOD,
CHAS. DOUGLASS,
WM. EDENBORN,
S. H. CHISHOLM,
JOHN LAMBERT,
F. BAACKES,

McIntyre's

Dry Battery Portable Electric Safety Lamp...

This is an Electric Lamp set in a White Enamel Parabolic Reflector, and can be attached to the cap or any part of the clothing by means of a stick pin attached to reflector and connected to the battery with a flexible cord. The battery is arranged to be carried on a belt or in the pocket. So the user has free use of hands. The current can be turned off when not in use. Dry batteries are used and can be recharged from direct Incandescent Electric Current Charger and full directions go with each Lamp.

IS USED BY THE FOLLOWING: For Watchmen, Miners, Mine and Gas Inspectors, Boiler Shops, Oil and Gas Works and Gas Fitters, City Sewer and Underground Cable Inspectors; Powder Mills and Warehouses where explosive materials are manufactured and stored; exploring cellars and trenches where leaks occur, and investigating pipe connections where it is impossible to carry an oil lamp or candle for fear of explosion—and all parties requiring a safe portable light. The whole outfit is neat and compact.

No. 1 weighs 2 lbs., 1½ C. P. Price complete, $4.00. For Meter Reading Only.

No. 2 weighs 3 lbs., 4 C. P. Price complete, $6.00. For General Use.

No. 3 weighs 12 lbs., 10 C. P. Price complete, $12.00. For Several Persons to Work By.

Advertising Pocket-Wallets

FOR carrying letters, papers, etc., in the pocket. Size, 7½x4 inches. Cheap enough to scatter broadcast, strong enough to wear for six months, good enough to offer your best customers. As an advertising medium these Wallets far outstrip the terribly over-done Calendar. I invite correspondence from anyone seeking an effective, inexpensive advertising medium combining cheapness, utility and permanence.

Should you decide to send for sample and prices, please act promptly.

FRANCIS I. MAULE,
320 Chestnut Street, Philadelphia.

WOULD you deem it desirable to have an original and unique announcement of your general business (or of any "specialty" you may be pushing) carried around for months constantly next to men's hearts?

The connection between a man's heart and his pocket is often a very direct one.

F. I. M.

This little wallet is not a trumpery "Souvenir" that belongs in your waste-paper basket. As an acceptable medium for placing the facts of your business in the hands of possible customers—it possesses advantages far beyond the possibilities of any Circular or Calendar.

'Tis a convenient, practical, dignified form of advertisement that any sensible man need not hesitate to offer to others of his kind. **Francis I. Maule.**

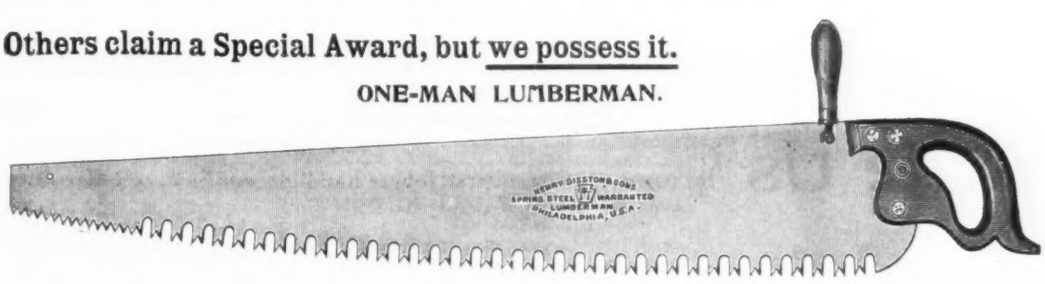
OUR WORLD'S COLUMBIAN EXPOSITION SPECIAL AWARD:

"DISSTON SAWS ARE *UNEXCELLED.*

ORIGINALITY OF DESIGN AND SUPERIORITY OF QUALITY AND FINISH ENTITLE THEM TO HIGHEST COMMENDATION."

Others claim a Special Award, but we possess it.

ONE-MAN LUMBERMAN.

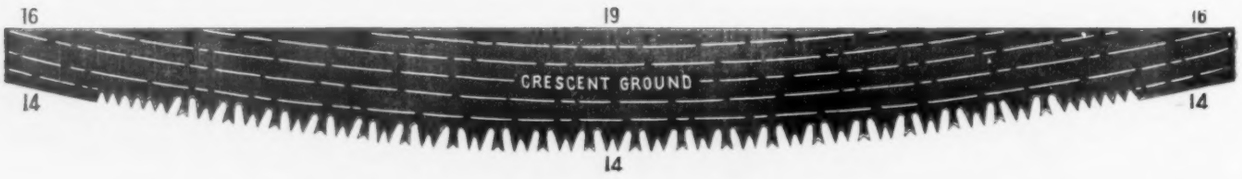


BRANCH HOUSES:

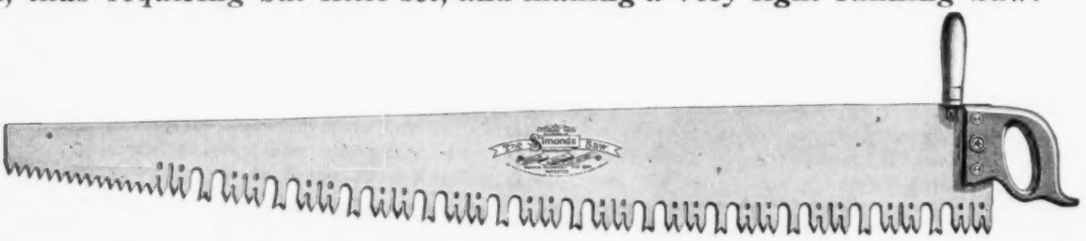
Chicago, Ill. *Louisville, Ky.* *Boston, Mass.* *San Francisco, Cal.* *New Orleans, La.*

A Simple Story Simply Told.

The *Simonds Crescent Ground* and *One-Man Cross-cut Saws* received a *Special Medal* and *Diploma* at the World's Columbian Exposition, Chicago, 1893.



The Award reads as follows: *"For process of tempering to form, thus giving absolute uniformity of temper, a stiffness that never leaves them, and making possible the use of a high grade of steel. The crescent grinding gives the edge, or teeth, an even gauge or thickness throughout the entire length, increases the back ends of Saw two gauges, and makes the Saw thinner in middle of back, thus requiring but little set, and making a very light running Saw."*



The Simonds Crescent Ground Cross-cut Saw is sold subject to following warranty:

We (The Simonds M'f'g Co., established 1832) guarantee that the Crescent Ground Saw will cut 10 per cent. more timber, same labor being used, than any other brand of Saws made in the United States.

Besides the above (our *Special Award* on Cross-cut Saws at the World's Fair, Chicago, 1893), we have three other Diplomas, and two other medals, making Three medals and Four Diplomas awarded us at that Exposition, covering our goods in general, and many important points of manufacture in particular, operated and controlled by us alone.

The Pick of Jobbers in the United States handle the SIMONDS Crescent-Ground Cross-Cut Saw.

Write Us for name of your nearest Jobber handling our Saw, or order direct of us.

GENTLEMEN:

There are in use in the Mechanic Arts High School the following tools of your make which have been purchased during the last five years:

Two hundred seventeen sets of carving tools, sixteen in a set.
Three hundred twenty-seven sets of carpenters' chisels, four in a set.
Ninety sets of wood-turning tools, eleven in a set.
} 5,770 Tools.

We have, also a considerable number of special chisels and gouges. These tools were purchased because we believe them to be the best available, and we have had no occasion to regret our choice. No more than six or eight defective tools have been discovered, and these have been promptly replaced by perfect ones without expense to the school.

Your house is to be commended both for the uniform excellence of its products, and its eminently satisfactory business methods.

Very truly yours,
CHARLES W. PARMENTER, PH. D., Head Master.

IMPORTANT DECISION RELATING TO THE

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, &C.

The U. S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

THE TOLER

Liquid Door Check and Spring.

PERFECTION ATTAINED AT LAST.

Entirely new in style and mechanism, **strong, simple and effective,** giving in results all the best achievements of other checks, together with new and valuable features only to be found in this.

It has a vertical case, with openings only at the top.

It has no plugs or caps screwed to the cylinder ends. It cannot leak. There is no way for the liquid to escape after the Check is applied.

The piston is idle during a greater part of the opening and closing of the door, thus saving the wear on all parts.

It is made of the very best of material throughout.

It works to perfection, closing the door quickly and gently.

It is easily taken apart by anyone; no returning to the factory for anything. This saves time and money. The working of the Check will speak for itself.

Regular finish, Gold Bronze No extra price for Silver Bronze or Dead Black when so ordered. Furnished Plated in Brass, Nickel, Copper or Silver, Plain or Oxidized, at a reasonable extra charge. No extra charge for Brackets where needed.

GLIDDEN'S METALLIC REPAIR OUTFIT

The one that has the Hinged Plugs.

THIS is the smallest, neatest, most compact and practical repair outfit ever offered to the public. Complete in a tin box 1½ inches long 1 inch wide and ¼ inch thick. It will repair a puncture at once, without the use of cement, and any woman or child can use it. The plug is made of metal with a **hinged head, which can be forced into a much smaller opening than one with a stationary head.** Two sizes of plugs are furnished with each kit, which will fit ordinary punctures; also a cutter is furnished, to be used when the puncture is too small to admit the plug.

Directions for use. Place the flat plate of the plug so it will be loose on the key. Screw the key into the plug and insert into the hole, leaving the flat plate on the outside of tire. Draw back the key so that the plug will rest flat on the inside of the tire. Screw the flat plate to plug with wrench (left hand thread), and turn key to right. Remove the key by turning to left, and you have a permanent repair which does not injure the tire or its looks.

DISCOUNT TO THE TRADE, ASK YOUR JOBBER FOR IT.

CARPENTRY AND BUILDING

Series No. 2.

Modern American Dwellings

With Constructive Details.

The Most Elaborate and Complete Volume of Plans Ever Brought Out for the Use of Architects, Builders and Home Seekers.

BY NUMEROUS ARCHITECTS.

A selection of thirty-seven designs of artistic suburban dwellings erected in various sections of the country, at a cost ranging from $2,000 to $5,000, and embracing floor plans, elevations and constructive details showing interior and exterior finish, all drawn to a convenient scale, together with brief extracts from the specifications.

Those who contemplate building a home will find this volume of great value. In connection with each design is given the necessary floor plans, elevations and constructive details as will enable any practical builder to execute the work. The plans are diversified in both the interior arrangement and external appearance, and will afford to persons of various requirements an opportunity to select a home suited to their taste and convenience.

33 Half-Tone Engravings. 127 Full Page Plates of Elevations, Floor Plans and Constructive Details. 40 Pages of Descriptive Text. Size 9 x 13 in. (oblong), Handsomely bound in cloth. PRICE $2.00.

Practical Drawings for the Erection of Low Cost Houses.

Cottage Designs with Constructive Details

BY VARIOUS ARCHITECTS.

A PRACTICAL BOOK FOR BUILDERS AND THOSE INTENDING TO BUILD.

A series of twenty-five designs of cottages, most of which have already been erected, ranging in cost from $600 to $1,500, together with constructive details of interior and exterior finish, all drawn to convenient scale and accompanied by brief specifications.

PRICE, $1.00.

One of the many features of *Carpentry and Building* is the publication in each issue of one or more practical designs of attractive houses with accompanying floor plans, details, &c. A selection of these designs is now presented in convenient book form.

These plans are especially complete and available for the requirements of builders and carpenters, for not only are floor plans and elevations given, but also the ***details of construction,*** showing how the work is done as well as the style of interior trim and exterior finish, all ***drawn to convenient scale.***

The practical value of the designs is further enhanced by the addition of brief ***specifications.***

Practical builders and those who wish to act as their own architects will find in this valuable book many complete details of construction for a variety of attractive, well arranged, and inexpensive cottages or suburban residences.

SENT, POSTPAID, ON RECEIPT OF ONE DOLLAR.

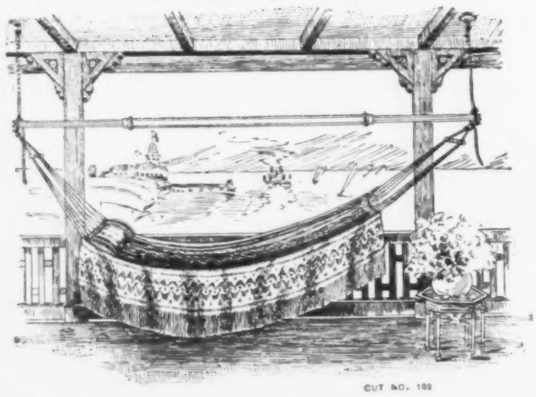
PALMER'S PATENTED HAMMOCKS

WITH TRAPEZE SUSPENSION AND HAMMOCK SUPPORT.

PALMER'S ARAWANA.
(PATENTED)
As used with Trapeze Suspension.



CUT NO. 102

The above Figure shows an Arawana slung from a Trapeze adjusted to its maximum extension as regards its suspension from the ceiling.

The Trapeze Suspension, as may be seen at a glance, is especially adapted to Veranda use, is adjustable to different sizes of Hammocks within its scope (from 6 ft. 3 in. to 11 ft.), and to giving different degrees of dip and heights of suspension. Every conceivable swinging motion is obtained without effort.

PALMER'S UTOPIA.
(PATENTED)
As used with Hammock Support.

CUT No 156

The above Figure represents a reclining position in an Adjustable Hammock Support as used indoor. This support may be extended or contracted. The seat may be lowered or raised by the adjustment of the side cords where attached to the seat.

This Support is adapted to Lawn, Veranda and *Indoor* use, and like the Trapeze Suspension, is ajustable to different sizes of Hammocks within its scope (from 6 ft. 3 in., to 11 ft.), and to giving different degrees of dip and height from floor.

For indoor summer or winter use, it will appeal to all who are inclined to ease and comfort, as it can be taken from a closet, set up, and Hammock hung ready for use in one minute.

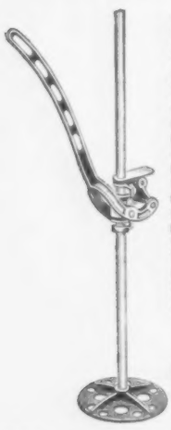
INFRINGERS ARE BEING PROSECUTED.

THE WINNER LIFTING JACK...



will lift a heavier load than any other of or near its weight. This size, No. 1, weighs less than 5 lbs. and will lift 800 lbs. The lifter may be raised or lowered to any point on the standard. Wherever it is stopped it becomes instantly locked. It is loosened again instantly by raising the lever to an upright position. The load may be raised gradually to any desired height (not exceeding the height of the standard) by working the lever up and down like a pump handle. Made in two sizes, Nos. 1 and 2.

The New Double-Arched Fork-Crown

USED ONLY ON

Iver Johnson Cycles

THIS fork-crown is made from a solid drop-forging, and in addition to the strength derived from a double-arch, it also has square shoulders, which, while they add to the beauty of the fork, also add greatly to the strength, as they stand the strain.

NEW YORK, Nov. 26, 1897.

NORTH AMERICAN METALINE CO., 43 Third St., Long Island City, N. Y.

Gentlemen: Your favor of 20th inst. received; in reply are pleased to say that your Metalined Bushings have given us entire satisfaction. We first appiied them in 1886 or '87 under very trying conditions, put them in fast running loose pulleys with high tension belt, and they gave perfect satisfaction. Since then, we have extended their use throughout our works, and they have given satisfaction wherever we have placed them. Very truly yours,

JAS. PYLE & SONS.

New "Cold" Process of Galvanizing.

In use for more than two years with best and absolutely satisfactory results. Articles that cannot be galvanized by any other process, such as screws, nuts, cutting instruments, tools of every description, springs, locks, artistic metal articles, can be galvanized in a superior manner by this process. The multitude of articles that can be galvanized is without limit. Uniformly smooth surface is preserved, thickness of coating can be regulated, saving of spelter about 80%, besides many other advantages. *We grant licenses for territory, also shop rights on royalty basis.*

GALVANIZING DONE AT OUR PLANT.....

Not responsible for delay or non-fulfillment of contract when caused by strikes acts of providence or other unavoidable causes

San Francisco Sept. 29/98.

Hoyt Metal Co.,
St. Louis, Mo.

Gentlemen:-

Reporting on the merits of the Nickelehe Babbitt Metal, we have used a large quantity of it with the most satisfactory results. It has given better satisfaction than any other babbitt metal we have used, including all the standard brands, particularly for electric and marine engine bearings where it is subject to the severest duty.

We will be pleased to give you or others the names of steamers using it, also the names of their engineers and owners to whom any one can write. Without exception we believe, that all will speak favorably of it and from our own experience with it and other metals we decidely recommend it.

Very truly,
FULTON ENGINEERING & SHIP BUILDING WORKS.

Dict. by J. S. Sr. *James Speirs Pres*

YOU WILL SEND US AN ORDER.

Nickelene, although very hard, is so tough that it can be hammered to a knife edge.

Nickelene is being used by many in place of Phosphor Bronze.

Nickelene can be melted in an iron ladle or kettle, and at a little higher temperature than that necessary for melting Babbitt Metal, runs freely and makes a good casting.

NICKELENE IS THE BEST BABBITT METAL IN THE WORLD.

WRITE US FOR PRICE.

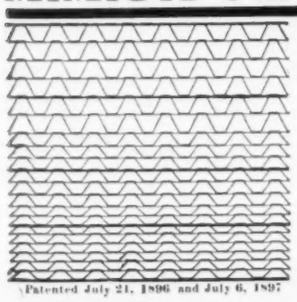
THE STEWART IRON WORKS, CINCINNATI, OHIO, U. S. A

M.M.S. Poultry FENCING



Patented July 21, 1896 and July 6, 1897

is made of the best number nineteen galvanized steel wire, strengthened by a cable selvage and a cable every foot in the height of the fence.

A Fence, Not a Netting.

Its multitude of horizontal wires gives it strength, makes it easy to erect and keeps it in good shape.

50% Saving to the User.

It requires but few posts and no top or bottom rail. Only genuine when **every roll contains the famous M. M. S. trade mark.** Descriptive matter free.

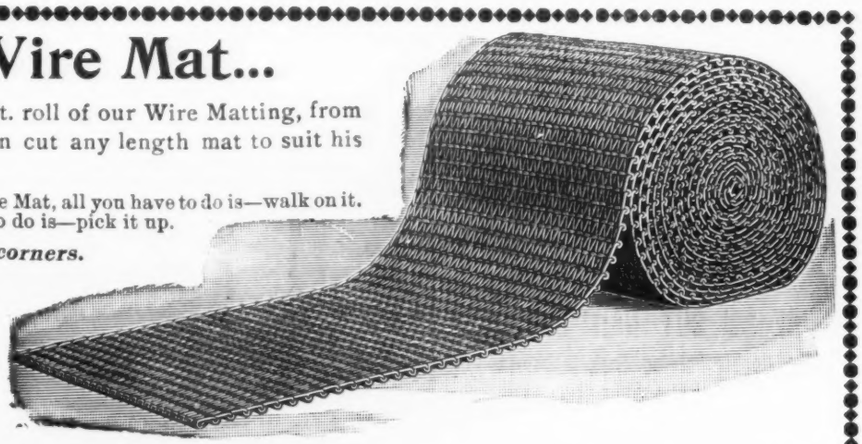
The U. S. Wire Mat...

The cut shows a 50 ft. roll of our Wire Matting, from which the dealer can cut any length mat to suit his customer.....

To clean your feet on a U. S. Wire Mat, all you have to do is—walk on it.
To clean the mat, all you have to do is—pick it up.

It does not curl up at the corners.
It does not hold the dirt.
It rolls up like a carpet.
It is made in all widths.

Write for our Booklet.



UNITED STATES WIRE MAT CO., - - Decatur, Ills.

Be Progressive

and use Aluminum Coated Sheet Steel.

Superior in all respects to galvanized iron. It contains all its merits, with none of its defects. It is united more firmly to the base, consequently does not peel like galvanized iron. It can be heated to a red heat without destroying the coating. Sulphurous gases, brine, salt and acids do not affect it as readily as galvanized. It can be soldered with common solder. It is the only metal that will hold kerosene, gasoline and all other carbon oils satisfactorily. Give it a trial and be convinced. Prices and samples furnished on application.

Manufactured by the **STEEL AND IRON METAL COATING CO.,** WEST CHICAGO, ILL.

GOOD & WATERMAN, 316 Security Bldg., St. Louis, Southwestern Selling Agents.
A. C. JESUP, 120 Liberty St., New York, Selling Agent for Greater New York.

ATLAS METAL.

TENSILE 50,000 POUNDS.

Atlas Metal is defined by Prof. Charles James, the well-known Steel Expert, as "A New Commercial Product, standing between Iron and Steel, and uniting in itself the best characteristics of both."

ITS CHIEF POINTS ARE

GREAT STRENGTH. GREAT WEAR. UNIFORMITY. EASILY MACHINED.

HOMOGENEOUS.—Atlas Metal is not surface treated—the castings can be made of any weight, size or thickness, and the metal will be of uniform structure and entirely homogeneous throughout.

CORRESPONDENCE SOLICITED.

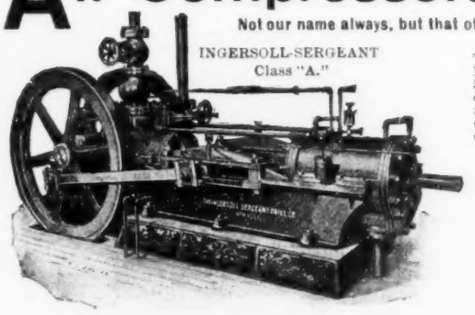
Air Compressors

Catalogue No. 32.

Not our name always, but that of others to show what can be done.



INGERSOLL-SERGEANT Class "A."

The Passaic Rolling Mill, Paterson, N. J., with a monthly output of 5,000 tons of structural steel, use 40 cylinder hoists, 12 riveters, 5 drills and reamers, 2 chipping tools and other apparatus, all operated by compressed air from an Ingersoll-Sergeant Class "A" Straight Line Piston Inlet Air Compressor. The plan of distribution of air power necessitated careful engineering and close investigation of the merits of Air Compressors to secure good results. It is the high-class machine, built rigidly, embodying every detail of scientific construction, that wins in a test like this.

PUMPING MACHINERY

FOR EVERY SERVICE

SINGLE, DUPLEX AND CRANK AND FLY WHEEL TYPES.

Don't be misled by the manufacturers of steam and electric pumps who try to talk you into buying one of their poorly constructed machines because it is low in price. "The best is the cheapest." Worthington Pumps have always been conceded the best; hence, even if their first cost appears high, they will prove the safest investment in the end.

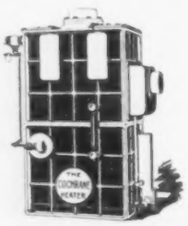
VULCANIZED FIBRE CO., Wilmington, Del.

"EASY ..TO.. CLEAN."

There's a world of meaning in that expression when applied to a Cochrane Heater and Purifier. Suppose all heaters would give as much purification, one as the other. Wouldn't you want the one that was ***easiest*** to ***clean?*** For the scale forming matter—much of it—should remain in the heater, and our Cochranes are just the easiest things to clean out you ever saw.

Another point:—Perhaps you have been bothered with or have had to pay for repairs to your heater?

Then you could thoroughly appreciate



A COCHRANE HEATER,

which requires ***none***, and they never deteriorate in their ability to heat water just as hot as the exhaust steam will make it.

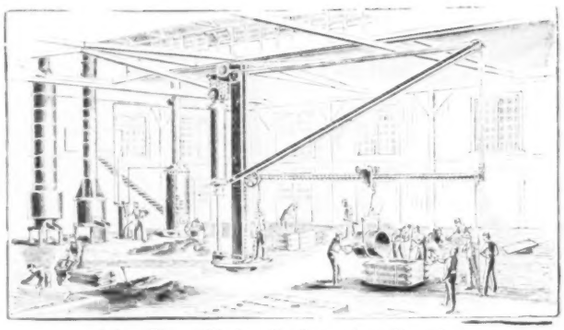
5,000 sets in operation, transmitting from one to forty horse-power.

THIS OUR FIFTH YEAR : : :

to stand here and holler Ridgway Cranes, and we are, to-day, more enthusiastic than ever about the Ridgway Crane. We get into hundreds of shops and are consulted all the time and we are satisfied that the only crane to get is the Ridgway Crane—that is, if you want a crane to make money.

So certain are we of the money-making power of the Ridgway Crane that we are willing to furnish them on condition they may be returned if they don't make money for you. Mark you, we don't say they are to be returned if they don't work right, but if they don't make money.



5 ton Steam-Hydraulic Crane in a Foundry.

Or further: We will furnish Ridgway Cranes to any concern handling stuff by winding cranes and take for our pay one-half what we save in wages.

The Ridgway Crane which goes by either steam or air or water pressure is the greatest machine in the crane line ever designed and is being adopted by the best plants in the world.

HYDRAULIC AIR HOISTS.

No more Air Gun business. The oil in the piston rod makes the Ridgway Air Hoist a perfect machine. We call it hydraulic although that is a wrong name, for it goes by air; the hydraulic merely holds back. You ought to know all about it and the best way is to get a hoist and hang it up and try it yourself. You can tell more in an hour's trial than you could read in a week. The best shops everywhere are getting these hoists.

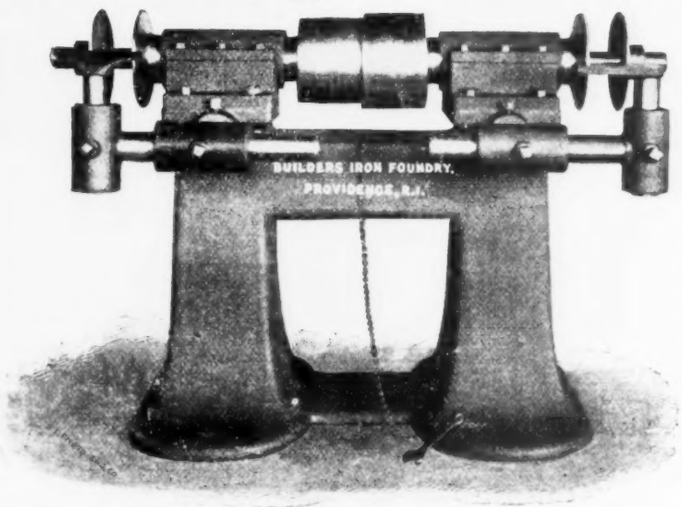
GRINDING AND POLISHING MACHINERY.



HEAVY

FLOOR GRINDER.

36" X 5" X 2 1-2".

This machine is unusually heavy and substantial, and is made in the same thorough manner as our other machines, with the intention that it shall be the best of its class. The boxes are unusually long and are self-oiling and babbitted. The flanges are large, and the loose flanges have spherical seats for the bases of the nuts, which are case-hardened.

The machine takes wheels up to 36 inches diameter, 5 inches face, with 2½ inch hole.

BUILDERS IRON FOUNDRY, Founders and Machinists,

The Hoggson & Pettis Mfg. Co. New Haven, Ct.

The Chuck that Lasts.

The usefulness of ordinary drill chucks is ended when the jaws begin to wear, because the grip of the jaws is all that keeps the drill from slipping. It's different with the Pratt Positive Drive Drill Chuck. In this chuck a positive driver holds the flat end of the drill, and makes slipping impossible. Even if the chuck jaws are not tight, the tool can't slip. The equalizing driver permits the jaws to align the drill perfectly in the chuck, and hold it true. You pay as much for ordinary chucks.

Send for Booklet.

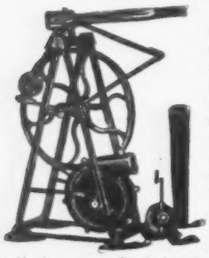
For sale by David Williams Co., 232 William St., N.Y

The New Champion 1898 ANGLE STEEL Blacksmith Blower.

Made with Lever only or with both Lever and Crank.



The New Champion 1898 Angle Steel Blacksmith Blower frame is constructed on new principles, getting entirely away from the old and faulty construction of spreading the four ends at the lower end or base of the frame where stiffness and firmness is most essential.

The New Champion Angle Steel Frame is entirely reversed; it has its bent and stiff parts of the angle steel for its base, and the "four" ends are stamped together at the top or upper end of the frame, connecting all the ends at the smallest possible centre, with the lever knuckle joint on top of the "four" ends, giving a direct downward motion and placing the strain of the lever motion equal on the four uprights, thus forming a binding truss, giving strength and rigidness that was never thought possible to obtain on a blower frame heretofore, also taking away entirely the usual twisting of the frame where the lever knuckle joint is placed in the corner, and the entire strain of the lever motion continually working on one upright.

Fan 16 inches and Fly Wheel 28 inches in diameter—has the capacity of a 50-inch bellows, with our Patent Tuyere Iron and Piping complete, with Lever only.....$15.00

With Lever and Crank combined..... 17.50

Dry Battery Portable Electric Safety Lamp...

This is an Electric Lamp set in a White Enamel Parabolic Reflector, and can be attached to the cap or any part of the clothing by means of a stick pin attached to reflector and connected to the battery with a flexible cord. The battery is arranged to be carried on a belt or in the pocket. So the user has free use of hands. The current can be turned off when not in use. Dry batteries are used and can be recharged fr m direct Incandescent Electric Current Charger and full directions go with each Lamp.

IS USED BY THE FOLLOWING: For Watchmen, Miners, Mine and Gas Inspectors, Boiler Shops, Oil and Gas Works and Gas Fitters, City Sewer and Underground Cable Inspectors; Powder Mills and Warehouses where explosive materials are manufactured and stored; exploring cellars and trenches where leaks occur, and investigating pipe connections where it is impossible to carry an oil lamp or candle for fear of explosion—and all parties requiring a safe portable light. The whole outfit is neat and compact.

No. 1 weighs 2 lbs., 1½ C. P. Price complete, $4.00. For Meter Reading Only.

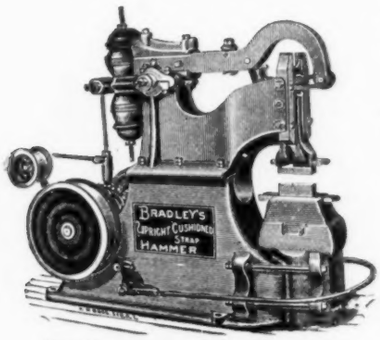
BRADLEY HAMMERS



Bradley Strap Upright Hammer.

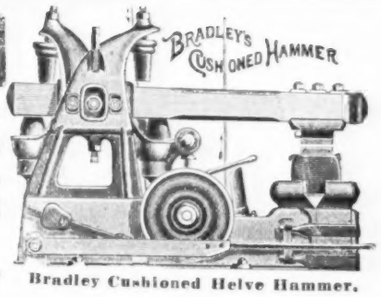
are made in Helve and Upright styles with heads weighing 15 to 500 pounds and forge stock ⅛ to 5 inches diameter.

Each contains ⅓ to ½ more material than any other of same rating.

Their Anvil Blocks weigh nearly or quite double those of other Hammers.

Their output is guaranteed 25 per cent. greater than is possible with other Hammers of same rating.

They are the highest in price but the cheapest in fact.



Bradley Cushioned Helve Hammer.

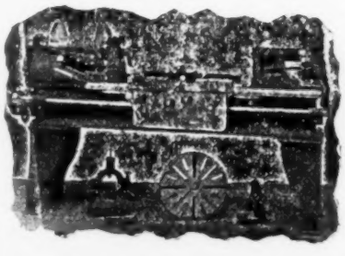
WHY This Lathe is the one for you to buy. WHY



It has easy, quick and accurate adjustments of all feeds.
The range of feeds is very great.
Changes for screw cutting are made instantly; no gears to take off or put on.
The dimensions are liberal and in proportion to the service required of them.
The Lathe in general is easy to operate.
The workmanship insures satisfaction.

Sizes, 14 inch to 42 inch Swing. Beds in even lengths.

Locations for Industries.

The Chicago, Milwaukee and St. Paul Railway Company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines.

The trend of manufacturing is Westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable.

Address

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,
Old Colony Building, Chicago, Ill.

WANTED.

A man with good executive ability with about $10,000 to take an interest in an old established machinery business which has a large export trade. JOHN E. HOLMES & CO.,
612 Arch St., Philadelphia.

Jan. 6, 1899.

Two Electric Lighting Companies in the City of Beloit, Wis., having been consolidated and converted into a Water Power Plant, the following list of machinery has been thrown out of use and is for sale. None of it is over four years old, some of it used but little and the best of it, such as the Engines are as good as new. It will be disposed of cheaply to quick buyers for cash. Inspection and correspondence solicited:

1 60 H. P. Hor. Engine, 8 in. x 14 in. cylinder. Manufactured by John T. Noye Mfg. Co., Buffalo.
1 175 H. P. Bates Corliss 16 in. x 42 in. cylinder.
1 220 H. P. Williams Engine, 18½ in. x 30 in. cylinder.
1 160 H. P. Corliss Engine, 14 in. x 32 in. Manufactured by Hoffman & Billings Mfg. Co.
1 Brownell full front Boiler, 58 in. x 14 ft., pattern No. 70.
1 Root full front Boiler, 70 H. P.
1 Excelsior Iron Works Boiler, 5 ft. 3 in. x 12 ft., full front.
1 Taplin Rice & Co. Boiler, 5 ft. 6 in. x 15 ft., full front, Pumps, Injectors, Governors, Shafting, Floor Stand, Pulleys, Belt Tighteners, Belting, etc., etc. Apply to the

BELOIT ELECTRIC CO.,
BELOIT, WISCONSIN.

FOR SALE.

Manufacturing Plant, manufacturing specialties of Agricultural Implements, with three acres of ground, completely equipped with first-class tools and machinery, together with steam heat and electric lights; employing at present between 50 and 60 men. The plant is in full operation and has been for the past seven years. The demand for the goods always exceeding the capacity, earning fully 20% on the investment. Must be sold within the next 90 days. Plant, tools, machinery and stock on hand would invoice at about $50,000 and will be sold for 50% of this amount.

The factory is located in one of the best manufacturing centers in the Northwest, in a city of 20,000 inhabitants, on the Mississippi River, and with shipping facilities over five different lines of railroad, with two side tracks running to the plant. Everything first-class; the best opening for a small investment in manufacturing in the United States. Best of reasons for selling.

Parties interested, address
"Z-4,"
office of *The Iron Age*, 232-238 William St., N. Y.

FOR SALE.

About 1,500,000 lbs. Steel Plates,
from ¼ in. to 1½ in. 4 ft. x 22 ft. Very best material, low phosphorous.

500,000 lbs. Iron Tank Plates
⅛ in. thick, 2 ft. 6 in. x 7 ft.

About 120,000 lbs Steel Bars
4 in. to 8 in. x ½ in.

Large lot Angles and Channels, 3 Stacks, 40 ft. x 36 in. x 3-8 in.

The above material is all new, coated with one coating of paint, and was in use in the lately demolished Gas Holder of the Consolidated Gas Co., 21st Street and Ave. A, New York, where it may be inspected.

Also 1 50-ton hoist,
with Engine and Blocks complete. Correspondence solicited.

Gane & Sergeant Sts., Philadelphia.

DUBUQUE
THE
Manufacturing Center
OF IOWA.

Trade in many lines of manufactured goods is now and will be for years to come, most active throughout the West. For this reason, responsible manufacturers looking for new locations will be interested to know, that Dubuque, located on the Mississippi River, **THE LARGEST COMMERCIAL AND INDUSTRIAL CITY IN THE STATE**, and only second in population, with cheap fuel, cheap lumber, cheap living and excellent railroad facilities; has exceptional manufacturing advantages.

For detailed information, address **C. H. DAY, Secretary Dubuque Business Men's League, Dubuque, Iowa.**

Rare Opportunity.

Address, "PLANER," 58 Central Avenue,
Cincinnati, Ohio.

Speaking

about our coke a few weeks ago, we stated that in structure it was "strong, yet cellular." Some of the uninitiated may not understand exactly what this means.

Coke can be strong in structure and also so dense and heavy as to be very undesirable. The typical coke is made up of minute cells through which the heat passes, and combustion is rapid and perfect. If the coke is too dense, this action is slow and unsatisfactory. On the other hand there are cokes so soft in structure as to crush in the cupola under heavy charges of ore or iron. These are only an annoyance and vexation of spirit.

You can get a typical coke by ordering a car load from us.

Made of Swedish Charcoal Steel. What?
Shelby Seamless Steel Tubing.
That's why bicycles built of it cost more and are worth more than those constructed of cheaper tubing.
BICYCLE RIDERS, for their own safety, should demand of the manufacturer or dealer a mount made of "SHELBY TUBING;" accept nothing "just as good and a little cheaper."
BICYCLE DEALERS, large and small, should handle lines constructed of "SHELBY TUBING." Why do you ask?
It helps sell your wheels; it gives you a reputation for handling bicycles of the best construction; it helps you make a fair margin of profit on your investment. Excellent reasons, are they not?
SHELBY STEEL TUBE CO., General Sales Offices: American Trust Building, Cleveland, Ohio.
Branch Offices: 144 Chambers St., New York, N.Y. 135 Lake St., Chicago, Ill. 29 Constitution Hill, Birmingham, Eng.

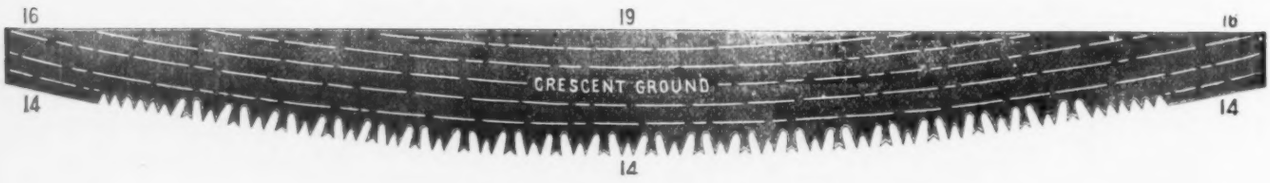
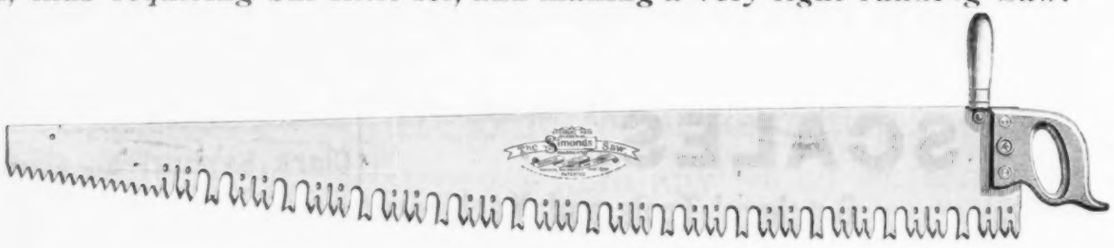
A Simple Story Simply Told.

The *Simonds Crescent Ground* and *One-Man Cross-cut Saws* received a *Special Medal* and *Diploma* at the World's Columbian Exposition, Chicago. 1893.



The Award reads as follows: *"For process of tempering to form, thus giving absolute uniformity of temper, a stiffness that never leaves them, and making possible the use of a high grade of steel. The crescent grinding gives the edge, or teeth, an even gauge or thickness throughout the entire length, increases the back ends of Saw two gauges, and makes the Saw thinner in middle of back, thus requiring but little set, and making a very light running Saw."*



The Simonds Crescent Ground Cross-cut Saw is sold subject to following warranty:

We (The Simonds M'f'g Co., established 1832) guarantee that the Crescent Ground Saw will cut 10 per cent. more timber, same labor being used, than any other brand of Saws made in the United States.

Besides the above (our *Special Award* on Cross-cut Saws at the World's Fair, Chicago, 1893), we have three other Diplomas, and two other medals, making Three medals and Four Diplomas awarded us at that Exposition, covering our goods in general, and many important points of manufacture in particular, operated and controlled by us alone.

The Pick of Jobbers in the United States handle the SIMONDS Crescent-Ground Cross-Cut Saw.

Write Us for name of your nearest Jobber handling our Saw, or order direct of us.

The '98 Chicago Clipper Retails For $8.75.

HARDWAREMEN—DO NOT ORDER

another old-fashioned, out of-date two-hand horse clipper. Be enterprising and order the '98 CHICAGO CLIPPER. The greatest clipping machine ever invented; holds the world's record for fast clipping; time 14 minutes. You can sell one of these machines to every man who used to buy the old fashioned two-hand variety. Ask your jobber about them or send to us direct.

HAIR CLIPPERS.

If you want a clipper "with a reputation" insist on the "Stewart Patent." There is no other "just as good" and they will cost you no more than the inferior kind.

We have just been awarded Gold Medal at Trans-Mississippi Exposition, highest and only award for horse clipping, sheep shearing and cattle grooming machines.

ROME MANUFACTURING COMPANY, Rome, N. Y., U. S. A.

Take Your Choice

There are two lines of bicycles that hardware dealers can handle,

SELLERS AND STICKERS.

A bicycle manufacturer may and may not have a line that goes with a hardware dealer, a jobber picks from the whole lot the goods that he offers with the wants of the hardware dealer in view. From the many good agencies established and from the very many testimonials we have we must feel that we have been successful in our selections.

OFFICE OF
THE MECHANIC ARTS HIGH SCHOOL,
Boston, November 17, 1898.

BUCK BROTHERS,
Millbury, Mass.

GENTLEMEN:

There are in use in the Mechanic Arts High School the following tools of your make which have been purchased during the last five years:

Two hundred seventeen sets of carving tools, sixteen in a set.	5,770 Tools.
Three hundred twenty-seven sets of carpenters' chisels, four in a set.	
Ninety sets of wood-turning tools, eleven in a set.	

We have, also a considerable number of special chisels and gouges. These tools were purchased because we believe them to be the best available, and we have had no occasion to regret our choice. No more than six or eight defective tools have been discovered, and these have been promptly replaced by perfect ones without expense to the school.

Your house is to be commended both for the uniform excellence of its products, and its eminently satisfactory business methods.

Very truly yours,
CHARLES W. PARMENTER, PH. D., Head Master.

IMPORTANT DECISION RELATING TO THE

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, &C.

The U. S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

THIS BORDER SHOWS THE CONSTRUCTION OF THE SPRING TWIST IN THE CABLES BETWEEN THE STAY WIRES OR PICKETS OF THE KILMER FENCE.

THE COMMISSIONERS OF LINCOLN PARK.
SUPERINTENDENT'S OFFICE:
CHAS. W. ANDREWS.

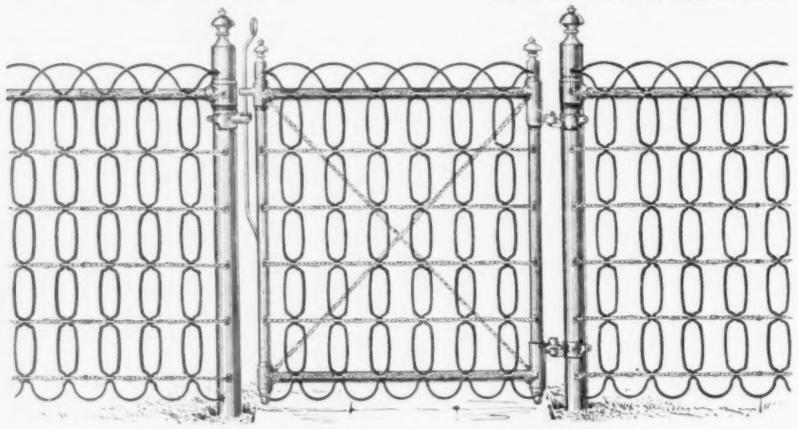
CHICAGO, ILL., February 15, 1898.

The 3,000 feet of Lawn Fence erected around the Lagoon by the Kilmer Wire Manufacturing Company is in every way satisfactory to the Commissioners of Lincoln Park, and I thoroughly endorse this fence as being the best and nicest park or lawn fencing on the market.

CHAS. W ANDREWS, Superintendent.

This Fence will absolutely overcome Expansion and Contraction caused by heat and cold.

This fencing never sags or gets loose. Just the Fence consumers have been looking for. It is thoroughly endorsed by them.



Kilmer's Lawn Fence Pickets are made of extra heavy wire. We also manufacture Steel Top Rail, Steel Posts, Steel Gates, and Clevis Adjustable Cross Head, Arrow and Single Loop Hay Bale Ties.

THIS volume has been compiled from the extended series of articles in *The Iron Age*, on the arrangement of Hardware Stores, and contains a large and varied mass of information in regard to store arrangement.

A chapter is devoted to each subject and all are fully illustrated.

The summary of contents will convey an idea of the wide scope of the work, which treats of almost every subject connected with the arrangement of Hardware Stores.

Every hardware merchant should have a copy.

WEED'S IMPROVED CUT — GUARANTEE SEAL — ALL FILES ARE FULLY GUARANTEED — SPECIAL TEMPER

Manufacturers of

IMPROVED INCREMENT CUT FILES.

Arcade files are made from the very best Crucible File steel, and are guaranteed to cut faster and wear longer than any on the market.

PRICES: While we do not compete with the cheap Brands made from open hearth steel, we can, owing to our modern plant and new inventions, make prices that are the lowest for Buyers desiring a high grade File with an Improved Increment Cut.

"Imitation is the Sincerest Flattery." Others can imitate our SEAL, but not our IMPROVED INCREMENT CUT.

THE ART OF SELLING.

By F. B. GODDARD. 12mo. Flexible Cloth, 50 Cents.

In this book the author lets the reader into the secrets of the accomplished and successful salesman, illustrates his tact and finesse, and tells how he masters men: but beyond this, the work embraces much information which will be instructive and useful to all classes of business men. Besides suggestions to buyers, it contains chapters on "Changes in Business Conditions and Methods." "Salesmen's Compensation." "Retail Merchants and Salesmen," "Saleswomen," "How to Read Character," with a collection of clearly and tersely put important Legal Principles and Decisions Governing Sales. Sent, post-paid, upon receipt of price, by

THE TOLER

Liquid Door Check and Spring.

PERFECTION ATTAINED AT LAST.

Entirely new in style and mechanism, **strong, simple and effective**, giving in results all the best achievements of other checks, together with new and valuable features only to be found in this.

It has a vertical case, with openings only at the top.

It has no plugs or caps screwed to the cylinder ends. It cannot leak. There is no way for the liquid to escape after the Check is applied.

The piston is idle during a greater part of the opening and closing of the door, thus saving the wear on all parts.

It is made of the very best of material throughout.

It works to perfection, closing the door quickly and gently.

It is easily taken apart by anyone; no returning to the factory for anything. This saves time and money. The working of the Check will speak for itself.

Regular finish, Gold Bronze. No extra price for Silver Bronze or Dead Black when so ordered. Furnished Plated in Brass, Nickel, Copper or Silver, Plain or Oxidized, at a reasonable extra charge. No extra charge for Brackets where needed.

Manufactured by

SNOW WIRE WORKS,

Established 1834. Rochester, N. Y.

GLIDDEN'S METALLIC REPAIR OUTFIT

The one that has the Hinged Plugs.

THIS is the smallest, neatest, most compact and practical repair outfit ever offered to the public. Complete in a tin box 1½ inches long 1 inch wide and ¼ inch thick. It will repair a puncture at once, without the use of cement, and any woman or child can use it. The plug is made of metal with a **hinged head, which can be forced into a much smaller opening than one with a stationary head.** Two sizes of plugs are furnished with each kit, which will fit ordinary punctures; also a cutter is furnished, to be used when the puncture is too small to admit the plug.

Directions for use. Place the flat plate of the plug so it will be loose on the key. Screw the key into the plug and insert into the hole, leaving the flat plate on the outside of tire. Draw back the key so that the plug will rest flat on the inside of the tire. Screw the flat plate to plug with wrench (left hand thread), and turn key to right. Remove the key by turning to left, and you have a permanent repair which does not injure the tire or its looks.

DISCOUNT TO THE TRADE, ASK YOUR JOBBER FOR IT.

Also Manufacturer of

Palmer's Crinoline Dress Linings,
Canopies,
Mosquito Nettings,
Hammock Accessories,
Window Screen Cloth,
Etc.

The above figure represents a reclining position in an Adjustable Hammock Support as used indoor. This support may be extended or contracted. The Seat may be lowered or raised by the adjustment of the side cords where attached to the seat.

This Support is adapted to Lawn, Veranda and *Indoor* use, and like the Trapeze Suspension, is adjustable to different sizes of Hammocks within its scope (from 6 ft. 3 in. to 11 ft.), and to giving different degrees of dip and height from floor.

For indoor summer or winter use, it will appeal to all who are inclined to ease and comfort as it can be taken from a closet, set up, and Hammock hung ready for use in one minute.
